Re: Operable Unit-3 Construction Completion Report
Anniston PCB Site (docket No. 1:02-cv-0749-KOB)
Anniston, Alabama

Dear Ms. Langston Scully:

Pharmacia LLC (formerly Pharmacia Corporation) and Solutia Inc. ([Solutia], collectively, P/S) have substantially completed Remedial Action (RA) construction activities in accordance with the Interim Record of Decision (IROD) for Operable Unit-3 (OU-3), dated September 29, 2011, and the Statement of Work (SOW) attached to the Consent Decree (CD) (Docket No. 1:02-cv-0749-KOB). The Prefinal Construction Inspection Report was submitted on May 4, 2017.

The attached Construction Completion Report documents the construction activities and quality assurance performed. Construction Record Drawings documenting the final as-built condition are included in the report.

An anticipated date for the Final Inspection cannot be set at this time as construction activities are not yet complete. The seep interceptor trench and Carbon Treatment System No. 3 (CTS No. 3) are currently being installed. Additionally, the connection (and associated pipe rerouting) to the Anniston Water Works and Sewer Board system for the discharge of treated groundwater from all three new carbon treatment systems will be completed upon the Alabama Department of Environmental Managment's approval of P/S's State Indirect Discharge (SID) permit.

An addendum to this report will be forthcoming upon completion of these remaining items. P/S will notify EPA when these final items have been addressed so that the Final Inspection can be scheduled.

P/S are continuing to work with the EPA to identify the probable source of the seep. On December 5, 2017, P/S and the EPA held a teleconference to discuss a revised path forward for the seep investigation study. P/S are currently preparing a new work plan for this investigation.

Please do not hesitate to contact me at 256-231-8404 if you have any questions or need additional information.

Sincerely,

E. Gayle Macolly Harris
Manager, Remedial Projects

ENGINEERING CERTIFICATION

Golder Associates Inc. (Golder) was retained by Pharmacia LLC and Solutia Inc. (collectively, P/S) to provide Construction Quality Assurance (CQA) services during the implementation of the remedial action (RA) construction activities for Operable Unit 3 (OU-3) of the Anniston PCB Site in Anniston, Alabama. These services included the quality assurance monitoring, documentation, and/or testing of the items listed below:

- Subgrade preparation and placement of subgrade grading layer;
- Installation of the 40 thousandths of an inch (mil) (nominal) thick textured high density polyethylene (HDPE) geomembrane;
- Installation of the geocomposite drainage layer;
- Placement of the cover soils and topsoil;
- Placement of the dense graded aggregate (DGA) geocell-reinforced cover system;
- Installation of the concrete cover systems;
- Installation of the stormwater management features;
- Modifications to the groundwater extraction system; and
- Installation of Security Fences.

Based on the field observations, submittal information from the contractor, field testing results, and the data presented herein, it is the professional opinion of Golder that the RA construction activities for OU-3 of the Anniston PCB Site were performed in substantial conformance with the Remedial Design as referenced herein. Modifications that were made during the RA to the Final Remedial Design and the RA Work Plan are discussed in Section 7 of the Construction Completion Report along with why each of these changes was made.

GOLDER ASSOCIATES INC.

1.0 INTRODUCTION

1.1 Overview

Golder Associates Inc. (Golder) prepared this Final Construction Completion Report (Construction Report) on behalf of Pharmacia LLC (formerly Pharmacia Corporation) and Solutia Inc. (Solutia) (collectively, P/S) in accordance with the Consent Decree ([CD] Docket No. 1:02-cv-0749-KOB) between the U.S. Environmental Protection Agency (EPA) and P/S, entered into the U.S. District Court for the Northern District of Alabama (the Court) on April 17, 2013. The CD and the attached Statement of Work (SOW) required P/S to implement a remedial action (RA) for Operable Unit-3 (OU-3) of the Anniston Polychlorinated Biphenyl (PCB) Site (Site) in accordance with the Interim Record of Decision (IROD), dated September 29, 2011 (USEPA, 2011). In addition to the CD and SOW, the RA was implemented in accordance with the Design Criteria and Final Remedial Design (RD) Report submitted to the EPA on January 28, 2015 (Golder, 2015a). The Final RD includes the final design drawings and Technical Specifications that were used to implement the RA. A Draft Remedial Action Workplan (RAWP) was developed to provide for the safe and efficient completion of the RA for OU-3. This report was submitted to the EPA on March 27, 2015, and the EPA approved the work plan with minor comments on April 30, 2015. The Final RAWP was submitted on June 5, 2015 and addressed the comments from the EPA (Golder, 2015b).

This Construction Report was developed in accordance with Task 3 – Remedial Action, Section 7.0 of the SOW, which states that a Final Construction Report shall be submitted to the EPA within 60 days following conclusion of the Final Construction Inspection. According to the SOW, the Final Construction Report shall include, at a minimum, the following:

- Brief description of how outstanding items noted in the Prefinal Inspection were resolved;
- Explanation of modifications made during the RA to the original RD and RA Work Plans and why these changes were made;
- As-built drawings; and
- Synopsis of the construction work defined in the SOW and certification that the construction work has been completed.

The Prefinal Construction Inspection was conducted on February 14, 2017 and included representatives from the EPA, EPA Oversight Contractor, RD and RA Supervising Contractors, Construction Management Team, and the Certifying Engineer. A copy of the prefinal construction inspection report is included as Appendix A. As part of this inspection, the only deficiency in completed work noted by the EPA and P/S was the presence of a few shallow ruts in the soil cover in the northeast corner of Area A as a result of vehicular movement immediately following a period of rainfall. This was addressed by filling in the ruts with soil, lightly compacting the area, and reseeding.

In addition, it was acknowledged that work remaining to be completed includes remedial measures to fully address the seep area located at the PCB cells on the South Landfill and routing of treated water to final permitted Anniston Water Works & Sewer Board (AWWSB) discharge location(s). A summary of how these items have been addressed or are being addressed is included in Section 9.0.

1.2 Organization of the Final Construction Report

This Construction Report is organized and presented as follows:

Section 1.0 – Introduction

Introductory section with an overview of the Construction Completion Report.

Section 2.0 – Summary of Remedial Design and Selected Alternatives

Describes the selected remedy as presented in the Proposed Plan and IROD for the cover system and groundwater system components.

Section 3.0 – Project Organization and Preconstruction Activities

Provides a description of the project organizational chart and individuals involved with construction and a summary of preconstruction activities.

Section 4.0 – Construction Completion – Alternative S-D (Soil Capping Option 2)

Provides a description of the construction activities that were performed to complete the cover systems portion of the RA, and the CQA activities that were conducted to properly document these activities and demonstrate that the work was completed in compliance with the Final RD.

Section 5.0 – Construction Completion - Alternative GW-C (Expanded Groundwater Extraction with MNA)

Provides a description of the construction activities that were performed to complete the groundwater systems portion of the RA, and the CQA activities that were conducted to properly document these activities and demonstrate that the work was completed in compliance with the Final RD.

Section 6.0 – Summary of RA Construction Activities

Provides a monthly timeline of the RA activities and a bulleted description of the construction activities completed.

Section 7.0 – Changes to the Final RD and RA Work Plan

This section describes modifications that were made during the RA to the Final Remedial Design and the RA Work Plan and discusses why each of these changes was made.

Section 8.0 – Remedial Action Construction Documentation

This section includes introductions to the various construction documents and records that were kept as part of routine construction management tasks.

Section 9.0 – Deficiencies and Work Remaining

This section includes a summary of the deficiencies that were noted during the prefinal inspection and describes how these deficiencies have been addressed. This section also describes remaining work.

Section 10.0 – Additional Considerations

This section provides a summary of Health and Safety related issues relevant to the construction effort, as well as an overview of the Operations and Maintenance Plan for OU-3 once the RA is complete.

Section 11.0 – References

A list of references mentioned in this report.

2.0 SUMMARY OF REMEDIAL DESIGN AND SELECTED ALTERNATIVES

OU-3 includes Solutia's manufacturing facility (Facility) and two former landfills (the West End Landfill and the South Landfill) as shown in Figure 2.1. The OU-3 selected remedy, as presented in the IROD, is illustrated in Figures 2.2 and 2.3 and includes the construction of a soil cap and additional impermeable covers in select areas, an expanded groundwater extraction system around the eastern and northern portions of the Facility, the installation of additional perimeter fencing, and implementation of additional institutional controls (ICs). Alternative S-D (Soil Capping Option 2) and Alternative GW-C (Expanded Groundwater Extraction with MNA) were proposed as the preferred alternatives in the Proposed Plan, and, together, they constitute the selected remedy to address contamination at OU-3 of the Anniston PCB Site. The IROD lists the following components as the selected remedy:

1. Installation of a Resource Conservation and Recovery Act (RCRA) Subtitle C cover system over Cells 1E, 2E, and 3E of the South Landfill;
2. Installation of impermeable caps over impacted soils in Areas A and E to eliminate dermal contact, minimize the potential for contaminants in soil leaching to groundwater, prevent erosion, and direct stormwater away from the impacted areas;
3. Installation of a soil cap over impacted soils in Areas C and D to eliminate dermal contact, prevent erosion, and direct stormwater away from the impacted areas (during the RD, this cover was modified to a dense graded aggregate [DGA] cover);
4. Installation of perimeter fencing in the northeast portion of the Facility and along the southern portion of the employee parking lot adjacent to Area H. Additional fencing along the south and west of the diversion berm was also included, although not required by the IROD;
5. Optimization and expansion of the existing groundwater corrective action system to provide further containment of groundwater near OW-21A and Area A (OW-10);
6. Pre-treatment of the extracted groundwater using a carbon filtration system and discharge of flow to the Anniston Publicly Owned Treatment Works (POTW);
7. Operation, monitoring, and maintenance of existing closures, groundwater corrective action systems, interim corrective measures (ICMs), final RA components, and ICs to ensure continued long-term effectiveness of the remedy;
8. Continued enforcement of the Excavation Permit Policy restricting excavations within OU-3; and
9. Implementation of additional ICs, including:
    - Execution of an OU-3 Environmental Covenant with the Alabama Department of Environmental Management (ADEM) to restrict land and groundwater use within OU-3 and the Northside and Eastside Areas (in the vicinity of monitoring wells OW-21A and OW-10).

Following issuance of the IROD, P/S identified elevated levels of PCBs adjacent to the recently constructed Autoclave Unit located within the Facility. Under EPA oversight, P/S developed a sampling plan and conducted delineation sampling. Results of the sampling indicated that soils to the north, south and east of the Autoclave Unit exceeded the Remedial Goal (RG) for PCBs (Golder, 2014). As a result, a RA was required in the area surrounding the Autoclave Unit to address these exceedances. A workplan

describing the proposed remedial action was submitted to the EPA on November 8, 2013, and it was approved by the EPA on November 18, 2013. Although this area was not identified in the IROD as requiring a remedy component, P/S have addressed this area as part of the RA activities.

2.1 Cover System Components (Alternative S-D, Option 2)

2.1.1 Area A

The selected remedy for Area A consists of an impermeable cap to eliminate dermal contact, minimize potential soil leaching to groundwater, prevent erosion, and to direct storm water away from the impacted area. The preferred capping option for the majority of Area A (northern grassy area) was a multi-layer cover system resulting in a grassed final surface, similar to the current existing conditions. The cover consists of the following layers (bottom to top):

- 40 thousandths of an inch (mil) double-sided textured high density polyethylene (HDPE) geomembrane on a prepared subgrade,
- Geosynthetic drainage layer consisting of a 200-mil HDPE geonet heat bonded on both sides to an 8 ounce polyester geotextile, and
- At least 18 inches of cover soil over the drainage layer. The upper 6 inches of cover soil is topsoil capable of sustaining short-rooted vegetation (grass).

The geocomposite drainage layer was installed to route water from the top of the geomembrane to a continuous rip rap outlet located along the northern, southern, and eastern edges of the capped area.

The gravel in the narrow strip west of the parking lot (southern portion of Area A) and much of the perimeter around Area A were covered with a 6-inch concrete cap. The concrete cap was constructed on the existing subgrade and the curb in this area was raised to match the top of grade for the new cap.

2.1.2 Areas C and D

The selected remedy for Areas C and D consists of installing a cover to eliminate dermal contact, prevent erosion, and to direct storm water away from the impacted area. P/S capped this area using 12 inches of DGA material reinforced with geocells. This cover system was selected over a traditional geotextile and soil cover, as proposed by the EPA, due to potential challenges with installing a traditional soil cover over the existing clean coarse gravel surface. This modification was approved by the EPA as part of the RD process. Prior to installing the 12-inch DGA cover, the existing coarse gravel was mixed with imported DGA material to infill the void spaces in the gravel and the blended material was compacted.

This DGA cover system will function similar to a traditional soil cover as the void space between particles in the DGA is small as a percentage of the total volume of material, similar to soil. This DGA cover reinforced with geocells will eliminate dermal contact and prevent erosion of the underlying soil.

Additionally, this type of cover system will reduce maintenance requirements following construction as periodic mowing of the area will not be required.

2.1.3 Area E

The selected remedy for Area E consists of an impermeable cap to eliminate dermal contact, minimize potential soil leaching to groundwater, prevent erosion, and to direct storm water away from the impacted area.

The cover for Area E consists of a multi-layer cap with a grassed final surface, similar to that constructed for Area A. In order to accommodate the cover system within the limited space requirements, a retaining wall extending approximately 24 to 48 inches above the current grades was constructed around the perimeter of Area E to maintain the cover thickness and to capture and control drainage from the cap. Water collected on top of the geomembrane is directed laterally to a perimeter drainage collection system installed along the concrete retaining wall. Water collected within this collection system is routed to an outlet located on the western side of Area E where it drains into the existing Facility stormwater system.

In addition to the geosynthetic cover system constructed within Area E, P/S constructed the foundation for a proposed control building that will occupy the southwest portion of Area E. As part of the control building construction activities, an 8-inch thick concrete foundation was constructed and a minimum 6-inch thick concrete cover was placed over the remaining portion of Area E adjacent to the control building foundation.

2.1.4 South Landfill PCB Cells

As part of the selected remedy for OU-3, a RCRA Subtitle C-compliant cap was constructed in the area occupied by the former PCB cells (1E, 2E, and 3E). The cover system included a 40 mil HDPE geomembrane overlain by a geosynthetic drainage layer (geocomposite) and at least 18 inches of soil, similar to the cover system constructed for Area A. The upper 6 inches of the cover soil consists of topsoil capable of sustaining short-rooted vegetation (grass). The geocomposite drainage layer routes water from the top of the geomembrane laterally to a continuous rip rap outlet around the perimeter of the cover system.

2.1.5 Autoclave Unit Area

Following issuance of the IROD, P/S identified elevated levels of PCBs adjacent to the recently constructed Autoclave Unit. The RA for the Autoclave Unit Area consisted of the removal of approximately 12 inches of impacted soil at the surface and replacement with DGA to provide a stable base, and the construction of a 6-inch thick concrete cover (Golder, 2014).

The surrounding grades of the existing concrete infrastructure were matched with the new cover to maintain drainage patterns and prevent trip hazards in this heavily trafficked part of the Facility. Although this area was not identified in the IROD as requiring a remedy component, P/S constructed a concrete cover over this area as part of the RA activities.

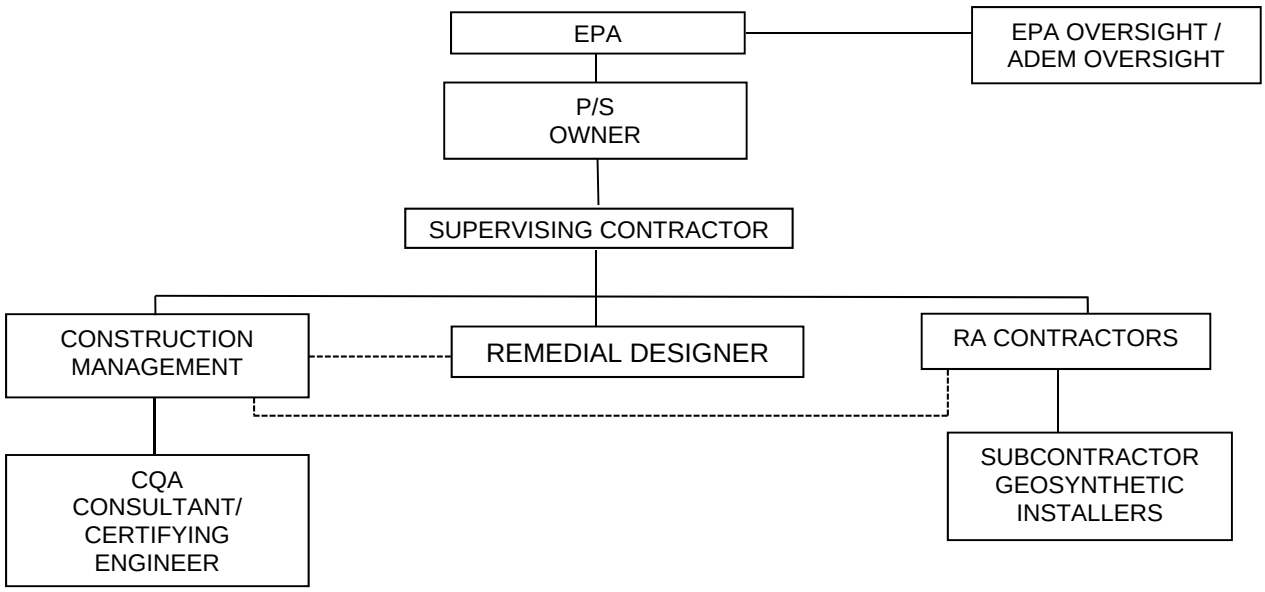
2.2 Groundwater System Components (Alternative GW-C)

The groundwater remedy builds upon the existing groundwater extraction system active at the Site by extending the system in the vicinity of two groundwater impact areas identified near wells OW-21A and OW-10. Two extraction wells were installed in each of the groundwater impact areas (IW-26 through IW-29). The location and spacing of these wells was determined as part of the PDI effort using newly obtained and existing hydrogeologic data.

Pumping systems were installed within each well. The pumping cycle (on/off) for each pump is controlled automatically based on the actual water level in the wells. The wells were equipped with dedicated level sensors and pump controllers. The level sensors for each well were individually set to maintain hydraulic control at and down gradient of OW-10 and OW-21A. The flows from wells IW-26 and IW-27 (adjacent to OW-21A) are measured with a new totalizing flow meter dedicated to these two new wells. While the flows from wells IW-28 and IW-29 (adjacent to OW-10) are combined with the flow from existing well IW-14A and measured with a new totalizing flow meter dedicated for these three wells.

Extracted groundwater undergoes pretreatment using activated carbon, which was designed based on the measured groundwater concentrations from the PDI and the baseline groundwater monitoring event. Separate carbon treatment systems, CTS #1 and CTS #2, were installed for the two groundwater impact areas identified near wells OW-21A and OW-10, respectively.

Treated groundwater from wells IW-26 and IW-27 will be pumped to an existing sanitary sewer manhole located north of the Facility. From the existing manhole, the accumulated groundwater will then be discharged to the City of Anniston POTW[1]. Treated groundwater from wells IW-28 and IW-29 is pumped to an existing lift-station and then discharged to the City of Anniston POTW via Basin 5/6. P/S have an existing State Indirect Discharge (SID) permit for the discharge of effluent from this outfall (Basin 5/6) that allows for the discharge of extracted groundwater.



[1] Due to permitting issues with the Anniston Water Works and Sewer Board, water from CTS #1 is currently stored in a temporary frac tank and hauled to the Facility's permitted sanitary sewer discharge for disposal of the treated water.

3.0 PROJECT ORGANIZATION AND PRECONSTRUCTION ACTIVITIES

3.1 RA Project Organizational Structure

Figure 3.1 below shows the organizational structure for the RA project.

Figure 3.1: RA Project Organizational Structure

The parties involved in the design, construction and oversight of the cover systems and groundwater systems components, included:

- EPA Oversight
  - Ms. Pamela Langston Scully, P.E., Remedial Project Manager
  - Mr. Tim Turner, Lead Oversight Contractor (J.M. Waller / Versar)
  - Mr. Terence Chuhay, Oversight Contractor (J.M. Waller / Versar)
- ADEM Oversight
  - Mr. Metz Duites
  - Mr. Austin Pierce
- P/S, as the Owner
  - Ms. E. Gayle Macolly Harris, Remedial Project Manager
  - Mr. Johnnie Pearson, Engineering
  - Mr. Michael Price, appointed by P/S as the Supervising Contractor for RA Work (Genesis Project Inc.)
  - Mr. John Loper, P.E., appointed by P/S as Supervising Contractor for RD Work (Loper Group Inc.)

- P/S Construction Management
  - Mr. Donn Williams (Williams Service, Inc.)
  - Mr. Joshua Threadgill (Genesis Project, Inc.)
- Golder Associates Inc., Design Engineer, Certifying Engineer, and CQA Consultant
  - Mr. Steven Moeller, P.E., Lead Design Engineer and Certifying Engineer
  - Mr. Patrick Callahan, P.E., Design Engineer and CQA Field Leader
  - Mr. Andrew Fuggle, Design Engineer and CQA Field Member
  - Mr. Nortey Yeboah, CQA Field Member
  - Mr. Shawn Casey, Geosynthetics and Soils CQA Technician
- Taylor Corporation, RA Contractor for the Cover Systems Project
  - Mr. Lance Taylor, Owner
  - Mr. Ellis Bennett, Project Manager
  - Mr. Jason Joiner, H&S Representative
  - Mr. Mile' Lilio, H&S Representative
  - Plastic Fusion, Geosynthetics Installer (as subcontractor to Taylor Corporation)
- Golder Associates Inc., RA Contractor for the Groundwater Systems Project
  - Taylor Corporation, Lead Subcontractor to Golder
  - Cascade Drilling LP

3.2 Preconstruction Conference

P/S conducted a preconstruction conference on June 8, 2015 before initiation of construction that included the EPA, the EPA Oversight Contractor, ADEM, P/S, P/S construction management team, Golder, and Taylor Corporation. The following topics were addressed at the meeting:

- Define the roles, relationships, and responsibilities of all parties;
- Review methods for documenting and reporting inspection data;
- Review methods for distributing and storing documents and reports;
- Review work area security and safety protocols;
- Review the construction schedule; and
- Conduct a Site reconnaissance to verify that the design criteria and the plans and Technical Specifications are understood and to review material and equipment storage locations.

The preconstruction conference was documented, including the names of people in attendance, issues discussed, clarifications made, and special instructions issued. The meeting notes from the preconstruction conference are included in Appendix A.

3.3 Initial RA Activities

The RA Contractors (Taylor and Golder) prepared and submitted a Contractor Health and Safety Plan/Contingency Plan, Air Monitoring Plan, and Spill Control and Countermeasures Plan. These documents were prepared and submitted to the EPA prior to the RA Contractor mobilizing to the Site. The EPA reviewed the plans to ensure that all necessary elements were included, and that the plans provided for the protection of human health and the environment.

Following the preconstruction conference and submittal of the initial planning documents, the RA Contractor mobilized to the Site and began the installation of temporary facilities such as construction trailers, staging areas, security fencing, equipment decontamination facilities; and the installation of erosion and sediment controls around the areas to be disturbed. Detailed requirements for erosion and sediment control and construction best management practices (BMPs) were presented in the Construction Best Management Practices Plan (CBMPP) included in Appendix A of the RA Workplan. Implementation of the RA within any given work area was not authorized until erosion and sediment controls and BMPs were in place in accordance with the CBMPP.

The RA activities were conducted within Solutia's active facility, and all work was coordinated with P/S plant personnel and conducted in accordance with the facility's Environmental, Health and Safety policies.

4.0 CONSTRUCTION COMPLETION – ALTERNATIVE S-D (SOIL CAPPING OPTION 2)

The following provides a description of the construction activities that were performed to complete the cover systems portion of the RA and the CQA activities that were conducted to properly document these activities and demonstrate that the work was completed in compliance with the Final RD (Golder, 2015a).

The Final RD includes the final design drawings, Technical Specifications, and the Construction Quality Assurance Plan that were used to implement the RA. Details of the completed construction are documented in the Construction Record Drawings (Appendix B) and are referenced below. Additionally, construction photographs depicting the various stages of construction described below are included in Appendix C.

4.1 Waste Excavation and Disposal

Limited excavation of impacted soil was required prior to constructing the cover systems as part of the RA since the caps and covers were constructed above ground with clean imported fill material. However, excavation was required at the Autoclave Unit to remove the upper one foot of soil as required for the selected remedy and excavation was required around the perimeter of Area E for construction of the foundation for the retaining wall. The quantity of material removed from each of these areas was 461 and 67 tons of impacted soil, respectively.

In other portions of the Site, only incidental excavation was required as needed to construct the RA components. A listing of the waste manifests and the location of where the material was generated is included in Appendix D along with a copy of each manifest.

Characterization data were available to determine the proper disposal requirements for the soil excavated. The existing data and generator knowledge was used to determine the disposal procedures for the excavated materials. All soils excavated were contained (lined roll-off containers), staged, and transported to the Chemical Waste Management Facility in Emelle, Alabama, which is a Toxic Substances Control Act (TSCA) and an EPA-approved facility.

P/S notified the EPA prior to transporting soil generated from within OU-3 to an off-Site disposal facility so that the EPA could confirm that the disposal facility was in compliance with applicable federal and state landfill regulations.

4.2 Subgrade Construction Quality Assurance

The activities associated with construction of the subgrade for the different cover systems were monitored by Golder for compliance with the project specifications. This monitoring was required for the following areas:

- Geomembrane Cover Systems
  - Area A
  - Area E
  - PCB Cells
- DGA Geocell-Reinforced Cover
  - Areas C&D
- Concrete Cover System
  - Area A
  - Area E
  - Area H
  - Autoclave Unit

4.2.1 Geomembrane Cover Systems

For Area A, Area E, and the PCB cells, subgrade work included mowing the existing grass flush with the ground surface, applying herbicide to the area, and scarifying the remaining surface with a disc harrow. Soft or unstable areas identified as part of the subgrade preparation activities were addressed by placing a geotextile/gravel bridging layer over the area prior to placing compacted subgrade fill material. In accordance with Section 31 00 01, 2.2 of the Specifications, a 10 ounce per square yard (oz./yd^2) non-woven geotextile overlain by 8 inches of ALDOT No. 24 stone and 4 inches of DGA was used for the bridging layer. The location of the areas that required subgrade improvement/bridging are shown on Sheets 06 (Area A) and 08 (PCB Cells).

An approximate 6-inch thick layer of compacted soil was placed over the existing ground surface at Area A, Area E and the PCB cells. The volume of soil placed as subgrade material within each area is included in Table 1. The subgrade fill material was obtained from the on-Site Coldwater Mountain Borrow Area and the sampling/testing of this material is described in Section 4.4.2. During the placement of this soil layer, Golder personnel observed the soil for consistency and maximum particle size, and periodically measured the depth of the subgrade material.

Compaction of the subgrade layer was performed with a Sakai Pad Foot Roller and a Dynapac smooth drum roller. Field density tests were performed by Golder as required by the project specifications. A total of 27 compaction tests were performed during subgrade placement, which is approximately 2.25 tests per acre.

Table 2 includes a summary of the results of the density testing. As shown in the summary table, nine tests failed to meet the compaction or moisture requirements, but were re-tested once the areas were re-worked or re-compacted. The final subgrade surface was compacted and rolled with a smooth-drum roller such that the final surface was free of irregularities resulting from equipment traffic, rocks and

stones, or desiccation cracks. Appendix E documents the soil density testing for Area A, Area E, and the PCB cells.

Golder observed the subgrade preparation and final surface prior to the installation of the HDPE geomembrane for compliance with the surface preparation requirements of the project specifications. Golder and Plastic Fusion provided written approval of the subgrade prior to geomembrane installation by the liner crew. Subgrade Acceptance Forms for Area A, Area E and the PCB cells are included in Appendix E.

4.2.2 DGA Geocell-Reinforced Cover

Prior to placing the DGA Geocell-Reinforced Cover over Areas C & D, imported DGA material was blended with the existing loose gravel and compacted to provide a firm subgrade for construction of the 12-inch cap. Approximately 4,791 tons of DGA were used to prepare the subgrade as shown in Table 1. During the placement and compaction of this layer, Golder personnel observed the blending of this material into the existing subgrade gravel for consistency. Compaction of this subgrade layer was performed with a sheepsfoot roller and a smooth drum roller. Compaction testing of this layer was not required by the Specifications as the gradation of the material varied significantly based upon how well the material was blended. This layer was blended and compacted to provide a firm base for the overlying DGA cover system.

A reinforcing geotextile (Mirafi HP360 geotextile) was placed in the eastern portion of the Areas C & D (over an approximate 2,050 square foot area) to stabilize a soft subgrade area prior to construction of the cover system and placement of the geocells. The location of the area that required subgrade improvement/bridging is shown on Sheet 07(Area C/D).

4.2.3 Concrete Cover System

Prior to capping the Autoclave Unit with a 6-inch concrete cap, the existing gravel in the area was excavated down to 12 inches in depth and replaced with six inches of compacted DGA. Due to certain obstructions encountered during excavation, some isolated areas were only excavated 6 inches and the concrete cover was placed directly on the excavated surface. As shown on Table 1, approximately 461 tons of material was excavated and hauled off Site for disposal.

The DGA was compacted prior to pouring the concrete cap; however, since this area is located where the use of large construction equipment was not practical, smaller vibrating plate compactors were used to compact this 6-inch lift. Golder personnel observed the excavation activities and the compaction of the DGA layer. Compaction tests are included in Appendix P.

4.3 Geosynthetic Construction Quality Assurance

4.3.1 CQA Services

The CQA monitoring services for geosynthetic material testing and placement provided by Golder included:

- Sample procurement and conformance testing of the geosynthetic materials, including HDPE geomembrane, geosynthetic drainage layer (geocomposite), and geotextile material
- Review of the geosynthetic manufacturers' quality control (QC) certificates
- Visual examination and documentation of geomembrane panels during deployment
- Observation and documentation of geomembrane trial seams and evaluation of the test results
- Observation and documentation of both the fusion and extrusion welded geomembrane seams and seaming procedures
- Observation and documentation of geomembrane seam non-destructive continuity testing
- Performance of geomembrane destructive seam strength laboratory testing and evaluation of test results
- Observation and documentation of geomembrane, geocomposite and geotextile installation
- Observation and documentation of the protective cover, drainage system construction, including installation of the drainage pipes, associated geosynthetics, and rip rap/stone placed above the geomembrane material.

Detailed descriptions of each of the above monitoring duties are presented in the following sections. Copies of the geosynthetic materials inventory spreadsheet, geosynthetic manufacturers' QC certificates, laboratory conformance test results, field CQA data spreadsheets, logs, and geomembrane seam laboratory destructive test results for the geosynthetic components of the cover system are included in Appendices F through J as specified in the following sections.

4.3.2 Conformance Testing

Conformance samples of the geosynthetic materials utilized for the cover system were obtained from the manufacturing plants prior to delivery of the material to the Site. The material roll lists were provided to Golder prior to conformance sampling so that representative samples of the produced materials could be selected in accordance with the sampling frequency requirements of the project specifications. Golder also conducted an inventory of the geosynthetic materials upon arrival at the Site. Lists of the roll numbers of the delivered materials are presented in Appendix F (geomembrane) and Appendix G (geocomposite).

The following geosynthetic materials were delivered to the Site:

- 38 rolls of textured HDPE geomembrane (total of 598,500 square feet)
- 179 rolls of geocomposite drainage material (total of 596,965 square feet)

Details of the conformance testing for the geomembrane and the geocomposite drainage material are included in the sections below.

One roll of geomembrane delivered to Site, roll #108183107, was not previously included in a certification list. This roll replaced roll #108183102 which was not delivered. After review of the certification test data to ensure it met the requirement of the project specifications, Golder approved the use of geomembrane roll #108183107. The conformance testing performed for the Site is representative for this roll, as the roll number is sequential to the rolls tested.

Based on the specified testing frequency for conformance sampling, a total of seven samples of geomembrane and six samples of geocomposite were collected for conformance testing. The conformance sampling was carried out consistent with the requirements outlined in the project specifications. Additionally, samples from the subgrade layer and the soil cover layer were utilized with the geosynthetic materials for stability friction angle testing.

All samples were delivered to the Golder Laboratory for quality assurance testing to determine compliance with project and manufacturer's minimum specifications. The tests were performed in accordance with the standard test procedures defined by the American Society for Testing and Materials (ASTM) and/or as required by the project specifications. Conformance test results and the manufacturer's quality control test results demonstrated that the geomembrane and geocomposite drainage materials met the project specifications.

4.3.2.1 Geomembrane Conformance Testing

GSE Environmental, LLC (GSE) 40-mil double-sided textured HDPE geomembrane installed for the multi-layer cover systems was manufactured and supplied by GSE. The textured geomembrane rolls were generally 700 feet long by 22.5 feet wide.

Quality control testing was performed by GSE in accordance with project specifications, and GSE provided quality control certificates for the geomembrane rolls delivered to the Site. The quality control test results demonstrated that the material met the project specifications. The product data sheets and quality control certificates are included in Appendix F.

Quality assurance samples of the geomembrane were collected at the factory and shipped to Golder's laboratory to be tested for thickness, puncture strength, carbon black dispersion, density, carbon black content, tensile strength at break, tensile strength at yield, elongation at yield, and elongation at break. Additionally, the interface shear strength of the geomembrane material with adjacent materials in the

cover system were tested at a rate of one test per 10 acres of material delivered (2 tests total). The results of the interface shear strength tests indicated a friction angle for the cover system that was greater than required by the project specifications.

One test (on sample 10818-3086) was re-tested due to a failed initial test for elongation at yield. The corresponding re-test passed and met the project specifications. The quality assurance results for this material demonstrated that the geomembrane met the project specifications. Geomembrane laboratory testing results are presented in Appendix F.

4.3.2.2 Geocomposite Conformance Testing

The geocomposite drainage material (TN-240-2-8) was manufactured and supplied by Skaps Industries (Skaps). The geocomposite consists of a 200-mil HDPE geonet heat bonded to an 8 oz/sy nonwoven polypropylene geotextile on both sides of the geonet. Geocomposite roll dimensions were generally 230 feet long by 14.5 feet wide.

Quality control testing was performed by Skaps in accordance with the project specifications, and Skaps provided quality control certificates for the geocomposite rolls delivered to the Site. The quality control test results demonstrated that the material met the project specifications. Quality control certificates are included in Appendix G.

Quality assurance samples of the geocomposite were collected at the factory and shipped to the Golder Laboratory for testing. The following conformance testing was performed on selected rolls of the geonet and geotextile materials:

- Geonet Component:
  - Thickness
  - Adhesion Strength
  - Transmissivity
- Geotextile Component:
  - Mass/Unit Area
  - Puncture Strength
  - Grab Strength
  - Grab Elongation

The quality assurance test results demonstrated that the geocomposite samples met the project specifications. Geotextile conformance testing results are presented in Appendix G.

4.3.3 Manufacturers' Quality Control Certification Review

The manufacturers' QC Certificates for the geosynthetic materials delivered to the Site were submitted to Golder for review to check adherence to the project specifications. The review indicated that the QC test results shown on the final QC certificates met or exceeded the minimum physical/mechanical property requirements listed in the project specifications. Copies of the manufacturers' certificates and QC test results for the geomembrane rolls and geocomposite rolls are presented in Appendix F (geomembrane) and Appendix G (geocomposite).

4.3.4 Geomembrane Installation

4.3.4.1 Overview

The textured geomembrane and the geocomposite drainage layer were installed within the limits of Area A, Area E, and the PCB cells as shown on Sheets 06 and 08 of the Construction Record Drawings. The approximate quantities of each material installed are as follows:

- Textured 40-mil geomembrane – 504,627 square feet
- Geocomposite drainage material – 504,627 square feet

Table 1 provides a summary of material quantities including the approximate quantities utilized within each area of OU-3. Plastic Fusion installed both the geomembrane and the geocomposite drainage layer in general accordance with the project specifications and both installation processes are described in detail in the following sections.

Golder completed CQA forms to document deployment, trial welds, destructive tests, non-destructive tests, seaming information, and repairs for both the geomembrane and the geocomposite drainage layer installations, as appropriate. Field forms documenting the installation of the geomembrane are provided in Appendix H.

4.3.4.2 Geomembrane Deployment and Seaming

The geomembrane rolls were transported to the cover area for deployment using a JCB 300T skid steer with a brace and roller. The geomembrane was placed on top of the prepared subgrade by manually deploying the rolls. The geomembrane was deployed in panels generally running up and down the side-slopes across the entire cover area. The geomembrane panels were overlapped approximately 6 inches and welded.

During and immediately after deployment of each geomembrane panel, the sheet was visually examined by Golder personnel to ensure that the method of deployment did not cause damage to the geomembrane. Defects resulting from manufacturing, shipping, or deployment were repaired in accordance with Section 02 56 13, 3.1 of the Specifications. This process included observation of

geomembrane panel placement, panel alignment, panel overlap with adjacent panels, panel surface quality, and panel identification (roll and panel number assignment).

Golder assigned each geomembrane panel a unique panel number corresponding to the order in which it was deployed. Geomembrane liner panel deployment logs and panel layout drawings, documenting the rolls placed, are provided in Appendix H.

Generally, upon deployment of two adjacent panels, the panels were seamed together using the fusion welder (see seaming discussion below). Sand bags were used to temporarily anchor the outermost edge of the last geomembrane panel(s) installed each day until adjacent panels were installed and permanently seamed.

The principal seaming method employed by Plastic Fusion was the dual hot wedge fusion process. Plastic Fusion also used hand-held extrusion welders to weld cross-seams, make repairs, to reconstruct failed fusion seams, and to weld seams that were too short or irregular for the fusion welder, or areas that were difficult for the fusion welder to access.

Golder field personnel observed and documented seaming operations on a full-time basis. Monitoring during seaming included the observation of the seam area for cleanliness and absence of moisture and the monitoring of welding machine temperatures. All seams were observed for visual quality and seam completion. Observed imperfections were marked by either a Plastic Fusion technician or by Golder and were subsequently repaired. Seaming information recorded by Golder included seam number, seam section, ambient temperature, approximate start time, seaming device, seaming technician, pre-heat set or machine speed, digital set and indicator temperatures of the wedge or barrel nozzle, approximate welding length, and destructive sample number (if applicable). Monitoring of the seaming procedures also included observation and testing of trial welds and non-destructive and destructive seam testing; these procedures are discussed in the following sections. Seam monitoring data are also presented in Appendix H.

4.3.4.3 Trial Welds

Geomembrane trial seams were prepared by Plastic Fusion technicians prior to each seaming period for each technician and each machine. Trial seams were prepared for every type of material weld that would be encountered within that seaming period (i.e. fusion weld, extrusion weld). The following procedure was used to field evaluate trial seams:

- At least six test specimens were cut across the trial seam sample, each approximately 1-inch wide by 6 inches long;
- At least three specimens were tested in peel and three for shear strength using a field tensiometer;

- Hot wedge (fusion) seams were tested in peel on each track (inside/outside);
- The passing criteria for the peel test was a visual observation of a proper break and a tensile strength greater than or equal to the specified strength;
- If any of the specimens failed, adjustments were made to the welding equipment and a new trial seam was fabricated, and the test procedure was repeated; and
- Once a trial seam passed, the technician could proceed with the field seaming operations.

Golder personnel observed the trial seam testing, and no failures in the trial seam testing occurred during this project. The criteria for shear strength stipulated by the project specifications is that specimens shall yield at a strength equal to or greater than 80 pounds per inch (ppi) for fusion and extrusion seams. The strength criteria for peel adhesion stipulated by the project specifications is that specimens shall yield at a strength equal to or greater than 60 ppi for fusion welds and 52 ppi for extrusion welds. The geomembrane trial seam results are presented on the Geomembrane Trial Seams Logs provided in Appendix H. Figures depicting the codes used to classify the failure modes for both fusion and extrusion seam test specimens are also included in Appendix H.

4.3.4.4 Geomembrane Non-Destructive Seam Testing

Field geomembrane seams, patches, and repairs were tested by Plastic Fusion for continuity using air pressure (on double hot wedge seams) or vacuum (on extrusion seams) test procedures. Golder personnel observed and documented the non-destructive seam testing. The procedure for the air pressure test was as follows:

- Visually observe the integrity of the channel of the section of seam being tested;
- Seal both ends of the channel section to be tested;
- Insert the needle of the pressure gauge into the channel at one end of the seam;
- Inflate the channel to between 25 and 30 psi gauge pressure with an air compressor and stabilize air pressure for 5 minutes;
- Record the beginning and ending time and beginning and ending pressures;
- Maintain the gauge pressure for at least 5 minutes; if the pressure loss exceeded 2 psi, or if the pressure did not stabilize, the area was repaired and retested;
- Upon completion of the test, continuity in the channel was confirmed by releasing the air from the end of seam opposite the gauge; and
- Repair the ends of the seam by extrusion welding a patch over the affected area.

The vacuum test was used to nondestructively test extrusion-welded seams. The procedure was as follows:

- Connect the hose and vacuum box assembly to the vacuum pump;
- Wet a strip of seam approximately 4 inches wide by 2 feet long with soapy solution;
- Place the box over the wetted area;

- Close the bleed valve/open the vacuum valve;
- Force the box onto the sheet until a vacuum is established, as evidenced by a negative box pressure of approximately 5 psi;
- Examine the seam through the viewing window for a period of approximately 15 seconds for the occurrence of air bubbles;
- Record and mark the location of any leaks to be repaired;
- Close the vacuum valve/open the bleed valve; and
- Remove the box and continue the process.

Whenever non-destructive testing indicated repairs were necessary, the procedure was generally to make the repairs and repeat the test at the time of testing. A summary of the completed repairs is included in Appendix J. Seaming Logs documenting the welding of the geomembrane panels are provided in Appendix H, along with seam Testing Logs that document non-destructive seam testing.

4.3.4.5 Geomembrane Destructive Seam Testing

The project specifications required destructive testing at a frequency of one destructive test for every 500 linear feet of seam. A summary of the number of destructive field seams that were collected for the various areas is as follows:

- A total of 17 geomembrane seam samples were collected for destructive testing from approximately 7,254 linear feet of seam for Area A.
- A total of 2 geomembrane seam samples were collected for destructive testing from approximately 1,014 linear feet of seam for Area E.
- A total of 33 geomembrane seam samples were collected for destructive testing from approximately 15,777 linear feet of seam for the PCB cells.

Locations where destructive test samples were taken are shown on the Panel Layout Drawings included in Appendix H. At each destructive test sample location, two specimens were removed from each end of the sample and tested in the field by Plastic Fusion for failure mode and strength (same criteria as trial seams).

If one or more of the specimens failed testing in the field, the entire sample was considered a failure and no laboratory testing of the failed field sample was conducted. Retesting and repair procedures outlined in the project specifications were then followed. If all specimens passed field testing, the entire sample was cut out by Plastic Fusion. Each destructive sample was divided into three sections: one 12-inch section was retained by Golder for archiving, a second section (18 inches) was utilized for laboratory testing by Golder and the third (12 inches) was retained by Plastic Fusion. Laboratory samples were transported to Golder's Atlanta, Georgia laboratory for testing in accordance with the project specifications. Each destructive sample submitted to the laboratory was divided into ten 1-inch wide specimens, five for bonded seam strength (shear) testing and five for peel adhesion (peel) testing. For double track fusion

samples, both tracks were tested for peel adhesion, resulting in ten peel specimen test results for each fusion sample. The specified acceptance criteria for shear tests was that four of the five specimens must have yield strengths greater than or equal to 80 ppi, with failure not extending more than 10 percent into the weld. The criteria for peel tests was that four of the five specimens must have peel strengths greater than 60 ppi for fusion welds and 52 ppi for extrusion welds, with failure not extending more than 10 percent into the weld. In the event of failure of either of these criteria, the destructive sample was considered a failure in accordance with the project specifications. Of the (52) samples collected, all passed the strength and seam criteria required in the project specifications.

Seam destructive samples were designation “DSF” and “DX” for fusion and extrusion seaming methods, respectively. Summaries of the destructive test results are presented in Appendix I. Figures depicting the codes used to classify the failure modes for test specimens are included in Appendix I. The approximate locations of the destructive test samples are shown on the Panel Layout Drawings.

4.3.4.6 Defects and Repairs

The seams and non-seam areas of the geomembrane were examined for identification of defects, holes, blisters, undispersed raw materials, and any sign of contamination by foreign matter. When a defect was observed or detected, the following repair procedures were conducted:

- The seaming equipment used in the repair procedure had field trial seams approved prior to use;
- The surfaces were clean and dry at the time of the repair;
- Patches and caps extended at least 6 inches beyond the edge of the defect and the corners were rounded; and
- The repairs were vacuum tested and visually observed for continuity.

Defects in the geomembrane were repaired by Plastic Fusion in accordance with the project specifications. Golder personnel observed the repairs either during the repair procedure or after the repairs were made. Golder assigned each observed defect a unique alphanumeric code to ensure tracking of both the repair and the subsequent non-destructive test performed by Plastic Fusion. The alphanumeric codes are used throughout the CQA logs to reference defect or seam locations. The defect/repair logs prepared by Golder field personnel are included in Appendix J.

4.3.4.7 Penetration Boots

Any location that required a penetration of the geomembrane required a boot to be installed (e.g., power poles, wells, etc.). The boots were installed in a two part system. The first part consisted of a bottom sleeve of 40-mil HDPE geomembrane that was customized to fit around the diameter of the penetration. The bottom of the sleeve (apron) was then extrusion welded to the geomembrane surrounding the

penetration. Then the second part of the system included an HDPE sleeve inserted within the annulus of the apron and then secured with a fernco fitting to provide a flexible, water-tight seal.

4.3.5 Geocomposite Drainage Layer Installation

The geocomposite rolls were transported to the cover area for deployment using a JCB 300T skid steer with a brace and roller. The geocomposite rolls were placed directly on top of the geomembrane after seaming and testing of the geomembrane were complete. The geocomposite was deployed in panels generally running up and down the side-slopes across the entire cover area.

During deployment of the geocomposite rolls, the material was visually examined by Golder personnel to ensure that the method of deployment did not cause damage to the geocomposite. Defects resulting from manufacturing, shipping, or deployment were repaired in accordance with the project specifications. A summary of the completed repairs is included in Appendix J. Sand bags were used to temporarily anchor the geocomposite material installed each day until adjacent panels were installed and permanently seamed.

The geotextile component of the geocomposite panels were overlapped approximately 6 inches and continuously sewn together. The cross seams were also sewn together. Golder field personnel observed and documented sewing operations on a full-time basis.

4.3.6 Anchor Trench

An anchor trench was excavated at the upslope origination of the geosynthetics installed at the PCB cells to hold the newly installed geosynthetics in place. After the textured geomembrane and geocomposite were placed in the anchor trench and seaming was completed, the trench was backfilled with soil cover material.

4.4 Soil Cover Construction Quality Assurance

4.4.1 CQA Services

The CQA monitoring services for soil cover material testing and placement provided by Golder included:

- Sample collection and conformance testing of the subgrade material, cover soil, topsoil, and DGA material
- Observation and documentation of the placement of this material as cover system components
- Testing of the soil as the material was placed in the cover system including performing in-place density tests as required by the Technical Specifications
- Confirming the thickness of in-place material

- Observation and documentation of the protective cover, drainage system construction, including installation of the drainage pipes, associated geosynthetics, and rip rap/stone placed above the geomembrane material.

Detailed descriptions of each of the above monitoring duties are presented in the following sections. Copies of laboratory conformance test results, in-place density tests, and thickness verification measurements are included in Appendices K through Q, as specified in the following sections.

4.4.2 Sourcing And Conformance Testing

The Coldwater Mountain Trail (CMT) Borrow Area was used as the primary soil borrow source during the RA for the subgrade material and the cover soil. P/S conducted a borrow source investigation and determined that the materials available from this borrow area were suitable for use in the project; however, processing of the material (removing larger particles) was required in order to meet the maximum particle size requirements.

Prior to utilizing the borrow area, testing of the material for PCBs was conducted. Genesis Project Inc. collected two composite soil samples on April 25, 2011 from six test pits excavated from representative locations distributed across the CMT Borrow Area. The test results indicated low level PCB detections less than 1 milligram per kilogram. As previously discussed with the EPA, the use of soil from the CMT Borrow Area was determined to be acceptable for the implementation of the OU-3 RA. The approval letter from the EPA is included in Appendix U.

Conformance testing was performed on the fill material used for the subgrade layer and the soil cover layer above the geosynthetics. Bulk samples of soil were collected on July 22, 2015 from three test pits located within the CMT Borrow Area. Prior to testing, the material was screened to remove particles larger than 1-inch and uniformly mixed to create a representative sample. Testing was performed in accordance with project specifications by Golder's Atlanta geotechnical laboratory, and the data were reviewed for conformance with the project specifications. Conformance test results for the materials collected from the CMT Borrow Area are included in Appendix K along with the laboratory data sheets. All material was screened on-Site by Taylor to remove particles greater than 1 inch prior to placement.

The RA contractor proposed using an off-Site borrow source located in Oxford, Alabama to supply topsoil for the project. Taylor submitted two bulk samples of proposed topsoil material collected from a stockpile at the Oxford Recreation Complex. The material was transported to Atlanta, GA on May 28, 2015 for geotechnical testing by ATC Associates. Samples were tested for grain size distribution, pH, plasticity, and organic content. Results and laboratory data sheets are included in Appendix L. The initial testing of the topsoil material did not meet the requirements for organic content, but Taylor collected additional samples from another portion of the borrow area and the material had sufficient organic material consistent with the project specifications.

Prior to utilizing the borrow material from this off-Site source, testing of the material for PCBs was performed by Genesis Project, Inc. and conducted at a frequency of 1 test per 5,000 cubic yards of material supplied to the Site. The results of the tests performed showed no detections of PCBs. On July 16, 2015, P/S submitted an evaluation report requesting approval from the EPA for utilizing the Oxford Recreation Complex borrow pit as an off-Site borrow source for topsoil material for the RA project. The EPA approved the use of the borrow source on July 31, 2015. The approval letter from the EPA is included in Appendix U.

4.4.3 Soil Cover Installation

CQA monitoring was performed during the construction of the soil cover layer and vegetative cover layer in accordance with the project specifications. Golder observed the placement of the 12-inch thick soil cover layer and 6-inch thick vegetative cover layer over the geosynthetic cap to ensure that the geosynthetic components were not damaged during placement of the soil material. The quantity of cover soil and topsoil placed within each area is summarized in Table 1. Care was taken to minimize wrinkles during fill placement. The cover soil layer placed on top of the geosynthetics was placed with low ground-pressure equipment and lightly compacted, as required for access and stability and to support vegetation. Golder performed periodic gradation checks of the cover soils to confirm that the maximum particle size did not exceed 1 inch. The uppermost zone of the soil cover (topsoil layer) was scarified to provide a base for seeding and treated with fertilizer, as necessary.

Field density testing was not performed on the soil cover layer since the soil material was placed directly above the geosynthetic liner system and the use of heavy compaction equipment was prohibited. Golder performed visual depth checks of the soil cover layer and vegetative cover layers over the entire cover system. A review of the in-place depth checks indicate that the required cover thickness of 18 inches was achieved at all locations. As-built contours of the soil cover layer and the final surface are depicted on Sheets 06 and 08 of Construction Record Drawings. Cover thickness verification is documented in Appendix O.

Golder extended the timeframe for placing cover soil over the geocomposite at both the PCB Cells and Area A. At the PCB Cells, the extension was granted from November 20, 2015 to January 20, 2016 as a result of inclement weather and difficulties encountered excavating and processing soil from the borrow area. This extension was discussed on an on-going basis with the EPA and ADEM, who attended as available, during the weekly progress meetings. The contractor ultimately covered the geocomposite with temporary poly sheeting until cover soils could be placed. At Area A, the extension was granted from April 19, 2016 to May 13, 2016 as a result of inclement weather.

4.4.4 Perimeter Drainage System

As per the design, a drain system was installed around the toe of the cover systems in Area A, Area E, and the PCB cells to promote drainage of water collected in the geocomposite drainage layer. For Area A and the PCB cells, the drainage system consisted of a geotextile filter fabric and rip rap material placed directly above the geocomposite drainage system around the perimeter of the cover system. For Area E, the drainage system consisted of 4-inch perforated ADS piping, surrounded by No.57 crushed aggregate and a geotextile filter fabric. This drainage system was installed to discharge through an outlet pipe on the western side of Area E into the Facility's stormwater collection system.

4.4.5 Grassing

The surface of the final cover systems was grassed by Taylor using various ALDOT seed mixtures and fertilizers based upon the time of the year that the seed was applied. Prior to the placement of the seed, the topsoil was fertilized in accordance with the project specifications. Due to the drought conditions encountered upon completion of the project, Taylor was required to re-seed the areas multiple times before sufficient grass was established. For Area E, sod was used instead of seeding.

4.5 DGA Geocell-Reinforced Cover Construction Quality Assurance

4.5.1 CQA Services

CQA monitoring was performed during the construction of the DGA geocell-reinforced cover system in accordance with the project specifications.

4.5.2 Conformance Testing

The RA Contractor requested to utilize ALDOT "Type B" DGA in lieu of Type A as listed in the Technical Specifications due to the availability of the material. As the gradation requirements were not significantly different, the request was approved. Two bulk samples of DGA were supplied from Vulcan Material Company (14081-ALDOT 825 B) and tested for conformance with the project requirements. The particle size distribution was found to be slightly coarser than required and did not contain sufficient fines. The RA Contractor worked with the quarry to improve the mix and the material was re-tested. Although the fines content of the material sampled by Golder contained 0.7% less fines than specified by ALDOT (6.3% in comparison to a minimum requirement of 7.0%), the material was approved as this slight difference will not impact the performance of the cover system. The particle size distribution of this material in relation to the requirements of ALDOT Type B DGA is included in Appendix M along with the laboratory data sheets.

4.5.3 DGA and Geocell Installation

An approximate 6-inch thick layer of DGA was placed and compacted over the improved subgrade for Areas C & D. Approximately 7,560 tons of DGA material was imported to construct this lift of the DGA

cover system. During the placement of this DGA layer, Golder personnel observed the material for consistency and particle size distribution. Compaction of the DGA material was performed with a sheepsfoot roller and a smooth drum roller and field density tests were performed by Golder as required by the project specifications. A total of 11 compaction tests were performed, which is approximately three tests per acre. Table 3 includes a summary of the results of the density testing. As shown in the summary table, two tests failed to meet the compaction requirements, but were re-tested once the areas were re-worked or re-compacted. Appendix P documents the field density testing of the DGA in Areas C & D.

After the initial 6-inch layer of DGA material was placed, the RA Contractor installed the 6-inch geocells and filled the geocells with compacted DGA material. Golder personnel observed the placement and compaction of this material to ensure that the geocells were installed in accordance with the project specifications and were not damaged during installation. Additionally, Golder personnel observed the DGA material for consistency and that the material was adequately compacted.

The CQA representative monitored the placement and compaction of the DGA material and geocells to ensure that the material was properly compacted, but no compaction testing was performed due to the geocell material included within the layer that precluded testing of the layer.

The overall thickness of the DGA geocell-reinforced cover was measured by survey and a map showing the thickness of the layer is included in Appendix Q. The cover was measured to be a minimum of 12 inches thick.

4.5.4 Perimeter Toe Protection

As per the design, a rip rap protection layer was installed around the perimeter of Areas C&D to protect the cover system from erosion. The rip rap protection consisted of a geotextile filter fabric and rip rap material placed directly above the DGA cover around the perimeter of the cover system. During construction, it was noted that surface flow around the eastern side of Areas C&D was eroding the existing gravel surface outside the limits of Areas C&D. As a result, drainage improvements outside the limits of the cover system were made to include a rip rap lined channel along this edge of the cover system to convey surface water flow directed around Areas C & D.

4.6 Construction Aggregate Quality Assurance

Rip rap and #57 crushed aggregate were used in multiple areas as specified in the design. Conformance and quarry certifications are provided in Appendix N.

4.7 Concrete Construction Quality Assurance

Concrete work was required in the following areas:

- Autoclave Unit Area
  - Concrete cover
- Area A
  - Around vaults
  - Sidewalk in the northern and southern portions of the area
  - Curbing on the western side of the area
- Area E
  - Retaining walls and footings
  - Concrete cover in the northeast and northwest corners outside of the retaining wall
  - Control room building foundation and surrounding concrete cover

The concrete caps were a minimum of 6 inches thick and were constructed per Section 450 of the Alabama Department of Transportation Specifications. The caps were also constructed to meet plant requirements with regards to matching the existing grades for surrounding structures or adjacent improvements.

The concrete mix design originally called for 3,000 psi strength concrete reinforced with #4 rebar, which was used for the concrete to construct the cover system for the Autoclave Unit. However, following construction of the Autoclave Unit, 4,000 psi strength concrete was used for the remainder of the project. The mix design strength was increased to 4,000 psi based upon a low break reported in the Autoclave area that didn't achieve 3,000 psi at 28 days and to ensure that the design strength would be met sooner in order to expedite construction activities.

Table 4 provides a summary of the concrete break results. Laboratory break reports are included in Appendix R.

4.7.1 Autoclave Unit Area

The Autoclave Unit Area was capped with a 6-inch thick concrete cover. This area was previously covered with gravel. The gravel was removed down to 12 inches in depth (where possible) and replaced with 6 inches of DGA and 6 inches of concrete. However, concrete obstructions were exposed along the north side of the autoclave area during subgrade excavation. For this area, Taylor was directed to chip and demolish the obstructions to reach a minimum depth of 6 inches for construction of the concrete cover. The cover area is approximately 6,800 sf.

The DGA subgrade was compacted prior to pouring the concrete cap. As this area is located in a part of the Facility with limited access for heavy equipment, hand work, rammers and plate compactors were used to compact the DGA.

Prior to the RA Contractor completing the concrete pours in the Autoclave Area, the CQA Consultant reviewed the subgrade, forms, reinforcement, embedded items, and joints. Additionally, the CQA Consultant reviewed the CQC testing results from the concrete cylinders and determined whether the results met the requirements of the project specifications. The concrete strength tests are included in Appendix R.

One of the concrete break results from the Autoclave Unit Area indicated a value less than the project specifications required. The CQA consultant evaluated the potential impact to the cover system. Given the location and anticipated traffic loadings in the affected part of the concrete cover, the lower strength concrete is not expected to lead to any significant performance reduction of the cover in either the short- or long-term.

4.7.2 Area A and Area E

As shown on the Record Drawings, 6-inch thick concrete caps and concrete retaining walls were constructed in portions of Area A and Area E. The caps were typically poured in place on a prepared subgrade and the retaining wall sections were poured on top of an approximate 4-inch thick DGA subbase.

Prior to the RA Contractor completing the concrete pours in Area A and Area E, the CQA Consultant reviewed the subgrade, forms, reinforcement, embedded items, and joints. Additionally, the CQA Consultant reviewed the CQC testing results from the concrete cylinders and determined whether the results met the requirements of the project specifications. The concrete strength tests are included in Appendix R.

5.0 CONSTRUCTION COMPLETION - ALTERNATIVE GW-C (EXPANDED GROUNDWATER EXTRACTION WITH MNA)

The following provides a description of the construction activities that were performed to complete the groundwater systems portion of the RA and the CQA activities that were conducted to properly document these activities and demonstrate that the work was completed in compliance with the Final RD (Golder 2015a). The Final RD includes the final design drawings, Technical Specifications, and the Construction Quality Assurance Plan that were used to implement the RA. Details of the completed construction are documented in the Construction Record Drawings and are referenced below.

5.1 Waste Excavation and Disposal

Limited excavation of impacted soil was required as part of installing the groundwater portions of the RA. A total of 232 tons of impacted soil related to the groundwater portions of the work was removed and hauled off the Site (see Table 1). Excavation was mostly related to the installation of below ground piping. A listing of the waste manifests and the location of where the material was generated is included in Appendix D along with a copy of each manifest. Characterization data were available to determine the proper disposal requirements for the soil excavated. Existing data and generator knowledge were used to determine the disposal procedures for the excavated materials. All soils excavated were contained in lined roll-off containers, staged, and transported to the Chemical Waste Management Facility in Emelle, Alabama, which is a TSCA and an EPA-approved facility.

P/S notified the EPA prior to transporting soil generated from within OU-3 to an off-Site disposal facility so that the EPA could confirm that the disposal facility was in compliance with applicable federal and state landfill regulations. These notifications are included in Appendix U.

5.2 CQA Services

The activities associated with construction of the groundwater systems were monitored by Golder for compliance with the project specifications. This monitoring was required for the following:

- Interceptor well installation,
- Conveyance piping installation, and
- CTS installation.

5.2.1 Well Installation

Golder observed and monitored the installation of the four new interceptor wells that were installed as part of the RA. The wells were installed by Cascade Drilling LP, a licensed driller in the State of Alabama. Each interceptor well was constructed with a nominal 4-inch diameter PVC well casing and screening material. The screens extended from approximately 10 feet to 35 feet bgs for the two wells adjacent to OW-21A (IW-26 and IW-27) and 8 feet to 38 feet bgs for the two wells adjacent to OW-10 (IW-28 and IW-

29). The well screens were 6-slot screen to minimize the amount of fine material (silts and clays) that would enter into the well during pumping. The sand pack consisted of a 20/40 graded sand. The wells were fitted with a submersible pump and completed with flush-mount well vaults. Refer to Appendix S for the well installation logs for the four new interceptor wells and for details regarding the well development, pumps, controls and level switches.

5.2.2 Conveyance Piping

The conveyance piping between the interceptor wells, carbon systems, and discharge points was primarily constructed from single-wall HDPE piping and HDPE fittings. The discharge piping from the pumps within the interceptor wells to the HDPE conveyance lines was constructed of single-wall PVC pipe. Metal components, such as pit-less adapters and hose barbs, were utilized as required to complete the construction of the conveyance system. Golder monitored the installation of the conveyance piping system and hydrostatic pressure testing of the conveyance lines between the interceptor wells, carbon systems, and discharge points. Table 5 provides a summary of the hydrostatic pressure testing of the conveyance lines.

5.3 Carbon Treatment Systems (CTSs)

Extracted groundwater from the four interceptor wells is routed to pretreatment systems using activated carbon. Separate pretreatment systems were constructed for the two groundwater impact areas identified near wells OW-21A and OW-10. Schematics of the pretreatment systems are shown on Sheet 18 of the Construction Record Drawings. It is planned for treated groundwater from wells IW-26 and IW-27 to be pumped to an existing sanitary sewer manhole located north of the Facility. From that existing manhole the accumulated groundwater will be discharged to the City of Anniston POTW. The AWWSB and P/S are finalizing negotiations related to the Site's SID permit and alternative manhole discharge locations. Consequently, the treated groundwater is currently being stored in a temporary frac tank and hauled to the Facility's sewer connection with the AWWSB (permitted discharge point DSN-002).

Treated groundwater from wells IW-28 and IW-29 is pumped to an existing lift-station and then routed to the City of Anniston POTW via SID discharge location DSN-002. The current discharge configuration for CTS #1 represents an interim discharge configuration while permitting for the planned AWWSB manholes is completed. Upon approval of the final discharge locations and completion of remaining construction activities, an addendum to this report will provide documentation of the final piping and discharge details.

The carbon systems were installed using a lead-lag configuration for the two granulated activated carbon (GAC) vessels in each system. An analysis was performed to size the GAC vessels and Carbonair Model PC-3F pressurized vessels were selected. Each vessel has a carbon capacity of 250 pounds. Each carbon treatment system includes two GAC vessels, which are installed in series in a lead-lag configuration. Breakthrough of the carbon systems will be monitored as indicated in the O&M manual to

manage the discharge of contaminants from the systems. Refer to Appendix T for details regarding the GAC vessels and associated equipment included in each carbon treatment system.

6.0 SUMMARY OF RA CONSTRUCTION ACTIVITIES

This section provides a monthly timeline of the RA activities and a bulleted description of the construction activities completed. A photographic log of each month's construction activities is included as Appendix C.

6.1 June 2015

- RA Contractor approval on June 5, 2015
- Preconstruction conference on June 8, 2015
- RA public meeting on June 8, 2015
- RA Contractor mobilized to Site on June 24, 2015

6.2 July 2015

- Prepared subgrade for PCB cells
- Cleared the CMT Borrow Area

6.3 August 2015

- Excavated impacted soil at the Autoclave Unit Area and partially backfilled the area with DGA
- Scarified and compacted the subgrade for the PCB cells
- Prepared the borrow area: installed erosion controls, cleared and chipped vegetation, and stockpiled topsoil

6.4 September 2015

- Constructed the 6-inch reinforced concrete cover over the Autoclave Unit Area
- Developed the borrow area further and screened borrow soils
- Hauled subgrade material to the PCB cells
- Placed subgrade soil in the southwest portion of the PCB cells and then progressed to the north and east
- Began grading Area A for the concrete cover system to be installed in the southeastern portion the area
- Began excavating for the retaining wall footing in Area E, placed DGA beneath the footing elevation, and installed formwork for the footing and wall

6.5 October 2015

- Developed the borrow area further and screened borrow soils
- Completed the subgrade preparation for the PCB cells including smooth drum rolling of the area
- Completed deployment and seaming of the HDPE geomembrane for the PCB cells and began installing the geocomposite drainage layer
- Began installing the Site fencing and pouring the concrete cover located around the perimeter of Area A
- Installed formwork and began pouring sections of the footing and retaining wall in Area E

- Began blending DGA into the underlying gravel material present on the existing subgrade in Areas C and D

6.6 November 2015

- Processed and stockpiled soil from the borrow area
- Completed deployment and installation of the geocomposite drainage layer for the PCB cells
- Began placing cover soils over the geocomposite drainage layer for the PCB cells
- Installed the Site fencing and completed pouring the concrete cover located around the perimeter of Area A
- Installed formwork and poured sections of the concrete footing and retaining wall in Area E
- Completed blending DGA into the underlying gravel material present on the existing subgrade in Areas C and D
- Began placing DGA and geocells for the 1-foot DGA cover in Areas C and D

6.7 December 2015

- Processed and stockpiled soil from the borrow area
- Placed cover soils and began placing topsoil over the geocomposite drainage layer for the PCB cells
- Completed installing the Site fencing around the perimeter of Area A and in the northeast corner of OU-3 (north of Area A)
- Installed formwork and poured sections of the concrete footing and retaining wall in Area E
- Placed DGA and geocells for the 1-foot DGA cover in Areas C and D, and installed rip rap armor around the perimeter

6.8 January 2016

- Processed and stockpiled soil from the borrow area
- Placed cover soils and topsoil over the geocomposite drainage layer for the PCB cells
- Installed rip rap around the perimeter of the PCB cells
- Placed grass seed and mulch over the southern portion of the PCB cells
- Began installation of the Site fencing along the southern boundary of the South Landfill (south of the PCB cells)
- Began excavating and placing DGA for the retaining wall footings located around the existing concrete vaults in Area A
- Began preparing Area A for construction of the cover system
- Completed installation of the rip rap armor around the perimeter of Areas C and D
- Installed formwork and poured sections of the concrete footing and retaining wall in Area E
- Installed CTS building enclosure and well vaults for wells IW-26 and IW-27 located north of the facility

- Began installing conveyance piping for wells IW-26 and IW-27

6.9 February 2016

- Processed and stockpiled soil from the borrow area
- Completed placing cover soils and topsoil over the geocomposite drainage layer for the PCB cells
- Installed rip rap around the perimeter of the PCB cells
- Constructed the permanent access road over the PCB cells
- Installed Site fencing south of Alabama Highway 202 (around perimeter of the borrow area)
- Formed and poured concrete for the footings and retaining walls located around the existing concrete vaults in the eastern portion of Area A
- Began placing DGA for the footing and concrete pad around the vaults in the southwest portion of Area A
- Formed and poured concrete for the footings for the retaining walls located around the existing concrete vaults in the southwest portion of Area A
- Continued preparing Area A for construction of the cover system
- Installed bollards and poured the concrete pad at the northwest corner of Area E
- Continued installing formwork and pouring sections of the concrete footing and retaining wall in Area E (completed the wall with the exception of a 45-foot section that will remain open for construction access)
- Installed internal piping within CTS enclosure and pumps for wells IW-26 and IW-27 located north of the facility
- Continued installing conveyance piping for wells IW-26 and IW-27

6.10 March 2016

- Processed and stockpiled soil from the borrow area
- Completed installation of rip rap around the perimeter of the PCB cells (with the exception of the northeast corner, which will remain incomplete until the seep area is addressed)
- Completed construction of the permanent access road over the PCB cells
- Completed vegetating the cover over the PCB cells
- Completed installation of the Site fencing south of Alabama Highway 202 (around perimeter of borrow area)
- Formed and poured concrete for the retaining wall and concrete cover around the existing concrete vaults in the southwest portion of Area A
- Continued preparing Area A for construction of cover system, placed and compacted subgrade soil in Area A
- Placed and compacted subgrade soil in Area E
- Deployed and installed the geomembrane cover for Area A and Area E
- Deployed and installed the geocomposite drainage layer for Area E
- Deployed and began installation of the geocomposite layer for Area A

- Began placing cover soils over the geocomposite drainage layer for Area E
- Completed installation of conveyance piping for wells IW-26 and IW-27
- Completed installation of the casings for the groundwater conveyance piping in the northeast and southeast corners of Area A

6.11 April 2016

- Processed and stockpiled soil from the borrow area
- Completed installation of the geocomposite drainage layer for Area A
- Began placing cover soils and topsoil over the geocomposite drainage layer for Area A
- Began installation of conveyance piping in Area A
- Completed placing cover soils and topsoil over the geocomposite drainage layer for Area E (with the exception of the southwest corner)
- Constructed the perimeter drain around Area E (with the exception of the southwest corner)
- Installed sod over the topsoil in Area E (with the exception of the southwest corner)
- Formed and poured concrete for the remaining portion of the retaining wall in the southwest portion of Area E

6.12 May 2016

- Processed and stockpiled soil from the borrow area
- Completed placing cover soils and topsoil over the geocomposite drainage layer for Area A
- Completed installation of conveyance piping and conduit in Area A
- Completed placing perimeter riprap and riprap check dams in Area A
- Placed grass seed, fertilizer and mulch over the soil cover in Area A
- Set junction boxes in the southeast and northeast corners of Area A
- Installed the vaults for the two interceptor wells in Area A
- Set CTS enclosure in Area A
- Completed placing cover soils and topsoil over the geocomposite drainage layer for Area E (including the southwest corner)
- Completed the perimeter drain around Area E (including the southwest corner)
- Completed installing sod over the topsoil in Area E (including the southwest corner)
- Constructed slab on grade and installed new fence in Area H
- Extended riprap in perimeter ditch on southeast side of Areas C and D

6.13 June 2016

- Began re-grading of the borrow pit to establish the final grades in accordance with the restoration plan
- Continued maintenance and watering of the vegetative cover layers in Areas A and E

6.14 July 2016

- Completed re-grading, placing topsoil, and hydroseeding of the borrow pit to establish final grades and vegetation in accordance with the restoration plan

6.15 August 2016

- Completed excavation for the additional curb on the western side of Area A
- Completed additional concrete curbs on the western side of Area A
- Completed minor surface water drainage improvements in Areas C and D

6.16 September 2016

- Completed soil backfill and sod installation behind the new concrete curb/slab additions in Area A
- Backfilled the sediment basin at the Coldwater Mountain borrow source
- Continued working to establish a healthy stand of grass in Area A and at the PCB cells
- Installed conveyance piping north of Area A for the RA groundwater system and the Solid Waste Management Unit 1 (SWMU 1) modifications

6.17 October 2016

- Continued working to establish a healthy stand of grass in Area A and at the PCB cells

6.18 November 2016

- Continued work to establish a healthy stand of grass in Area A and at the PCB cells
- Preparation and design for the control room building foundation slab in Area E

6.19 December 2016

- Continued installing mechanical, electrical and instrumentation components for CTS #1 and #2
- Connected CTS #1 to frac tanks in order to operate the system on a temporary basis until discharge permits are finalized
- Continued work to establish a healthy stand of grass in Area A and at the PCB cells
- Began pouring the foundation slab for the control room building in Area E

6.20 January 2017

- Completed installation of piping from CTS #2 to discharge piping located near IW-14A
- Installed mechanical, electrical and instrumentation components for CTS #2
- Completed startup and commissioning of CTS #1
- Completed pouring Area E cover/control room foundation slab and surrounding concrete cover
- Established a healthy stand of grass in Area A and at the PCB cells

6.21 February 2017

- Completed startup and commissioning of CTS #2

- Completed the pre-final construction inspection with the EPA on February 14, 2017 (see Appendix A)

7.0 CHANGES TO THE FINAL RD AND RA WORK PLAN

This section describes modifications that were made during the RA to the Final RD and the RA Work Plan and discusses why each of these changes was made. Appendix U provides the relevant correspondence with EPA related to these items.

7.1 Cover System Components

7.1.1 Area A

- An underground drainage pipe located on the northwest end of Area A was identified during construction and subsequently removed (excavated) prior to constructing the cover system. The pipe was removed as it posed a risk to damaging the overlying geosynthetic cap.
- The cover system around the vault/pump station located on the western portion of Area A was modified in order to accommodate construction of the cover system around existing Site features. The design modification replaced a portion of the geomembrane cover with a six-inch concrete cap. The concrete cover was constructed in accordance with the same requirements specified for the concrete pad around the perimeter of Area A. A short retaining wall was added to the design around a portion of the vault/pump station perimeter so that the geosynthetic cover system could be constructed up to the vault area. This modification was submitted to the EPA on 1/25/16 and approved on 2/2/16. A copy of the correspondence is included in Appendix U.
- A void in the existing subgrade was identified in Area A on 2/26/16 located east of the vault/pump station. The area was excavated and backfilled with geotextile filter fabric, riprap, and flowable fill material (7-sack grout mix). This area was addressed to provide a suitable subgrade for the cover system.
- The cover system along the western edge of Area A was modified to provide protection of the cover from truck traffic in this area. The cover system along the edge was changed from a geosynthetic cover to a 6-inch concrete cap. This modification was submitted to the EPA for approval on July 20, 2016, and was approved on July 25, 2016. A copy of the correspondence is included in Appendix U.

7.1.2 Areas C and D

- The alignment of the access road on top of the DGA geocell-reinforced cover was altered to better match the existing grades prior to installing the cover system.
- The culvert under the access road in the northern portion of Areas C & D outside the limits of the cover system was not installed as shown on the drawings. Golder determined conveyance of water under the road was not necessary based on the final grading of the area.
- A rip rap lined drainage swale was added to convey surface water flow along the southern and eastern portions of Areas C and D. The drainage swale was included as surface water flow was eroding the existing gravel surface located outside of Areas C&D.

7.1.3 Area E

- The retaining wall for Area E was re-aligned around the pump/sump unit in the northwest corner. The wall was modified such that a 6-inch concrete cover was constructed around the pump/sump area instead of using a geosynthetic cover. The 6-inch concrete cap and bollards was poured outside of the revised wall alignment around pump/sump unit. This

change was made to facilitate construction of the cover over this area. This modification was submitted to the EPA for approval on August 3, 2015 and was approved by EPA on September 2, 2015. A copy of the approval is included in Appendix U.

- The Area E Detailed Wall Layout was provided to the EPA on October 14, 2015. For constructability reasons, the layout included a minor re-alignment of the wall at a 45-degree angle in the northeast corner, which required placing a 6-inch concrete cap in a small area just outside the limits of the wall up to the existing curb to complete the cap in this area. Additionally, a weir was added on the western side of the retaining wall to control overflow rather than allowing flow to overtop the wall in a severe storm event. The Area E Detailed Wall Layout was provided to the EPA on October 14, 2015 and is included in Appendix U.
- New concrete foundations were poured for two existing light poles along the eastern side of Area E to accommodate the geomembrane/soil cover system rather than constructing HDPE boots around these poles.
- The keyway for the retaining wall around Area E was omitted and replaced with a butt faced joint. Due to the width of the wall and the use of water-stop material in the wall, it was impractical to construct this keyway. Sufficient reinforcement is included in the design of the wall to provide the necessary shear resistance.
- The footing along the northern portion of the retaining wall was modified to widen the foundation to 30 inches in order to provide additional resistance to overturning. All wall sections greater than 36 inches in height were modified.
- The height of the retaining wall for Area E was increased along the perimeter of the "Future Controls Building" area to Elevation 764.4 ft.-MSL. Modifications to the wall were made to match the proposed height of a future foundation wall that was to be constructed for the Control Building. This design modification was submitted to the EPA for approval on January 25, 2016 and was approved by the EPA on February 2, 2016. A copy of the correspondence is included in Appendix U.

7.1.4 PCB Cells

- The access road on top of the cover system was re-aligned to avoid the seep area. Also, the access road was constructed using a 10-oz geotextile fabric beneath the GAB surface rather than a 6-oz geotextile. This change was based upon the availability of the material.
- A rip rap swale ditch will be constructed along the PCB Cells access road entrance outside the limits of the cover system in order to minimize excavation in this area. The original design drawing called for a corrugated metal pipe (CMP) to be located under the entrance road at this location. The rip rap swale will provide the necessary hydraulic capacity to convey water across the road.
- After completing the cover system for the PCB cells, water from the pre-existing seep area was observed emanating from beneath the cover system. As a result, P/S submitted the SWMU 1 Modification design to install a collection system beneath the cover to collect and convey the water from the seep area (Solutia, 2016). P/S plans to implement the approved design in 2017.

7.1.5 Autoclave Unit Area

- PVC condensate lines from the Autoclave Unit were extended to collect and transport steam condensate off of the autoclave cover, and the new lines were constructed beneath the concrete cover.

- One set of concrete cylinders for the Autoclave Unit did not achieve the required 28-day break strength of 3,000 pounds per square inch (psi). Golder determined, as outlined in a memorandum to Solutia dated September 29, 2015 (included in Appendix R), that the lower break strength would not affect the long-term performance of the cover system.

7.1.6 Fencing

- The fence height around the Site perimeter was modified to match the existing fence height for the facility and South Landfill.
- The original Site fencing layout north of the facility's administration building was changed from the RD. The revised layout included removing an existing tree, locating the fencing as shown on Sheet 13 of the Construction Record Drawings, and pouring a concrete cover along the eastern side of the visitor parking area. The concrete cover was constructed in accordance with the same requirements specified for the concrete pad located around Area A. This design modification was submitted to the EPA for approval on January 25, 2016 and was approved by the EPA on February 2, 2016. A copy of the correspondence is included in Appendix U.
- The fence in Area A along the north side of the employee parking lot was offset from the edge of the payment in order accommodate truck traffic entering this portion of the facility.
- The fence along Monsanto Road to the west of the borrow area was set back from the road behind the existing power poles to allow access to the right-of-way along Monsanto Road.

7.2 Groundwater Components

7.2.1 IW-26 and IW-27 System

- The pretreated discharge for IW-26 and IW-27 currently is routed to a temporary frac tank and then hauled to the Facility and discharged to the City of Anniston POTW under the Facility's existing SID discharge permit. This change will be implemented until the AWWSB allow P/S to connect directly to the City of Anniston manhole located near the treatment system in this area or another long-term discharge alternative is implemented.

7.2.2 IW-28 and IW-29 System

- The effluent from the existing interceptor well IW-14A was routed to the new carbon treatment system located near IW-28 and IW-29 and is pretreated prior to discharging to the Facility's SID discharge point. This change was made to address potential future treatment needs. As part of this change, the flow meter vault that was to be located near IW-14A was removed and a flow meter was installed in the CTS to monitor flow from IW-14A, IW-28, and IW-29. The revised layout of the piping network is shown on Sheet 18 of the Construction Record Drawings.
- The precast enclosure for the new CTS was relocated north by approximately 150 ft. to accommodate field conditions and the installation of the new electrical service for this treatment system.
- The new effluent line from the carbon treatment system was increased to a 3" diameter pipe to provide the potential for additional flow and to be consistent with the planned groundwater system modifications that include combining the effluent discharge from CTS #2 and a new treatment system that will be located at the South Landfill prior to discharging all of the effluent to a common discharge location north of Area A. This work is currently on-going and will be documented in subsequent reports.

7.2.3 Carbon Treatment Systems

- 10-micron bag filters were installed in each new CTS upstream of the first GAC unit to collect sediment that might be present in the extracted groundwater.
- Pressure switches were installed in each CTS to monitor for potential over pressurization. The control design was modified to accept a high-pressure alarm signal and to shut down the groundwater extraction pumps.
- Wireless alarm transmitters were installed in each new CTS to relay a general alarm condition signal to the Plant's Control Room to indicate when a CTS unit is shut down due to a high system pressure or leak.

8.0 REMEDIAL ACTION CONSTRUCTION DOCUMENTATION

8.1 Daily Reports

Contractor daily reports are provided in Appendix V. Each report includes the safety topics discussed at the daily safety meetings, a summary of work completed, equipment and personnel on Site, materials delivered to the Site, and a notation about the weather.

8.2 Weekly Progress Meetings

Weekly progress meetings were held with the EPA, ADEM (as available), and P/S to discuss health and safety, work completed during the previous week, work in progress for the current week, and anticipated work to be completed over the upcoming two week period following the meeting. Problems encountered and opportunities to address these problems were discussed. An updated schedule was presented to the EPA and ADEM and discussed during each meeting. Minutes from weekly progress meetings are provided in Appendix V.

8.3 Stormwater Inspection and Maintenance Report Forms

Stormwater inspection and maintenance reports are provided in Appendix W. These reports provide a weekly summary of the weather conditions encountered at the Site, including rain events, and summaries of the findings of the BMP inspections and any maintenance or corrective actions that were conducted based upon the inspections. Additionally, this appendix includes the CBMPP Inspection Field Report Logs that provide further details of the BMP inspections and note when dust suppression was performed based upon the air monitoring that was performed during construction.

8.4 Air Monitoring Data

Up to three air monitors were used to monitor the level of airborne dust as a result of construction activities. If the dust levels exceeded allowable levels or if excessive visible dust was noted, then the need for dust control procedures was evaluated. If deemed appropriate, dust control measures were implemented and noted on the daily reports. Exceedances were typically addressed by temporarily halting work causing the dusty conditions and wetting the area with water from a hose or water truck.

The Contractor's Health and Safety Plan required the Contractor to implement dust suppression measures if visible dust was observed or the 15 minute time weighted average at the downwind property boundary was observed to be greater than 0.15 mg/m^3. However, in order to reduce the amount of dust within the Facility and landfill area, dust monitors were placed immediately adjacent to the work area rather than at the downwind property boundary and an action level of 0.5 mg/m^3 was used to determine whether dust suppression was necessary. These measures were used to determine the need for dust control in lieu of using the 15 minute time weighted average at the downwind property boundary.

The air monitoring data reports are provided in Appendix X.

8.5 Construction Material Quantity and Cost Summary

Appendix Y and Table 1 provide a summary of the final construction material quantities used to complete the RA construction. The RA work was initiated in 2013, and costs exceeded those anticipated due to increased scope of work and the extended construction duration. For the work completed to-date the capital cost of the RA construction has been approximately 6.69 million dollars.

9.0 DEFICIENCIES AND WORK REMAINING

9.1 Deficiencies from the Prefinal Inspection

The Prefinal Construction Inspection was conducted on February 14, 2017 and included representatives from the EPA, EPA Oversight Contractor, RD and RA Supervising Contractors, Construction Management Team, and the Certifying Engineer. A copy of the prefinal construction inspection report is included as Appendix A. The main deficiency noted in the work completed to date was a few shallow ruts in the soil cover in the northeast corner of Area A as a result of vehicular movement immediately following a period of rainfall. These ruts have been rectified by filling with soil, light compaction, and reseeding. The work was completed on April 21, 2017.

9.2 Work Remaining

As part of the Prefinal Construction Inspection, work yet to be completed was reviewed by the EPA and P/S, which included addressing the seep area located at the PCB cells on the South Landfill and connecting the discharge pipe for treated groundwater from CTS #1 located on the Northside Properties (adjacent to well OW-21A). Presently, treated water from CTS #1 is temporarily stored in a frac tank, and water is then transported by truck to the Site DSN-002 discharge location. Ultimately, the treated water will be discharged directly to a AWWSB manhole that is near CTS #1. The sewer connection will be completed upon receiving final approval from the AWWSB for discharging treated groundwater at this location.

During the RD, P/S proposed that the impermeable cover system required for the PCB cells to address impacts to groundwater would cut-off infiltration through the existing cover on top of these cells eliminating the source of water for the seep. However, following installation of the impermeable cover, water emanating from beneath the cover system near the seep area was noted. P/S notified both the EPA and the ADEM of this release in a correspondence letter dated March 23, 2016.

As a result, P/S designed and submitted proposed modifications to the SWMU 1 groundwater extraction and treatment system to address problems associated with the seep area at the South Landfill. These proposed modifications were submitted to the EPA on May 13, 2016. The proposed modifications related to the seep area included collecting water from the seep using collection drains installed beneath the HDPE cover system and conveying the water to a carbon treatment system (CTS #3) for treatment prior to discharging to a permitted AWWSB sewer connection.

P/S provided additional information regarding the design of the collection system for the seep area in a memorandum to the EPA on June 16, 2016 (Basis of Design Memorandum) to further support the design of the proposed system. The EPA approved the proposed design with comments on August 28, 2106 and requested that any additional changes proposed for the system be re-submitted to the EPA for approval.

P/S responded to the EPA's comments and provided updated design documents on September 23, 2016. The EPA approved the submitted changes and authorized P/S to proceed with construction of the proposed equipment and modifications, but indicated that the EPA would like to discuss conducting further investigations of the source of water for the seep area.

The current schedule includes completing construction by the end of 2017. P/S are issuing this Construction Report to document the RA construction activities completed to date, and will issue an addenda to this report as appropriate to document the remainder of RA construction activities that will be implemented.

P/S and the EPA conducted a meeting on October 30, 2016 to discuss the further investigations for the seep area recommended by the EPA, and P/S subsequently submitted a work plan on February 28, 2017 to install additional wells adjacent to the PCB cells at the South Landfill and monitor groundwater levels near the seep. However, prior to installing the wells, a second meeting between EPA and P/S representatives was convened on May 17, 2017 to discuss a more adaptive approach to the seep assessment. Following the meeting, P/S began to develop a revised approach that focuses first on evaluating the analytical chemistry of water from various portions of the aquifer that will be compared to water emanating from the seep. If the results from that approach are inconclusive, P/S will implement the second component of the assessment workplan that focuses on studying the groundwater hydrology to evaluate potential sources of water for the seep. The revised plan will be submitted to the EPA, and the plan will be implemented following approval from the EPA.

10.0 ADDITIONAL CONSIDERATIONS

This section describes health and safety items pertinent to the construction effort completed, and provides a brief overview of the Operations and Maintenance (O&M) activities to be performed after the RA is completed.

10.1 Health and Safety

The contractor completed the construction activities with a total of 41,665 safe work hours logged to date. The CQA consultant performed a Site safety audit on October 14 and 15, 2015. The goal of the audit was twofold; firstly, to observe the contractors performing their assigned tasks, and secondly, to review the implementation of Taylor's overall safety program. Along with field observations, the CQA consultant interviewed Mr. Jason Joiner, Taylor's safety manager. The audit was performed in a manner to foster technical exchange and promote improvement of the safety culture. The observations from the Site safety audit are summarized in Appendix Z.

One notable health and safety incident occurred during the construction activities. On November 16, 2015, an articulated dump truck overturned while being operated by the Contractor. There was no loss of life, significant injury or damage to property. Solutia performed an inspection on November 17, 2015 to assess whether there were any environmental impacts. No potential environmental impacts were noted. A summary of the inspection is included in Appendix Z.

On September 8, 2015, it was reported that wood chips, which had been stockpiled in the borrow area, had ignited and caught fire. The Anniston Fire Department was alerted and the Contractor worked with the fire department to ensure that the fire was contained and didn't cause any safety issues or property damage. The fire was allowed to burn out without incident. Documentation of the incident is included in Appendix Z.

10.2 Operations and Maintenance

Solutia has prepared an O&M Manual for internal adoption until the remaining work is complete. At such time, the manual will be submitted to EPA for approval. The O&M Manual is a stand-alone reference document to be used by those responsible for O&M activities for OU-3.

The OU-3 engineering controls that have been completed are described individually, and the specific O&M activities related to each of them are addressed in the respective sections of the O&M Manual. These engineering controls include the following:

- South Landfill;
- Waste Management Area (WMA) I;
- PCB Cells;

- South Surface Water Diversion Berm;
- West End Landfill and the Alabama Power Company (APCO) Switchyard;
- WMA II;
- Old Limestone Bed Surface Impoundment;
- MCC Warehouse;
- Lined Plant Storm Sewer;
- The Walking Trail;
- Former PCB Production Area;
- Area A;
- Areas C and D;
- Area E;
- Area H;
- Autoclave Unit Area;
- Solid Waste Management Unit (SWMU) 1 Corrective Action Interceptor Well System;
- WMA II Corrective Action Interceptor Well System;
- OW-10 and OW-21A Expansions to the Corrective Action Interceptor Well Systems;
- Groundwater Corrective Action Systems; and
- Carbon Treatment Systems.

The O&M manual also provides inspection frequencies, forms, and guidance on performing the on-going O&M activities.

PRE-FINAL CONSTRUCTION INSPECTION AND PRECONSTRUCTION CONFERENCE NOTES

APPENDIX A1

Pre-Final Construction Inspection Report

May 4, 2017

SENT VIA FEDERAL EXPRESS

Ms. Pamela Langston Scully
USEPA Region 4
Atlanta Federal Center
61 Forsyth St., SW
Atlanta, GA 30303

Re: Operable Unit-3 Prefinal Construction Inspection Report
Anniston PCB Site (docket No. 1:02-cv-0749-KOB)
Anniston, Alabama

Dear Ms. Langston Scully:

Pharmacia LLC (formerly Pharmacia Corporation) and Solutia Inc. ([Solutia], collectively, P/S) have substantially completed Remedial Action (RA) construction activities in accordance with the Interim Record of Decision (IROD) for Operable Unit-3 (OU-3), dated September 29, 2011, and the Statement of Work (SOW) attached to the Consent Decree (CD) (Docket No. 1:02-cv-0749-KOB).

This Prefinal Construction Inspection Report documents the Prefinal Inspection, which comprised a walk-through inspection of OU-3 from 1:30 to 3:30 pm on February 14, 2017.

The following people participated in the inspection:

• Pamela Langston Scully, EPA	EPA Oversight
• Timothy Turner, Versar, Inc.	EPA Oversight Contractor
• Michael Price, Genesis Project Inc.	RA Supervising Contractor
• Joshua Threadgill, Genesis Project Inc.	Assistant Construction Manager
• John Loper, The Loper Group Inc.	Remedial Design Supervising Contractor
• Steven Moeller, Golder Associates Inc.	Certifying Engineer
• Andrew Fuggle, Golder Associates Inc.	Design Engineer

The areas and main construction features that were inspected are identified below:

- Area A (multi-layer cover system and concrete cover);
- Areas C and D (geocell-reinforced dense graded aggregate cover);
- Area E (multi-layer cover system, retaining wall, and concrete cover);
- Area H (concrete cover and fencing);
- South Landfill PCB Cells (RCRA Subtitle-C compliant cap and fencing);

- Autoclave Unit Area (concrete cover);
- Perimeter fencing north of Area A;
- Carbon Treatment System #1 (near OW-21A); and
- Carbon Treatment System #2 (near OW-10).

The only outstanding construction item noted during the inspection was a few shallow ruts in the soil cover in the northeast corner of Area A as a result of vehicular movement immediately following a period of rainfall. The required actions to resolve this item include smoothing and re-compaction of the rutted areas, and reseeding the affected area. This work was completed on April 21, 2017.

An anticipated date for the Final Inspection cannot be set at this time as two aspects of the RA construction activities are not yet complete. One relates to the seep area at the South Landfill, and is expected to be completed by the end of October 2017. The other relates to determining the ultimate discharge location for treated groundwater from the new pump and treat system located on the Northside Properties (adjacent to well OW-21A). This determination will be made following completion of discussions with the Anniston Water Works and Sewer Board, which are ongoing.

P/S will notify EPA when the final items have been addressed so that the Final Inspection can be scheduled.

Please do not hesitate to contact me at 256-231-8404 if you have any questions or need additional information in this regard.

Sincerely,

E. Gayle Macolly Harris
Manager, Remedial Projects

The meeting was opened at the Solutia Inc. (Solutia), Anniston, Alabama Plant Site at 3:30pm CST on Monday, June 8, 2015.

1.0 INTRODUCTIONS (ROLES AND RESPONSIBILITIES)

The meeting began with an introduction of the parties present. Attendees introduced themselves and summarized their role in the RA project:

- Ms. Pam Scully will serve as EPA oversight; with members of J.M. Waller contracted to serve as EPA's on-site representatives during the project.
- Solutia's remediation project team will consist of Ms. Gayle Macolly (Remedial Project Manager), Mr. Mike Price (RA Supervising Contractor), Mr. Donn Williams (RA Construction Manager), Mr. Josh Threadgill (Assistant Construction Manager), and Mr. John Loper and Mr. Thomas Loper (Remedial Design team).
- Golder Associates Inc. (Golder) will serve as Construction Quality Assurance (CQA) consultant, with Mr. Steve Moeller functioning as the Certifying Engineer. Golder will act as the Contractor for groundwater portion of the RA.
- Taylor Corporation has been awarded the contract for the cover systems portion of the RA.
- Representatives from ADEM will monitor construction activity on behalf of the State.

2.0 JOB SITE COMMUNICATIONS AND AUTHORITY

All personnel working on site have "stop work" authority. If any work activity is seen as unsafe, work should be stopped until the issue is corrected.

The Construction Manager (Mr. Donn Williams) will be the direct line of contact between the Owner, oversight personnel, and the Contractor. It is very important to follow these lines of communication throughout construction to avoid misinterpretations and to promote safety.

Any changes to the scope of work must be reviewed by the Remedial Design Engineer and approved by the Supervising Contractor and Construction Manager. EPA should be notified of any changes in scope prior to implementing the changes. The Supervising Contractor will be responsible for communicating with the EPA and notifying EPA of any proposed changes. One version of the edited "redline" construction drawings will be maintained at the site by the Construction Manager.

Weekly progress meetings will be held on Wednesdays; a "look-ahead" estimate will be provided as part of the meetings. Managers will meet on a monthly basis, and P/S will include a summary of construction activities within the monthly status report to the EPA.

3.0 HEALTH & SAFETY AND SECURITY

Mr. Donn Williams stated that daily health and safety tailgate meetings will be held each morning with all on-site personnel present. Attendees were reminded of the Plant's health and safety procedures:

- Contractor is responsible for submitting site-specific Health and Safety and Contingency Plan (HSCP), which will include dust monitoring and spill response procedures;
- Contractor is responsible for Traffic Management Plan;
- Contractor is responsible for hiring an off-duty police officer for traffic management during periods when construction vehicles cross Alabama Highway 202;
- On-site personnel, who may be exposed to hazards, must be OSHA 40-hour HAZWOPER certified as stated in the Contract Documents;
- All on-site personnel must complete the Plant's site-specific training video;
- Hard hats and long-sleeve shirts are required, at a minimum;
- Lighters are not allowed within the Plant site; and

- Contractors must comply with site-specific policies (i.e. excavation permit and hot work permit).

Attendees were reminded of the Plant's security procedures:

- The Plant site and work areas must be secured and fenced at all times. If removal of fencing is required for construction, it must be replaced by the end of the shift;
- A site security guard is required to monitor construction entrances, exits, and gates;
- Contractors must sign in and sign out daily. Only authorized personnel and vehicles are allowed on-site;
- Construction vehicles will require a daily inspection/approval;
- Daily parking for construction personnel is available in the Plant parking lot only (north end of parking lot);
- All on-site personnel must sign and comply with the contractor background check policy;
- No pictures are allowed unless authorized by the Owner. Site-specific cameras will be made available at the Site for oversight personnel to take pictures. Pictures must be approved by the Plant site personnel prior to use;
- Cell phone use is not allowed within the Plant site; and
- A Solutia representative indicated that the EPA and ADEM were exempt from the plant background check policy.

4.0 DESCRIPTION OF WORK AREAS

Mr. Steve Moeller gave an overview of the RA work areas with reference to the construction drawings and the types of covers in each area:

- Area A (HDPE geomembrane and soil cover, limited areas of concrete);
- Areas C and D (DGA cover);
- Area E (HDPE geomembrane and soil cover, and concrete retaining wall);
- Autoclave Unit Area (Concrete cover);
- PCB Cells (HDPE geomembrane and soil cover);
- Coldwater Mountain Borrow Area; and,
  - Contractor was reminded that shaker screen should be set to 1-inch size.
- Groundwater Recovery and Treatment System.

The descriptions provided were consistent with the Contract Documents for the project. Refer to the RA Work Plan, construction drawings, and the technical specifications for further details.

5.0 CONSTRUCTION SCHEDULE

A discussion of construction schedule included the following:

- Notice to Proceed (NTP) is tentatively scheduled for June 15, 2015;
- Approved working hours are set from 6:30am – 6:30pm. Work hours may be adjusted according to weather and season as approved by the Construction Manager;
- Erosion Control and fencing should be implemented prior to starting work in any area:
  - Daily inspections consistent with the Construction Best Management Plan (CBMPP) are required
  - Sediment bags are required anytime storm water is pumped from any construction area
- Autoclave (work required to be completed during the Plant "turn-around" period, currently scheduled from August 11-28); and
- Groundwater Systems:
  - Drilling and installation of the new interceptor wells is anticipated for the end of July;

- Installation of carbon treatment systems will begin in the middle of August, after the cap/cover for Area A has been initiated.

During this discussion, Mr. Moeller emphasized the importance of installing Best Management Practices (BMPs) prior to initiating intrusive work at the site and for maintaining BMPs throughout construction. Erosion will be monitored and the Contractor will be required to mitigate any erosion or sedimentation issues immediately.

6.0 SUBMITTALS/SHOP DRAWINGS

- Contractor's schedule is due 7 days following the NTP
- Contractor is responsible for submitting Submittal List including schedule requirements
- Progress payments are scheduled for the 15th of each month

7.0 PROJECT CLOSEOUT

- Pre-Final and Final Completion Inspections
- As-Built Drawings and Final Completion Report (one report will be issued for all of the RA work activities)

8.0 MEETING ADJOURNED

Meeting was adjourned at 5:00pm CST

- UNSPECIFIED UNDERGROUND UTILITY
- PROCESS SEWER
- ABOVE-GROUND WATER VALVE

REFERENCES

1. UTILITY LINES WERE LOCATED BY EGSCI CONSULTING INC. THROUGH SURFACE GEOPHYSICAL (GROUND PENETRATING RADAR AND INDUCTION) METHODS IN APRIL 2013 OR ARE BASED ON HISTORIC PLANT RECORDS AND SHOULD BE CONSIDERED APPROXIMATE LOCATIONS. LOCATIONS OF UTILITY MARKINGS FROM GEOPHYSICAL WORK WERE SURVEYED BY TAYLOR LAND SURVEYING IN APRIL AND MAY 2013.

2. THE IDENTIFICATION OF THE PURPOSE / TYPE / SIZE OF THE UNDERGROUND UTILITIES SHOWN WAS OBTAINED FROM THE DRAWING ENTITLED "STUMP.dwg" PROVIDED BY SOLUTIA INC.

3. TOPOGRAPHY FROM CALHOUN COUNTY (2012) AND LOWERY & ASSOCIATES LAND SURVEYING, LLC; DATED APRIL 17, 2013.

4. BASE DRAWING IS "ALTA / ACSM LAND TITLE SURVEY OF: OPERABLE UNIT 3 OF THE ANNISTON PCB SITE; PREPARED FOR: SOLUTIA INC." BY LOWERY & ASSOCIATES LAND SURVEYING, LLC; DATED APRIL 17, 2013.

ALABAMA LICENSED No. 34145 PROFESSIONAL ENGINEER STEVEN J. MOELLER

12/22/2017

NOTES

1. EXISTING STRUCTURES AND UTILITIES WERE LEFT IN PLACE UNLESS INDICATED OTHERWISE.

2. UTILITIES OUTSIDE OF SHADED AREAS ARE NOT FULLY DISPLAYED.

3. SEE SHEET 13 FOR EXTENT OF FENCING REMOVED AND REPLACED IN AREA A.

4. EXISTING FENCE POSTS WERE LEFT IN PLACE. FENCE FABRIC WAS REMOVED AS NECESSARY TO FACILITATE CONSTRUCTION BUT WAS REPLACED AT THE END OF CONSTRUCTION.

5. INFRASTRUCTURE AND UTILITIES ADDED OR MODIFIED AFTER APRIL 2013 ALTA LAND SURVEY AND UTILITY LOCATE EFFORTS ARE NOT FULLY CAPTURED (REFER TO FACILITY STUMP DRAWING).

6. BASE OF EXISTING SIGN WAS RAISED BY CONTRACTOR TO ACCOMMODATE RA COVER SYSTEM.

7. THE EXISTING CONDITIONS REPRESENT SITE CONDITIONS PRIOR TO IMPLEMENTING THE REMEDIAL ACTION.

THESE RECORD DRAWINGS HAVE BEEN PREPARED BASED UPON INFORMATION FROM VARIOUS SOURCES. THESE SOURCES HAVE BEEN REFERENCED ON THE APPROPRIATE DRAWINGS.

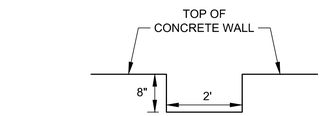
0 20 40 60
5X VERTICAL EXAGGERATION FEET

NOTES



1. THE CONTRACTOR PLACED AN HDPE OR PVC SLEEVE AROUND PIPES THAT PASSED THROUGH THE WALL FOOTING PRIOR TO CONSTRUCTING THE FOOTING. THE SLEEVE WAS AT LEAST TWO INCHES GREATER IN DIAMETER THAN THE EXISTING PIPE. THE SLEEVE WAS SECURED IN PLACE AND THE ANNULAR SPACE FILLED WITH FLEXIBLE MATERIAL.

2. IF A MINIMUM OF TWO INCHES OF DGA COVER MATERIAL WAS NOT MAINTAINED ABOVE EXISTING UTILITIES BENEATH THE WALL FOOTING, AN HDPE OR PVC SLEEVE WAS USED TO COVER THE UPPER PORTION OF THE PIPE THAT PASSED BENEATH THE FOOTING. THE SLEEVE WAS AT LEAST TWO INCHES GREATER IN DIAMETER THAN THE EXISTING PIPE AND THE ANNULAR SPACE ABOVE THE PIPE WAS FILLED WITH FLEXIBLE MATERIAL.

3. 4,000 PSI CONCRETE MIX DESIGN WAS USED AS PROPOSED BY CONTRACTOR.

WMA II CORRECTIVE ACTION SYSTEM

SWMU I CORRECTIVE ACTION SYSTEM

LEGEND

- NEW CONVEYANCE LINE
- EXISTING CONVEYANCE LINE
- IW-27 — NEW INTERCEPTOR WELL
- IW-06 — EXISTING INTERCEPTOR WELL
- BALL VALVE
- F/M — FLOW METER
- PUMP

NOTES

1. THE INTERCEPTOR WELL (IW) EXTRACTION SYSTEM CONSISTS OF CLUSTERS OF WELLS GROUPED INTO TWO UNITS. THE SOLID WASTE MANAGEMENT UNIT (SWMU) 1 CORRECTIVE ACTION SYSTEM, COMPRISED OF THE WESTERN AND NORTHERN CORRECTIVE ACTION SYSTEMS FOR THE SOUTH LANDFILL AND THE PLANT SITE CORRECTIVE ACTION SYSTEM; AND THE WASTE MANAGEMENT AREA (WMA) II SYSTEM LOCATED IN THE NORTHWEST PORTION OF THE PLANT SITE.

2. THE EXISTING SWMU I SYSTEM INCLUDES THE FOLLOWING INTERCEPTOR WELLS: IW-2, IW-5, IW-6, IW-7, IW-8, IW-10, IW-11, IW-12, IW-13, AND IW-14A. TWO NEW WELLS, IW-28 AND IW-29, WERE INCORPORATED IN THIS SYSTEM. AN ADDITIONAL WELL, IW-9, WAS NOT CONSIDERED PART OF THE SWMU I SYSTEM BUT CONTINUES TO FUNCTION AND IS INSPECTED AND MAINTAINED WITH THE OTHER SWMU I SYSTEM WELLS

3. THE EXISTING WMA II SYSTEM INCLUDES THE FOLLOWING INTERCEPTOR WELLS: IW-16, IW-17, IW-18, IW-19, IW-20, IW-21, IW-22, IW-23, IW-24, IW-25, AND DW-1. TWO NEW WELLS, IW-26 AND IW-27, WERE INCORPORATED IN THIS SYSTEM.

4. THE DISCHARGE FROM BASINS 5/6 INCLUDES PLANT PROCESS WASTEWATER WHICH IS PUMPED TO THE ANNISTON PUBLICLY OWNED TREATMENT WORKS (POTW) CONNECTION (SID PERMIT NO. IU 35 08 00048).

5. THE EXISTING TOTALIZING FLOW METER LOCATED AT IW-14A WAS REPLACED WITH A NEW METER THAT WILL TOTALIZE THE FLOW FROM IW-14A, IW-28 AND IW-29.

6. FLOWS FROM IW-26 AND IW-27 DIRECTED TO A TEMPORARY ABOVE GROUND STORAGE TANK. TANK CONTENTS HAULED TO LIFT STATION AS REQUIRED.

7. TWO TEMPORARY ABOVE GROUND STORAGE TANKS WERE INSTALLED AT THE SOUTH LANDFILL (FEBRUARY 2016). EFFLUENT FROM THE WELLS IS REDIRECTED TO THE STORAGE TANKS. THE TANKS' CONTENTS ARE HAULED TO THE LIFT STATION AS REQUIRED.

8. EXISTING INTERCEPTOR WELL SYSTEMS SHOWN TO INDICATE HOW THE NEW AND EXISTING SYSTEMS INTERACT.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734157GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734161GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734168GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734169GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002666516GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002666517GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

ACKNOWLEDGEMENT OF RECEIPT OF WASTE SHIPMENT

Generator Name: SOLUTIA
Enclosed is/are your Generator Number Two copy / copies for Alabama Manifest Numbers:

002666521GBF

This copy is to acknowledge that Chemical Waste Management, Inc., of Emelle, Alabama has received your shipment. As a requirement of 40 CFR 264.12 (b), this letter serves to inform you that this facility has the proper permits and will accept your shipment upon completion of waste analysis procedures specified in the facility's Waste Analysis Plan and as determined in the approval waste profile submitted for this/these wastes.

As of September 26, 1997, Chemical Waste Management, Inc., Emelle Alabama (ALD000622464) is operating under a AHWMMA Permit, issued by the Alabama Department of Environmental Management. (RCRA)

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002666522GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002666525GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

ACKNOWLEDGEMENT OF RECEIPT OF WASTE SHIPMENT

Generator Name: SOLUTIA
Enclosed is/are your Generator Number Two copy / copies for Alabama Manifest Numbers:

002734171GBF

This copy is to acknowledge that Chemical Waste Management, Inc., of Emelle, Alabama has received your shipment. As a requirement of 40 CFR 264.12 (b), this letter serves to inform you that this facility has the proper permits and will accept your shipment upon completion of waste analysis procedures specified in the facility's Waste Analysis Plan and as determined in the approval waste profile submitted for this/these wastes.

As of September 26, 1997, Chemical Waste Management, Inc., Emelle Alabama (ALD000622464) is operating under a AHWMMA Permit, issued by the Alabama Department of Environmental Management. (RCRA)

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734180GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

ACKNOWLEDGEMENT OF RECEIPT OF WASTE SHIPMENT

Generator Name: SOLUTIA
Enclosed is/are your Generator Number Two copy / copies for Alabama Manifest Numbers:

002734180GBF

This copy is to acknowledge that Chemical Waste Management, Inc., of Emelle, Alabama has received your shipment. As a requirement of 40 CFR 264.12 (b), this letter serves to inform you that this facility has the proper permits and will accept your shipment upon completion of waste analysis procedures specified in the facility's Waste Analysis Plan and as determined in the approval waste profile submitted for this/these wastes.

As of September 26, 1997, Chemical Waste Management, Inc., Emelle Alabama (ALD000622464) is operating under a AHWMMA Permit, issued by the Alabama Department of Environmental Management. (RCRA)

Al Talbott
Safety Manager

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734186GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734191GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

ACKNOWLEDGEMENT OF RECEIPT OF WASTE SHIPMENT

Generator Name: SOLUTIA
Enclosed is/are your Generator Number Two copy / copies for Alabama Manifest Numbers:

002734192GBF

This copy is to acknowledge that Chemical Waste Management, Inc., of Emelle, Alabama has received your shipment. As a requirement of 40 CFR 264.12 (b), this letter serves to inform you that this facility has the proper permits and will accept your shipment upon completion of waste analysis procedures specified in the facility's Waste Analysis Plan and as determined in the approval waste profile submitted for this/these wastes.

As of September 26, 1997, Chemical Waste Management, Inc., Emelle Alabama (ALD000622464) is operating under a AHWMMA Permit, issued by the Alabama Department of Environmental Management. (RCRA)

Al Talbott
Safety Manager

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002666520GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

ACKNOWLEDGEMENT OF RECEIPT OF WASTE SHIPMENT

Generator Name: SOLUTIA
Enclosed is/are your Generator Number Two copy / copies for Alabama Manifest Numbers:

002666520GBF

This copy is to acknowledge that Chemical Waste Management, Inc., of Emelle, Alabama has received your shipment. As a requirement of 40 CFR 264.12 (b), this letter serves to inform you that this facility has the proper permits and will accept your shipment upon completion of waste analysis procedures specified in the facility's Waste Analysis Plan and as determined in the approval waste profile submitted for this/these wastes.

As of September 26, 1997, Chemical Waste Management, Inc., Emelle Alabama (ALD000622464) is operating under a AHWMMA Permit, issued by the Alabama Department of Environmental Management. (RCRA)

ACKNOWLEDGEMENT OF RECEIPT OF WASTE SHIPMENT

Generator Name: SOLUTIA
Enclosed is/are your Generator Number Two copy / copies for Alabama Manifest Numbers:

002734155GBF

This copy is to acknowledge that Chemical Waste Management, Inc., of Emelle, Alabama has received your shipment. As a requirement of 40 CFR 264.12 (b), this letter serves to inform you that this facility has the proper permits and will accept your shipment upon completion of waste analysis procedures specified in the facility's Waste Analysis Plan and as determined in the approval waste profile submitted for this/these wastes.

As of September 26, 1997, Chemical Waste Management, Inc., Emelle Alabama (ALD000622464) is operating under a AHWMMA Permit, issued by the Alabama Department of Environmental Management. (RCRA)

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734164GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

ACKNOWLEDGEMENT OF RECEIPT OF WASTE SHIPMENT

Generator Name: SOLUTIA
Enclosed is/are your Generator Number Two copy / copies for Alabama Manifest Numbers:

002734164GBF

This copy is to acknowledge that Chemical Waste Management, Inc., of Emelle, Alabama has received your shipment. As a requirement of 40 CFR 264.12 (b), this letter serves to inform you that this facility has the proper permits and will accept your shipment upon completion of waste analysis procedures specified in the facility's Waste Analysis Plan and as determined in the approval waste profile submitted for this/these wastes.

As of September 26, 1997, Chemical Waste Management, Inc., Emelle Alabama (ALD000622464) is operating under a AHWMMA Permit, issued by the Alabama Department of Environmental Management. (RCRA)

CERTIFICATE OF DISPOSAL

Chemical Waste Management, Inc. (ALD000622464) has received PCB material from
SOLUTIA

as described on Hazardous Waste Manifest Number 002734166GBF-1
Waste Management, Inc. hereby certifies that the above described material (excluding PCB liquids, if applicable) was landfilled on the dates shown below, in compliance with State and Federal Regulations.

Under civil and criminal penalties of law for the making or submission of false or fraudulent statements or representation (18 U.S.C. 1001 and 15 U.S.C. 2615), I certify that the information contained in or accompanying this document is true, accurate and complete. As to the identified section(s) of this document for which I cannot personally verify truth and accuracy, I certify as the company official having supervisory responsibility for the persons who, acting under my direct instructions, made the verification that this information is true, accurate and complete.

Shipping Order – Packing List – Original – Not Negotiable

GSE Environmental, LLC Houston, TX

Number BL–0090813

Received at **Houston, TX** from GSE Environmental, LLC the property described below, in apparent good order, except as noted (contents and condition of packages unknown), marked, consigned, and destined as indicated below, which said Carrier agrees to carry to the place of delivery at said destination. It is mutually agreed as to each Carrier of all or any said property, over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service performed hereunder shall be subject to the rates and contract agreed to in writing by GSE Environmental, LLC and Carrier. GSE Environmental, LLC's obligation to pay freight charges for the shipment is conditioned on (1) the existence of a separate written contract with the Carrier transporting the freight and (2) the Carrier's name appearing on this Bill of Lading, and other carriers must look solely to a party other than GSE Environmental, LLC for payment.

Shipping Order – Packing List – Original – Not Negotiable

GSE Environmental, LLC Houston, TX

Number BL-0090833

Received at **Houston, TX** from GSE Environmental, LLC the property described below, in apparent good order, except as noted (contents and condition of packages unknown), marked, consigned, and destined as indicated below, which said Carrier agrees to carry to the place of delivery at said destination. It is mutually agreed as to each Carrier of all or any said property, over all or any portion of said route to destination, and as to each party at any time interested in all or any of said property, that every service performed hereunder shall be subject to the rates and contract agreed to in writing by GSE Environmental, LLC and Carrier. GSE Environmental, LLC's obligation to pay freight charges for the shipment is conditioned on (1) the existence of a separate written contract with the Carrier transporting the freight and (2) the Carrier's name appearing on this Bill of Lading, and other carriers must look solely to a party other than GSE Environmental, LLC for payment.

Product Data Sheet

PRODUCT DATA SHEET

GSE HD Textured Geomembrane

GSE HD Textured is a co-extruded textured high density polyethylene (HDPE) geomembrane available on one or both sides. It is manufactured from the highest quality resin specifically formulated for flexible geomembranes. This product is used in applications that require increased frictional resistance, excellent chemical resistance and endurance properties.

AT THE CORE:
An HDPE geomembrane used in applications that require increased frictional resistance, excellent chemical resistance and endurance properties.

Product Specifications

These product specifications meet GRI GM13

Tested Property	Test Method	Frequency	Minimum Average Value				
			30 mil	40 mil	60 mil	80 mil	100 mil

NOTES:
- (1)Dispersion only applies to near spherical agglomerates. 9 of 10 views shall be Category 1 or 2. No more than 1 view from Category 3.
- (2)NCTL for GSE HD Textured is conducted on representative smooth membrane samples.
- (3)Roll lengths and widths have a tolerance of ±1%.
- GSE HD Textured is available in rolls weighing approximately 4,000 lb.
- All GSE geomembranes have dimensional stability of ±2% when tested according to ASTM D 1204 and LTB of <-77°C when tested according to ASTM D 746.
- *Modified.

GSE is a leading manufacturer and marketer of geosynthetic lining products and services. We've built a reputation of reliability through our dedication to providing consistency of product, price and protection to our global customers.

Our commitment to innovation, our focus on quality and our industry expertise allow us the flexibility to collaborate with our clients to develop a custom, purpose-fit solution.

APPENDIX F2.4

Interface Shear Test Results

Golder Associates	**SUBJECT:**	Interface Shear Strength for OU-3 RA Project	
	Job No.:	1302962CQA	**Prepared:** SM
	Ref.:	Solutia / OU-3 Remedial Action / AL	**Checked:** TPC
	Date:	Aug-24-2015	

Objective:

Evaluate the laboratory strength parameters for the interface shear strength testing completed for the OU-3 Remedial Action project.

Material Properties:

The components within the analysis cross sections are:

1 Topsoil
2 Cover Soils (from on-site borrow source)
3 Geocomposite drainage layer (double sided)
4 40 mil Textured HDPE Liner
5 Compacted subgrade layer (from on-site borrow source_

Interface Shear Testing Results

Interface shear tests were performed on the proposed liner system for the OU-3 Remedial Action project. The shear tests were run using cover soil compacted to 90% of the maximum dry density underlain by a geocomposite drainage layer, HDPE textured geomembrane, and subgrade soil compacted to 95% of the maximum dry density. Conservatively, the average of the peak and residual values was selected.

Test	Peak Strength		Residual Strength		Design Strength		Basis
	ϕ' (Deg)	c' (psi)	ϕ' (Deg)	c' (psi)	ϕ' (Deg)	c' (psi)	
Test #1	32.6	0.2	24.1	0.4	28.4	0.3	Avg. of peak/residual
Test #2	21.8	1.0	14.4	1.1	18.1	1.1	Avg. of peak/residual

Resulting Shear Stresses (psi) for Each Test

$(\tau_f'$ psi) = c' + σ'_v * tan (ϕ')

σ'_v (psi)	Test #1	Test #2	Reference (15 deg)
0	0.3	1.1	0.0
1	0.8	1.4	0.3
5	3.0	2.7	1.3
10	5.7	4.3	2.7

The average of the peak/residual values provide shear stresses at the corresponding normal stresses that all exceed the values required from the specifications (15 degrees).

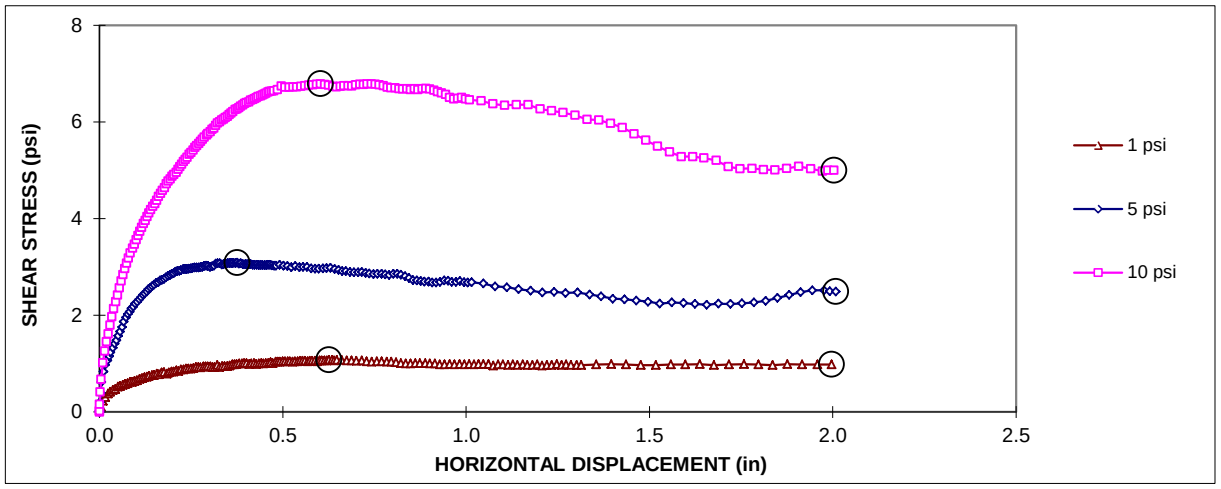
AUGUST 2015 1302962-CQA

DIRECT SHEAR TEST RESULTS

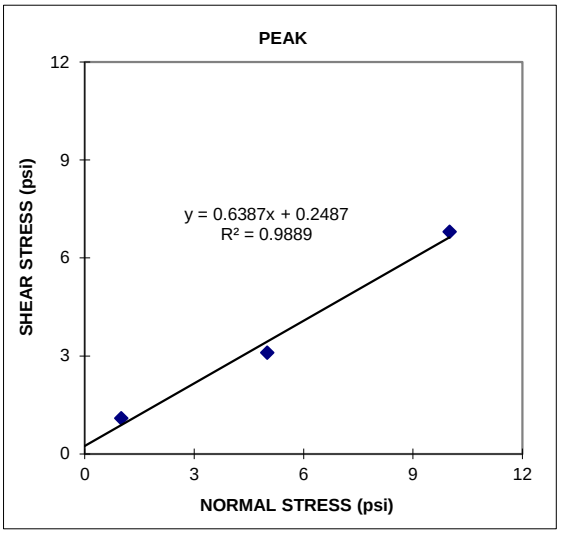
ASTM D5321

PROJECT NAME: SOLUTIA/ONSITE OU-3 RA CONSTRUCTION/AL
SAMPLE NUMBER: DShr-1

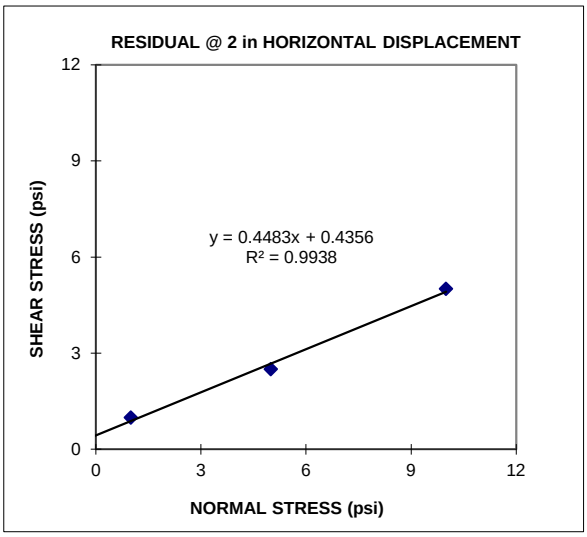


INTERFACE TESTED: **TOP BOX** - COVER SOIL (7/22/2015 CMT Borrow)
SKAPS TN-240-2-8 GEOCOMPOSITE (floating)
GSE 60 mil TEXTURED HDPE GEOMEMBRANE (Roll #108183098)(floating)
BOTTOM BOX - SUBGRADE SOIL (7/22/2015 CMT Borrow)

SOIL CONDITIONS: **COVER SOIL** - REMOLDED TO 90% OF THE MAX DRY DENSITY OF 110.8 pcf AT A MOISTURE OF 16.8 +/- 0.5%
SUBGRADE SOIL - REMOLDED TO 95% OF THE MAX DRY DENSITY OF 110.8 pcf AT A MOISTURE OF 16.8 +/- 0.5%



TEST CONDITIONS: INTERFACES WETTED, CONSOLIDATED 8 hours AT NORMAL LOAD



SHEAR RATE: 0.004 in/min

SUBSTRATE: TEXTURED RIGID PLATES

Normal Stress (psi)	Shear Stress Peak[1] (psi)	Shear Stress Residual (psi)	Peak Friction Angle	Peak Adhesion[2] (psi)	Residual Friction Angle	Residual Adhesion[2] (psi)
1	1.1	1.0				
5	3.1	2.5	32.6	0.2	24.1	0.4
10	6.8	5.0				

Observations After Test

1 psi: Shearing occurred between the Geocomposite and the Cover Soil
5 psi: Shearing occurred between the Geocomposite and the Geomembrane
10 psi: Shearing occurred between the Geocomposite and the Geomembrane

(1) The peak shear stresses for 1, 5 and 10 psi normal stresses were chosen at 0.626, 0.375 and 0.603 inch horizontal displacements, respectively.

(2) The adhesion value is based on the "best-fit" line which may not show true adhesion.

10 psi: Shearing occurred between the Geocomposite and the Geomembrane

(1) The peak shear stresses for 1, 5 and 10 psi normal stresses were chosen at 0.401, 0.269 and 0.187 inch horizontal displacements, respectively.

(2) The adhesion value is based on the "best-fit" line which may not show true adhesion.

CARRIER MUST COLLECT THE FREIGHT FROM THE BROKER ONLY

Received at Commerce, GA from SKAPS Industries the property described above, in apparent good order except as noted (contents and condition of packages unknown), marked, consigned, and destined as indicated above, which said Carrier (the word "Carrier" being understood throughout this Shipping Order as meaning the person or corporation in possession of the property) agrees to carry to the place of delivery at said destination. It is mutually agreed as to each Carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any of said property, that every service performed here under shall be subject to either: (a) if the shipper noted herein is SKAPS Industries as indicated by the designation of the "Shipper" to be SKAPS Industries, then the Shipper and Carrier are subject to the terms and conditions contained in the Contract for truck Transportation existing between the parties or (b) if the Shipper noted herein is not SKAPS Industries then SKAPS Industries is acting solely as the agent for the denoted Shipper, and thus every aspect of the service to be perform here under between the Shipper and the Carrier shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Official Southern, Western, and Illinois Freight Classifications in effect on the date hereof, if this a rail-water shipment, or (2) in the applicable motor carrier classification or tariff if this is a motor carrier shipment. When acting in the capacity of an agent for a Shipper in placing the material in transit on behalf of a Shipper, SKAPS Industries accepts no liability for loss of cargo, damage to containers, or any other consequences occurring during transportation. Carrier having agreed that the transportation arrangement was initiated by the Shipper and not by SKAPS Industries Subject to the above terms and conditions as to which party is the Shipper, Shipper hereby certifies that he is familiar with the terms and conditions that govern the transportation of this shipment, and the said terms and conditions are hereby agreed and accepted for himself and his assigns.

CARRIER MUST COLLECT THE FREIGHT FROM THE BROKER ONLY

Received at Commerce, GA from SKAPS Industries the property described above, in apparent good order except as noted (contents and condition of packages unknown), marked, consigned, and destined as indicated above, which said Carrier (the word "Carrier" being understood throughout this Shipping Order as meaning the person or corporation in possession of the property) agrees to carry to the place of delivery at said destination. It is mutually agreed as to each Carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any of said property, that every service performed here under shall be subject to either: (a) If the shipper noted herein is SKAPS Industries as indicated by the designation of the "Shipper" to be SKAPS Industries, then the Shipper and Carrier are subject to the terms and conditions contained in the Contract for truck Transportation existing between the parties or (b) if the Shipper noted herein is not SKAPS Industries then SKAPS Industries is acting solely as the agent for the denoted Shipper, and thus every aspect of the service to be perform here under between the Shipper and the Carrier shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Official Southern, Western, and Illinois Freight Classifications in effect on the date hereof, if this a rail-water shipment, or (2) in the applicable motor carrier classification or tariff if this is a motor carrier shipment. When acting in the capacity of an agent for a Shipper in placing the material in transit on behalf of a Shipper, SKAPS Industries accepts no liability for loss of cargo, damage to containers, or any other consequences occurring during transportation. Carrier having agreed that the transportation arrangement was initiated by the Shipper and not by SKAPS Industries Subject to the above terms and conditions as to which party is the Shipper, Shipper hereby certifies that he is familiar with the terms and conditions that govern the transportation of this shipment, and the said terms and conditions are hereby agreed and accepted for himself and his assigns.

CARRIER MUST COLLECT THE FREIGHT FROM THE BROKER ONLY

Received at Commerce, GA from SKAPS Industries the property described above, in apparent good order except as noted (contents and condition of packages unknown), marked, consigned, and destined as indicated above, which said Carrier (the word "Carrier" being understood throughout this Shipping Order as meaning the person or corporation in possession of the property) agrees to carry to the place of delivery at said destination. It is mutually agreed as to each Carrier of all or any of said property, over all or any portion of said route to destination and as to each party at any time interested in all or any of said property, that every service performed here under shall be subject to either: (a) if the shipper noted herein is SKAPS Industries as indicated by the designation of the "Shipper" to be SKAPS Industries, then the Shipper and Carrier are subject to the terms and conditions contained in the Contract for truck Transportation existing between the parties or (b) if the Shipper noted herein is not SKAPS Industries then SKAPS Industries is acting solely as the agent for the denoted Shipper, and thus every aspect of the service to be perform here under between the Shipper and the Carrier shall be subject to all the terms and conditions of the Uniform Domestic Straight Bill of Lading set forth (1) in Official Southern, Western, and Illinois Freight Classifications in effect on the date hereof, if this a rail-water shipment, or (2) in the applicable motor carrier classification or tariff if this is a motor carrier shipment. When acting in the capacity of an agent for a Shipper in placing the material in transit on behalf of a Shipper, SKAPS Industries accepts no liability for loss of cargo, damage to containers, or any other consequences occurring during transportation. Carrier having agreed that the transportation arrangement was initiated by the Shipper and not by SKAPS Industries Subject to the above terms and conditions as to which party is the Shipper, Shipper hereby certifies that he is familiar with the terms and conditions that govern the transportation of this shipment, and the said terms and conditions are hereby agreed and accepted for himself and his assigns.

APPENDIX G2

Conformance Testing

APPENDIX G2.1

Quality Control Certificates

September 28, 2015
Plastic Fusion Fabricators, Inc.
3455 Stanwood Blvd
Huntsville, AL, 35811

Ref. : Solutia Landfill Closure, AL
Customer P.O. # P15896
Product : TN 240-2-8

We certify that the TN 240-2-8 drainage geocomposite, meets the project requirements as stated in the specifications. The properties listed in this section are:

Property	Test Method	Unit	Required Value	Qualifier
Geonet[3]				
Thickness	ASTM D 5199	mil	200	MAV
Carbon Black	ASTM D 4218	%	1.5 - 3.0	Range
Tensile Strength	ASTM D 7179	lbs/in	40	MAV[6]
Melt Flow	ASTM D 1238[2]	g/10 min	1.0	Maximum
Density	ASTM D 1505	g/cm^3	0.93	Minimum
Composite				
Ply Adhesion	ASTM D 7005	lb/in	1.0	MAV
Transmissivity[1]	ASTM D 4716	m^2/sec	1.0×10^{-4}	MAV
Geotextile[3 & 4]				
Fabric Weight	ASTM D 5261	oz/yd^2	8.0	MARV[5]
Grab Strength	ASTM D 4632	lbs	205	MARV
Grab Elongation	ASTM D 4632	%	50	MARV
CBR Puncture	ASTM D 6241	lbs	425	MARV
AOS	ASTM D 4751	US Sieve	80	MARV
UV Resistance	ASTM D 4355	%/hrs	70/500	MARV

Notes:

1 Transmissivity measured using water at 21 ± 2 °C (70 ± 4 °F) with a gradient of 0.1 and a confining pressure of 250 psf between ottawa sand & geomembrane after 100 hours.

2 Condition 190/2.16

3 Geotextile and Geonet properties are prior to lamination.

4 Geotextile data is provided by the supplier.

5 MARV is statistically defined as mean minus two standard deviations and it is the value which is exceeded by 97.5% of all the test data.

6 Minimum average value.

Sincerely,

Rajesh Patel

Rajesh Patel
QA Manager

ASTM D 4716

Client:	Plastic Fusion Fabricators, Inc.	**Job #**	6638
Project:	Solutia Landfill Closure, AL		
Product:	TN 240-2-8		

Test Configuration:

Test Information:

Boundary Conditions:	Ottawa Sand Geocomposite Geomembrane	**Normal Load:** **Gradient:** **Seating Time:** **Flow Direction:**	250 0.1 100 hours MD

Test Results:

Roll No.	Pressure, psf	Gradient	Transmissivity, m^2/sec
			100 hours
66381010001	250	0.1	3.96×10^{-4}
66381010060			4.04×10^{-4}
66381010120			4.55×10^{-4}

POLYETHYLENE RESIN CERTIFICATION

Customer Name : Plastic Fusion Fabricators, Inc.
Project Name : Solutia Landfill Closure, AL
Geocomposite Manufacturer : SKAPS Industries
Geocomposite Production Plant : Commerce, GA
Geocomposite Brand Name : TN 240-2-8

We, the Geonet Manufacturer, hereby certify the following for the material delivered to the above referenced project:

Resin Supplier	Resin Production Plant	Resin Brand Name	Resin Lot Number	Property	Test Method	Units	Resin Supplier Value	Tested Value*
M. Holland & Company	Chevron, TX	HDPE	ECUX 881012	Density	ASTM D1505	gm / cc	0.9530	0.9527
				Melt flow Index	ASTM D1238[(a)]	gm / 10 min	0.25	0.22

* No reclaimed polymer is added to the resin during the manufacture of the geonet components assigned to this project.

(a) Condition 190/2.16
* Data from SKAPS Quality Control

571 Industrial Parkway, Commerce, GA 30529 Ph : 706-336-7000 Fax : 706-336-7007 Email : contact@skaps.com

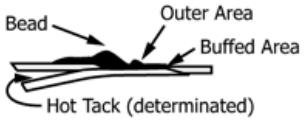
APPENDIX I

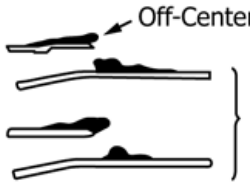
GEOMEMBRANE DESTRUCTIVE SEAM TESTING

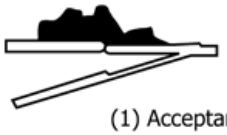
SUMMARY OF BREAK CODES

Reference: ASTM D6392-12



Schematic of Untested Specimen





Types of Break	Location of Break Code	Break Description
	AD	Adhesion Failure
	BRK	Break in sheeting. Break can be in either top or bottom sheet.
	SE1	Break in outer edge of seam. Break can be in either top or bottom sheet.
	SE2	Break at inner edge of seam through both sheets.
	AD-BRK	Break in first seam after some adhesion failure. Break can be in either top or bottom sheet.
	SIP	Separation in the plane of the sheet. Break can be in either top or bottom sheet.

Locus-of-Break Codes for Dual Hot Wedge Seams in Unreinforced Geomembranes Tested for Seam Strength in Shear and Peel Modes

Schematic of Untested Specimen

Types of Break	Location of Break Code	Break Description
	AD1	Failure in adhesion. Specimens may also delaminate under the bead and break through the thin extruded material in the outer area.
	AD2	Failure in adhesion.
	AD-WLD(1)	Break through the fillet.
	SE1	Break at seam edge in the bottom sheet (applicable to shear only).
	SE2	Break at seam edge in the top sheet (applicable to shear only).
	SE3	Break at seam edge in the bottom sheet (applicable to peel only).
	BRK1	Break in the bottom sheeting. A "B" in parebtheses following the code means the specimen broke in the buffed area.
	BRK2	Break in the top sheeting. A "B" in parebtheses following the code means the specimen broke in the buffed area.
	AD-BRK	Break in the bottom sheeting after some adhesion failure between the fillet and the bottom sheet.
	HT	Break at the edge of the hot tack for specimens which could not be delaminated in the hot tack.
	SIP	Separation in the plane of the sheet.

(1) Acceptance of AD-WLD breaks may depend on whether test values meet a minimum specification value.

Golder Associates Inc. (Golder) has completed our review of the submittal identified on the preceding page, submitted by Taylor Corporation (Taylor) for the OU-3 Remedial Action Cover Systems Project. The submittals were reviewed against the requirements set forth in the Technical Specifications. Golder has the following comments:

Submittal No. S1-4 dated 7/17/2015 :

Taylor Corporation (Taylor) submitted two (2) bulk samples of proposed topsoil material collected from a stockpile at the Oxford Recreation Complex. The material was transported to Atlanta, GA on May 28, 2015 for geotechnical testing by ATC Associates. Samples were tested for grain size distribution, pH, plasticity, and organic content. Results and testing requirements are listed below.

Two composite samples were also collected for chemical screening and results have been summarized and sent to the Environmental Protection Agency (EPA) for approval. Approval from the EPA is pending.

Table 1 – Summary of Topsoil Geotechnical Requirements

Test Description	ASTM Standard	Requirement	Reference
Particle Size	D422	Not contain stones, lumps, roots, or similar objects larger than 1 inch in any dimension	CQAP Table 4.1 Spec 31 00 01 Section 2.4 C 1.
pH	D4972	5.8 to 7.6	CQAP Table 4.1 Spec 31 00 01 Section 2.4 C 2.
Organic Content	D2974	3.0% to 5.0%	CQAP Table 4.1 Spec 31 00 01 Section 2.4 C 3.
USCS Classification	D2488	--	CQAP Table 4.1
USDA Textural Classification	--	Loam, sandy loam, or silty loam	Spec 31 00 01 Section 2.4 B

Table 2 – Summary of Topsoil Geotechnical Testing Results

Sample	Maximum Particle Size (in)	pH	Organic Content (%)	Liquid Limit (%)	Plasticity Index (%)	USCS Classification	USDA Textural Classification
TS-1	**0.4 – 0.2**	**7.2**	**2.06**	**29**	**6**	**ML**	**Loam**
TS-2	**0.4 – 0.2**	**6.3**	**2.29**	**32**	**12**	**CL**	**Silty Loam**

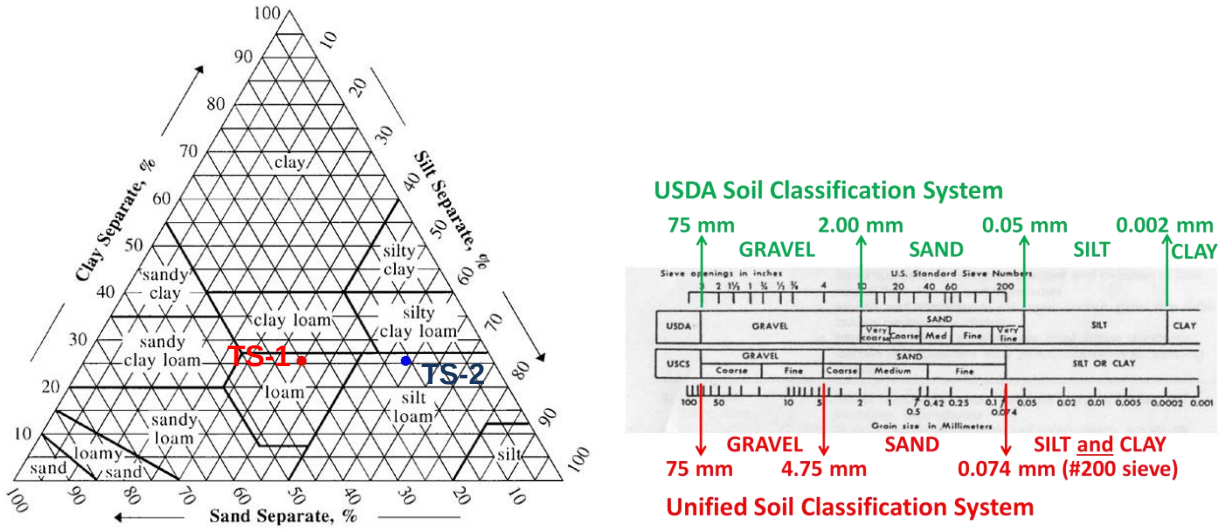

Figure 1 - USDA Textural Classification Chart and Grain Size Definitions

The proposed borrow area soil meets the requirements for soil type, particle size, and pH; however it does not meet the organic content requirements set forth in the Technical Specifications. Golder recommends Taylor submit a plan for increasing the organic content in the topsoil source with the use of an industry-approved amendment process.

GAI Submittal No. S1-4

Golder Associates Inc. (Golder) has completed our review of the submittal identified on the preceding page, submitted by Taylor Corporation (Taylor) for the OU-3 Remedial Action Cover Systems Project. The submittals were reviewed against the requirements set forth in the Technical Specifications. Golder has the following comments:

Submittal No. S1-4.1 dated 12/11/2015 :

Taylor Corporation (Taylor) submitted three (3) samples of the proposed topsoil material collected from a stockpile at the Oxford Recreation Complex. The material was transported to Atlanta, GA on December 3, 2015 for geotechnical testing. Samples were tested for pH and organic content. Results and testing requirements are listed below.

The topsoil material is satisfactory for use on the OU-3 Cover Systems Project. Lime soil amendment should be used in conjunction with final seeding to modify soil pH based on seed mix and the Technical Specifications.

Table 1 – Summary of Topsoil Geotechnical Testing Results

Sample	pH	Organic Content (%)
TS-2	5.5	3.8
TS-3	5.8	3.1
TS-4	5.9	3.3

The Technical Specifications require the topsiol material to have a pH between 5.8 and 7.6 and have a minimum organic content of 3 percent by weight and a maximum organic content of 5 percent by weight.

Services Requested By:	Robby Brown with Brown Construction Company
Concrete Contractor:	Brown Construction Company
Concrete Placement:	Slab-on-grade
Observation Location(s):	Autoclave area see drawing
Concrete Type:	3000-psi, air-entrained concrete (Mix ID: RM3002)
Method of Placement:	Chute
Method of Consolidation:	Vibratory screed
Tests Performed:	Concrete slump, air, temperature and unit weight measurements were performed and the results were in accordance with project specifications.
Test Specimens Fabricated:	A total of 4 compressive strength specimens [Set No(s).: 1] were fabricated during today's concrete activities.
Summary:	Based on our observations, cast-in-place concrete construction activities at the above-referenced locations appeared to be completed in general accordance with the project plans and specifications.

Project

Solutia OU-3 Remediation
Clydesdale Avenue
Anniston, AL

Project Number: E1151124

Services Requested By:	Robby Brown with Brown Construction
Concrete Contractor:	Brown Construction
Concrete Placement:	Slab-on-grade
Observation Location(s):	Autoclave area see drawing
Concrete Type:	3000-psi concrete supplied by Webb (Mix ID: RM3002)
Method of Placement:	Pump
Method of Consolidation:	Vibratory screed
Tests Performed:	Concrete slump, air, temperature and unit weight measurements were performed and the results were in accordance with project specifications.
Test Specimens Fabricated:	A total of 8 compressive strength specimens [Set No(s).: 1, 2] were fabricated during today's concrete activities. 4 cylinders were cast by the contractor prior to Terracon technician's arrival.
Summary:	Based on our observations, cast-in-place concrete construction activities at the above-referenced locations appeared to be completed in general accordance with the project plans and specifications.

CONCRETE COMPRESSIVE STRENGTH TEST REPORT

Report Number: E1151124.0084A
Service Date: 03/02/16
Report Date: 03/10/16 Revision 1 - 7-day results
Task:

Terracon
110 12th St N
Birmingham, AL 35203-1537
205-942-1289

Client

Taylor Corporation
Attn: Ellis Bennett
PO Box 3424
Oxford, AL 36203

Project

Solutia OU-3 Remediation
Clydesdale Avenue
Anniston, AL

Project Number: E1151124

Material Information

Specified Strength: 4,000 psi @ 28 days

Mix ID:
Supplier:
Batch Time: 0730 **Plant:**
Truck No.: 133 **Ticket No.:** 116461

Sample Information

Sample Date: 03/02/16 **Sample Time:** 0800
Sampled By: Kerry Cobb
Weather Conditions: clear
Accumulative Yards: 3 **Batch Size (cy):** 3
Placement Method: Chute
Water Added Before (gal): 0
Water Added After (gal): 0 **Slump After (in):** 5
Sample Location: upper valve vault walls see drawing
Placement Location: same

Field Test Data

Test	Result	Specification
Slump (in):	5	
Air Content (%):	5.5	
Concrete Temp. (F):	60	
Ambient Temp. (F):	45	
Plastic Unit Wt. (pcf):	144.8	
Yield (Cu. Yds.):		

Laboratory Test Data

Set No.	Specimen ID	Avg Diam. (in)	Area (sq in)	Date Received	Specimen Weight (lbs)	Date Tested	Age at Test (days)	Maximum Load (lbs)	Compressive Strength (psi)	Fracture Type
34	A	4.00	12.57	03/03/16	8.68	03/05/16	3	44,010	3,500	2
34	B	4.00	12.57	03/03/16	8.53	03/09/16	7	49,560	3,940	2
34	C	4.00	12.57	03/03/16		03/30/16	28			
34	D			03/03/16			Hold			

Comments: n/a

Project

Solutia OU-3 Remediation
Clydesdale Avenue
Anniston, AL

Project Number: E1151124

Services Requested By:	Robby with Brown Construction
Concrete Contractor:	Brown Construction
Concrete Placement:	Slab-on-grade
Observation Location(s):	Slab @ uuper valve vault area A see drawing
Concrete Type:	4000-psi, air-entrained concrete supplied by Webb (Mix ID: RM4000)
Method of Placement:	Chute
Method of Consolidation:	Vibratory screed
Tests Performed:	Concrete slump, air, temperature and unit weight measurements were performed and the results were in accordance with project specifications.
Test Specimens Fabricated:	A total of 4 compressive strength specimens [Set No.: 36] were fabricated during today's concrete activities.
Summary:	Based on our observations, cast-in-place concrete construction activities at the above-referenced locations appeared to be completed in general accordance with the project plans and specifications.

NOTES

1. EXISTING STRUCTURES AND UTILITIES WILL REMAIN IN PLACE UNLESS SPECIFICALLY INDICATED OTHERWISE
2. SEE SHEETS 10, 11 AND 12 FOR TYPICAL CONNECTION DETAILS
3. SEE SHEET 11 FOR EROSION AND SEDIMENT CONTROL DETAILS
4. GRADES SHOWN REPRESENT APPROXIMATE TOP OF THE FINAL COVER SYSTEM. THE FINAL COVER ELEVATIONS WILL DEPEND ON THE THICKNESS OF THE SUBGRADE PREPARATION MATERIAL PLACED UNDER THE GEOMEMBRANE TO MEET THE REQUIREMENTS OF THE TECHNICAL SPECIFICATIONS AND TO PROVIDE POSITIVE DRAINAGE AS SHOWN. THE THICKNESS OF THE COVER SYSTEM WILL BE 18" ABOVE THE COVER GEOSYNTHETICS.
5. GROUNDWATER MONITORING WELLS, FIRE HYDRANTS, AND VALVES WILL BE EXTENDED AND WILL REMAIN IN PLACE.
6. LIMIT OF LINED AREA IS DEFINED BY EXISTING EDGE OF GRASS (AREAS A AND E), GRAVEL SHOULDER OR EXISTING FENCE (AREA A).
7. AREA A GEOMEMBRANE LINED AREA IS 168,300 SQ FT, AND THE CONCRETE CAPPED AREA IS 9,321 SQ. FT. AREA E GEOMEMBRANE LINED AREA EXCLUDING FUTURE CONTROLS BUILDING IS 21,532 S.F.
8. NEW AND EXISTING FENCE AROUND AREA A IS NOT SHOWN IN THIS DRAWING FOR CLARITY. REFER TO SHEET 13 FOR NEW FENCE LOCATION.
9. CONTRACTOR WILL COORDINATE WITH OWNER TO REMOVE SIGN, EXTEND ITS FOUNDATION TO ELEVATION 763 FT. MSL (MIN.) AND REINSTALL SIGN.
10. FOR VAULT AREAS WHICH REQUIRE RAISES, THE OWNER WILL SELECT THE VAULT COVER TYPE AS NEEDED FOR ACCESS AND SAFETY REQUIREMENTS.

SENT VIA FEDERAL EXPRESS

Mr. Chip Crockett
Alabama Department of Environmental Management
Industrial Hazardous Waste Branch
Land Division
1400 Coliseum Boulevard
Montgomery, Alabama 36130-1463

Re: Summary of Well Abandonment Procedures (OWR-6D)
Solutia Inc., Anniston, Alabama; EPA ID/Permit Number – ALD004019048

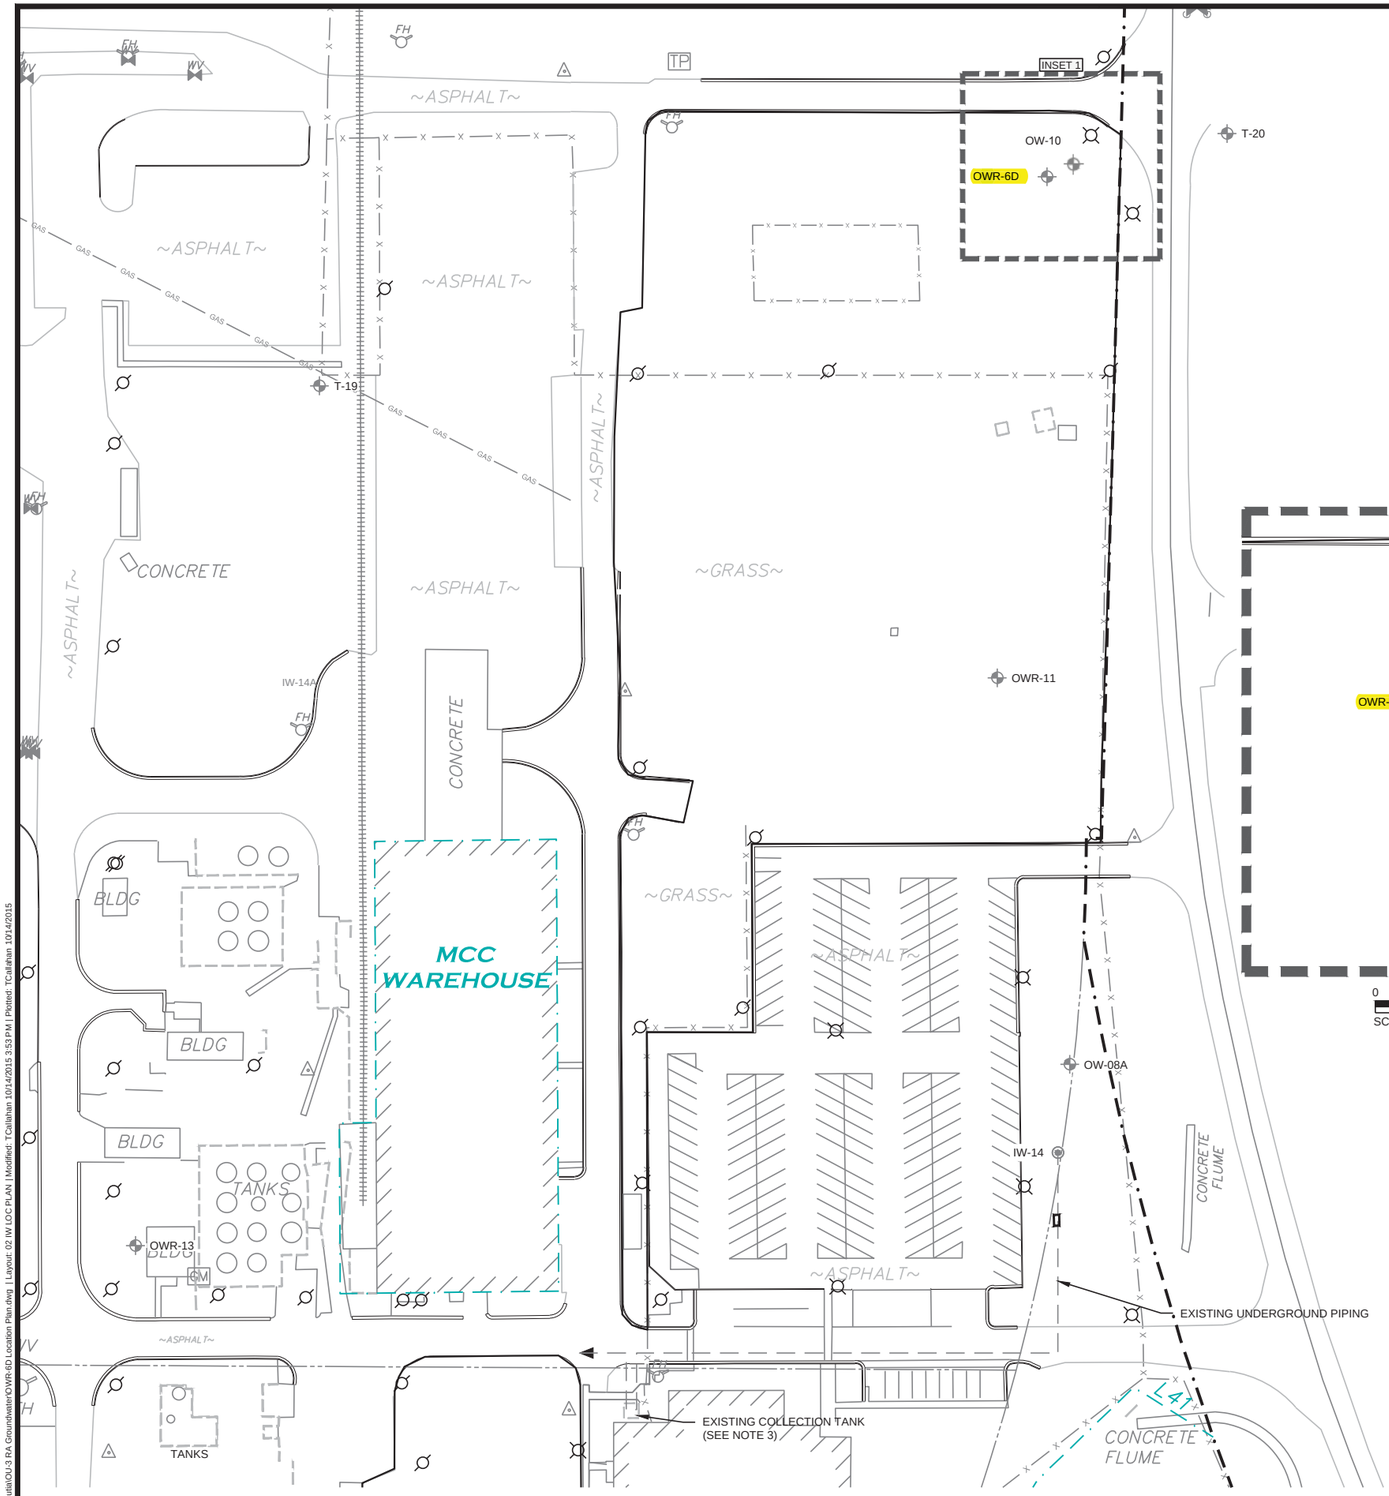
Dear Mr. Crockett:

Solutia Inc. (Solutia) is providing this letter to describe the procedures used to abandon a former observation well (OWR-6D) at its production facility (facility) in Anniston, Alabama. As approved by the United States Environmental Protection Agency (EPA) and the Alabama Department of Environmental Management (ADEM), this well was abandoned as it is no longer sampled as part of the groundwater monitoring program, and it is located within the limits of one of the proposed cover systems for the Operable Unit 3 Remedial Action (RA) currently being conducted at the facility. The abandonment work was performed during the week of August 10, 2015. A licensed Alabama water well drilling contractor (Cascade Drilling, L.P.) performed the work, with oversight provided by Golder Associates, Inc. (Golder). The well consisted of 10-inch diameter steel casing from the ground surface to approximately 35 feet below ground surface (ft-bgs). The remaining portion of the well was uncased (4.25 inches in diameter). The reported total depth of the well was approximately 65 ft-bgs. The static water level at the time of abandonment was 20 ft-bgs. Figure 1 shows the former location of the well at the Site, and Attachment A includes the boring and well installation log for OWR-6D.

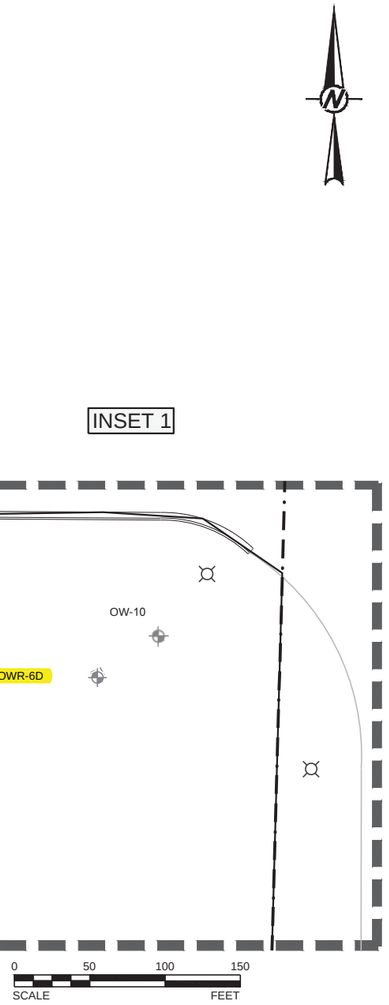
The portion of the well that included the 10-inch diameter steel casing was drilled out using an 8-inch diameter drill bit. The lower, uncased portion of the well was drilled out using a 6-inch diameter drill bit to a depth of 67 ft-bgs. The well was abandoned by tremie-grouting the well from the bottom to top using a cement-bentonite grout mix.

Surface completion was then performed and included removing and destroying the existing concrete pad and cutting the 10-inch casing flush at the ground surface. The well location will be covered with six inches of clean fill, a geomembrane liner, and 18-inches of cover soil as part of Solutia's RA Cover System Project. A schematic of the abandoned well is included as Figure 2.

If you should have any questions or need additional information, please don't hesitate to contact me at (256) 231-8404.



Sincerely,



E. Gayle Macolly
Manager, Remedial Projects
Solutia Inc.

WELL SKETCH

INSTALLATION NOTES

Installed and grouted 10" dia. steel surface casing to 35' BGS with 12 1/4" dia. augers. Resumed boring with 4 1/4" dia. augers to 65' BGS. Installed 10' of 2" dia., 0.008 slot PVC screen and 60' of 2" dia. PVC riser to 65' BGS. Tremmied 9 bags of sand to ~53' BGS. Poured (1) 5 gal. buckets of bentonite pellets to ~50.5' BGS. Grouted remainder of open annulus with 95%-5% cement bentonite grout mixture. Installed locking aluminum protective casing and 3' x 3' concrete pad for surface finish.

WELL DEVELOPMENT NOTES

Well made very little water and recovered slowly. Surged and pumped as recovery allowed over 3 week period. Minimum of 6 well volumes removed.

ENCLOSURE SPECIFICATIONS

STANDARD PRE-ASSEMBLED PRECAST CONCRETE BUILDING

PART 1 - GENERAL

1.01 SUMMARY

Contractor to furnish precast concrete *transportable* building. Building to be delivered and placed on owner's prepared foundation in accordance with manufacture's recommendations (PART 3). Precast building to be manufactured by AES PRECAST CO., INC., 3851 17th Street, Northport, AL 35476. Building to be provided by manufacturer with all necessary openings as specified by contractor in conformance with manufacturer's structural requirements.

1.02 QUALITY ASSURANCE

A. ACI-318-08, "Building Code Requirements for Reinforced Concrete". Concrete Reinforcing Institute, "Manual of Standard Practice".

B. ANSI/ASCE-7-05 "Building Code Requirements for Minimum Design Loads in Buildings and Other Structures".

C. Alabama State Building Codes

D. UL-752 Test Method Level Four (4) for Bullet Resistance certified by an Independent Structural Engineer.

E. Concrete Reinforcing Institute, "Manual of Standard Practice".

F. Building fabricator must have a minimum of 5-years experience manufacturing and setting transportable precast concrete buildings.

G. PCI Design Handbook – 6th Edition.

H. International Building Code.

I. National Electrical Code.

J. Manual of Steel Construction – LRFD AISC – 13th Edition.

K. Manual of Steel Construction – ASD AISC – 13th Edition.

1.03 DIMENSIONS & DESIGN LOADS

A. Dimensions:

Exterior: 8'-0"W x 8'-0"L x 9'-6"H

Interior: 7'-4"W x 7'-4"L x 8'-0"H

Walls are 4" Thick; Floor is 6" Thick (plus 5" curb for sump); Roof is 6" @ Center and 4" @ Edge, giving a 2" slope from center to edge.

B. Design Loads:

1. **Seismic load performance category 'C', Exposure Group III**
2. **Standard Live Roof Load - 60 PSF**
3. **Standard Floor Load - 250 PSF**
4. **Standard Wind Loading - 150 MPH**

C. Roof: Roof panel shall slope 2" from center to edge. The roof shall extend a minimum of 2½" beyond the wall panel on each side.

D. Roof, floor and wall panels must each be produced as single component monolithic panels. No roof, floor, or vertical wall joints will be allowed, except at corners. Wall panels shall set on top of floor panel.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Concrete: Steel-reinforced, polypropylene fiber reinforced, 6000 PSI minimum 28-day compressive strength, air-entrained (ASTM C260).

B. Reinforcing Steel: ASTM A615, grade 60 unless otherwise indicated.

C. Reinforcing Fiber: Polypropylene fiber, Fibermesh @ 1.5 pounds per cubic yard.

D. Caulking: All joints between panels shall be caulked on the exterior and interior surface of the joints. Caulking shall be SIKAFLEX-1A elastic sealant.

E. Panel Connections: All panels shall be securely welded together with 1/4" thick steel brackets. Steel is to be of structural quality, hot-rolled carbon complying with ASTM A283, Grade C. Cast-in anchors used for panel connections to be Dayton-Superior #F-63, or equal.

F. Curb: On interior of building there shall be a continuous curb poured around the entire perimeter. Curb shall be steel reinforced and bonded to the floor slab with an epoxy bonding agent. Curb shall have a dimension of 5"W x 6H". Sump area shall be coated with two-part epoxy.

2.02 ACCESSORIES

A. Doors and Frames: The building shall be equipped with one SINGLE 3'-0" x 7'-0" x 1 ¾" Galvanized Steel Doors and frame, insulated.

Door Hardware:

1. Hinges: Stainless Steel Vandal Proof (primed with non-removable hinge pins), 3 per door.

2. Lock Set: Panic Exit Device Mortise Lock with 6 pin removable core.

3. Threshold: Aluminum threshold with neoprene seal.

4. Door Stop: Hydraulic Door Closer.

5. Drip Cap: National Guard 16A.

2.03 FINISHES

A. Interior of Building: Floor – Concrete with Smooth Finish, Painted with Epoxy, Gray. Walls and Ceiling – Concrete with Smooth Finish, Painted with Epoxy, White.
B. Exterior of Building: Concrete with Exposed Aggregate River Rock and Painted Trim, Tan.
C. Roof to have smooth trowel finish sealed with a liquid applied roofing system, White.

2.04 ELECTRICAL

A. (2) Interior 2-bulb 4' Wet Location Fluorescent Light Fixtures, separate circuits on separate switches.
B. (1) Exterior 70W HPS Light Fixture, on Photocell with shut-off switch.
C. (1) Exterior Alarm Light, Shipped loose in building to be installed on site by others – PLEASE CHOOSE COLOR.
D. (3) Interior 20A GFCI Duplex Receptacles.
E. (1) Interior Electrical Panel 150A 30 Circuit Main Breaker NEMA 3R, with Bolt-In Breakers. Note: Wiring to be in Surface Mounted RMC.

2.05 VENTILATION

A. (1) 12" Shutter Mounted Exhaust Fan, on Thermostat with shut-off switch, with Rain Hood and Screen.
B. (1) 12"x12" Intake Gravity Damper, with Rain Hood and Screen.

2.06 A/C

A. N/A

2.07 HEATING

A. (1) 3kW Electric Utility Heater, Wall Mounted, on Thermostat with shut-off switch.

2.08 PLUMBING

A. N/A

2.09 MISCELLANEOUS

A. Containment Sump per Drawing.
B. PLEASE CONFIRM SIZE AND LOCATION OF ALL OPENINGS BEFORE PRODUCTION.

PART 3 - EXECUTION

3.01 SITE PREPARATION (Standard Pre-assembled Building)

A. AES Precast Building shall bear fully on a crushed stone base that is at least one foot larger than the length and width of building.

B. Stone shall be a minimum of 4" thick or down to firm subgrade. Substrate below stone must have a vertical soil capacity of 1,500 pounds per square foot. Stone shall be 3/8" or smaller and placed within a perimeter form with flat and level top edge for screeding, such as concrete curbing, railroad ties, or compacted earth.

C. Stone must be screeded to level within 1/4" in both directions. Forming material shall remain around stone after the building is set.

D. The crushed stone base shall be kept within the confines of the soil or perimeter form. Do not allow the stone base to become unconfined so that it may wash, erode or otherwise be undermined.

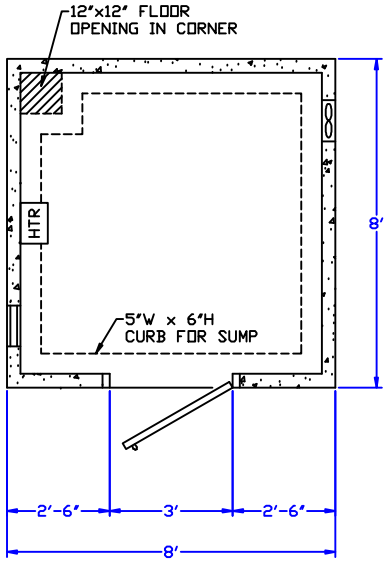
~~***OR***~~

~~**3.02 SITE PREPARATION (Standard, Pump House, and Expanded Pre-assembled Building)**~~

~~**A. AES Precast Building shall bear fully on pavement or concrete slab that has length and width equal to or greater than that of the floor of the building.**~~

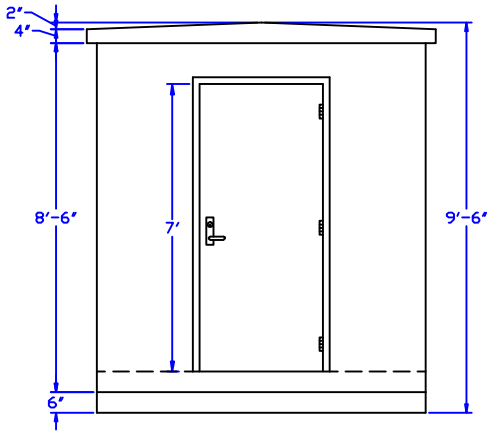
~~**B. Substrate below pavement or slab must have a vertical soil capacity of 1,500 pounds per square foot, and covered with 6 mil vapor barrier. Concrete slab should be poured 4" thick with 12" turndown footing on all sides, using 3,000 PSI concrete, and reinforced with W4 x W4 – 4" x 4" wire mesh.**~~

~~**C. Pad or slab should be level to 1/8" in all directions.**~~



~~**D. Provide positive drainage for the pad or slab as required.**~~

~~***** Site Preparation 3.02 must be followed for all Pump House and Expanded Pre-assembled Buildings.**~~



3.03 ACCESS

A. Purchaser must provide level unobstructed area large enough for crane and tractor trailer to park adjacent to pad. Crane must be able to place outriggers within 3'-0" of edge of pad and truck and crane must be able to get side-by-side under their own power. No overhead lines may be within 75' radius of center of pad. Firm roadbed with turns that allow 65' lowbed tractor and trailer must be provided directly to site. No building shall be placed closer than 2'-0" to an existing structure.

PRODUCT SPECIFICATIONS:

1-3/4" Thick steel doors shall be as manufactured by Ceco Door Products, Milan, TN USA. Doors shall conform to the Steel Door Institute guide specification, ANSI A250.8-1998; see chart below for performance classifications.

VERSADOORS are made full-flush or (optional) seamless style. Faces sheets are commercial quality cold rolled steel conforming to ASTM A366 or A620 & A568 ...or (optional) hot-dipped galvanized steel conforming to ASTM A924 and A653 -- see chart below.

Versadoor full-flush doors have mechanically interlocked, hemmed, hairline seams on vertical edges and have no visible seams on faces (S.D.I. Design 1). Doors specified "seamless" have no visible seams on faces or vertical edges (S.D.I. Design II). Face sheets are totally supported by a foamed-in-place polyurethane core. The core fills the entire door cavity and is chemically bonded to all interior surfaces. Density of foam exceeds 1.8 pcf and it has a crush strength of 3600 psf. The top and bottom door edges are closed with 16 gage steel channels welded in place.

Hardware Provisions: Hinge preparations are non-handed. Hinge edges are mortised for 4-1/2" high, standard and heavy weight hinges. 7 gage steel hinge reinforcements are welded inside the door edge and are drilled and tapped for fasteners in accordance with ANSI A156.7. Hinge closing plates are included. The lock edge is square and is prepared for Gov. series 86 or 160/161 locks in accordance with ANSI A115 (specify which). Optional closer reinforcement is a 12 gage steel channel.

Paint: 1-3/4" steel doors shall be provided with one coat of oven-cured neutral color primer paint. Primer coat shall conform with ANSI A250.10. The primer coat is a preparatory base for necessary finish painting. "Colorstyle" finish coat is also available from a selection of standard colors (optional). Colorstyle finish is electrostatically applied, oven-cured urethane enamel. For accurate color selectors ask for a Ceco Colorstyle chart.

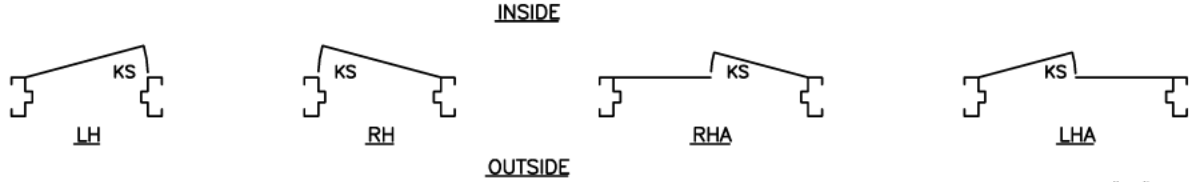
SERIES SQ, SR, AND SC STEEL FRAMES

FOR 1-3/4" DOORS
STANDARD WALL APPLICATION, HANDED



* BASIC PROFILES

* Depth, face, soffit, and backbend dimensions are variable (made to order) within limits of material and tooling. Hardware preparations are for 1–3/4" thick doors. Rabbet dimensions and hardware preparations to suit other door thicknesses are also available. Backbends need not be the same on opposite faces of basic profile, but limits of material and/or tooling may restrict certain combinations of backbends and other profile variations. Profiles are not limited to those shown ...many other designs and combinations are available.

"KS" = KEY SIDE

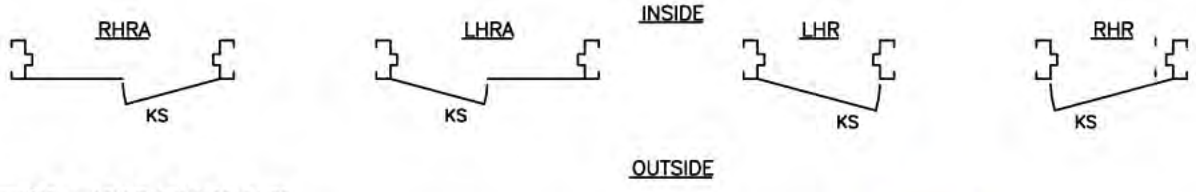
PRODUCT SPECIFICATIONS:

Steel door frames shall be as manufactured by Ceco Door Products, Milan, TN or Oklahoma City, OK, USA. They shall conform to the Steel Door Institute guide specification, ANSI A250.8-1998. See chart below for performance classifications.

Series SQ, SR, and SC frames for 1-3/4" doors are formed from commercial quality cold rolled steel conforming to ASTM A366 or A620 & A568 ...or (optional) hot-dipped galvanized steel conforming to ASTM A924 and A653 - see chart below.

3 piece door frames are shipped knocked down or welded. Transoms, sidelites and borrowed lites are welded unit type with all exposed welds ground smooth. Oversize frames are shipped in multiple units for field splicing. Integral door stops are 5/8" high. Double rabbet (SQ), single rabbet (SR), or cased opening (SC) profiles are sized to suit wall applications. Elevations conform with approved Ceco shop drawings. Jamb anchors are available for new masonry, wood stud, metal stud or existing opening wall conditions (indicate which). Floor anchors or extra jamb anchors are provided to anchor sill.

Hardware Provisions: Frames are handed. Hinge jambs are mortised for 4-1/2" or 5" high, standard or heavy weight hinges (specify which). 7 gage steel reinforcements are welded in place and are drilled and tapped for fasteners in accordance with ANSI A156.7. The strike jamb is prepared for 4-7/8" universal strike in accordance with ANSI A 115.1 & 2. Plaster guards are 26 gage steel. Preparations for various other mechanical and electronic locks and strikes are also available. Optional hardware reinforcement (e.g. closer/holder) is 12 gage steel welded in place (designate hardware). 3 door mutes are provided per strike jamb and 2 for double swing heads.



Paint: Steel door frames are provided with one coat of oven-cured neutral color primer paint. Primer coat shall conform with ANSI A250.10 . The primer coat is a preparatory base for necessary finish painting.

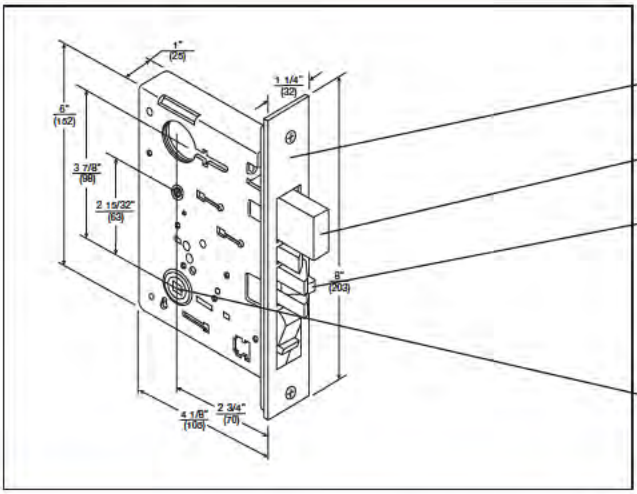
Packing:

All standard weight full mortise non-ferrous hinges are packed with all machine x 1/2 wood screws. Steel hinges (except USP) are packed all machine x all wood screws. For special screws consult price book on availability.



ANSI Cross Reference:

A2112 Brass, Bronze
A5112 Stainless
A8112 Steel

Recommended for standard weight, medium frequency doors, or doors with closing devices.

FACTS AND FIGURES

8700/SL8700 SERIES

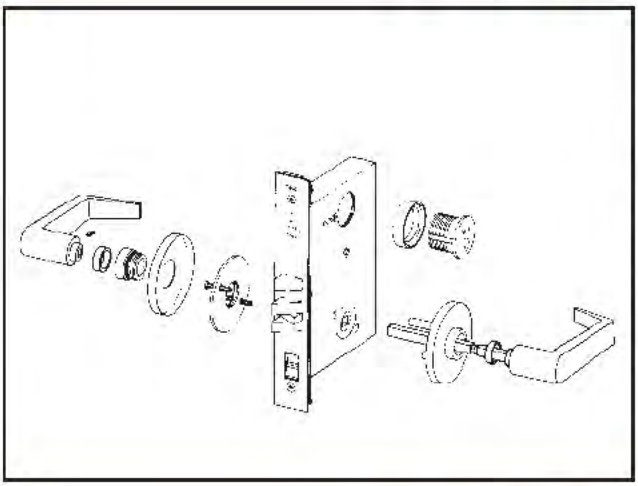
ANSI Conformance - ANSI A 156.13, Series 1000, Operational Grade 1. (SL8700 meets Security Grade 1.)

Armor Front - 8" x 1-1/4"

Door Thickness - 1-3/4" standard, to 3-1/4" thick doors to order.

Deadbolt - 1" throw, stainless steel with two enclosed hardened-steel roller armor pins.

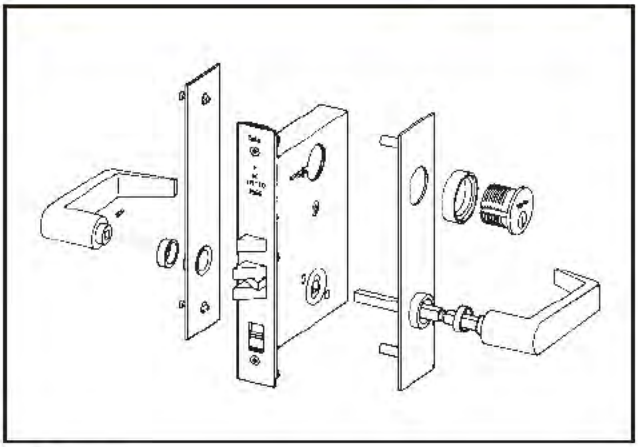
Latchbolt - 3/4" throw, stainless steel two-piece anti-friction camming action.



UL Listed - for application on labeled fire doors.

Backset - 2-3/4" only.

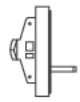
Case - wrought steel, zinc dichromated.

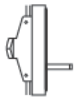


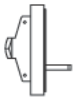
Hubs - sintered steel, copper infiltrated for additional strength.
Knobs: 5/16" standard, 3/8" to order.
Levers: 3/8" standard.
(SL8700 - available in levers only.)

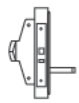
SECTIONAL LEVER INSTALLATION

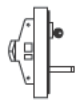
- All Yale® 8700 Series sectional lever trims feature through-bolted installation. This ensures positive alignment of the trim with the lock case and offers an attractive appearance.
- Outside trim is held in place by threaded posts. The posts fit through holes in the lock case and are secured by through-bolts from the inside trim.
- It is possible to install split trim, i.e. knob outside and lever inside, or vice versa.
- Since self-aligning trim is easy to install, on-the-job labor costs may be reduced.
- Each mortise lock ordered with lever trim features an internal heavy-duty spring cartridge which prevents lever sag.
- All *Yale* mortise lock trims are UL listed for fire door applications.
- A variety of sectional lever designs are available as shown on pages 6-8.

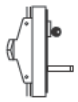


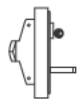


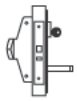


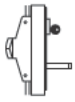


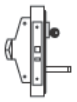


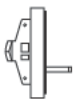


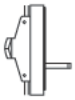


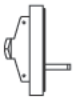


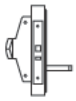












ESCUTCHEON LEVER INSTALLATION

- All *Yale* 8700 Series escutcheon lever trims feature through-bolted installation.
- Outside trim is held in place by threaded posts. The posts fit through the door and are secured by through-bolts from the inside trim.
- *Yale* outside escutcheon trims have no visible screws – a great deterrent to vandalism.
- It is poss ble to install split trim, i.e. knob outside and lever inside, or vice versa.
- Each mortise lock ordered with lever trim features an internal heavy-duty spring cartridge which prevents lever sag.
- All *Yale* mortise lock trims are UL listed for fire door applications.
- A variety of escutcheon lever designs are available as shown on pages 6-8.

7130(F) MORTISE

The 7130(F) is an exit device integrated with the Yale® 8700 Series Mortise Lock for use on single doors or active leaf of a pair of doors where life safety and extra security are required. The 8700 Series Mortise Lock used is modified for use with the exit device only. The standard 8700 mortise lock cannot be used.

CERTIFICATION/COMPLIANCE

UL/cUL Listed: FVSR/FVSR7 - Panic hardware
GXHX/GXHX7 - Fire exit hardware (F)
(4' x 8' single, 8' x 8' pairs, 3 hr.)
(4' x 9' single, 8' x 9' pairs, 1-1/2 hr.)

ANSI Certified: A156.3 Type 3, Grade 1

BHMA Listed: Directory of Certified Products

FEATURES

- Designed for wide stile and flush doors
- Handed; specify hand
- Two-piece mechanical 3/4" throw deadlocking stainless steel latchbolt
- Easily disassembles for maintenance and service
- Available in double cylinder function

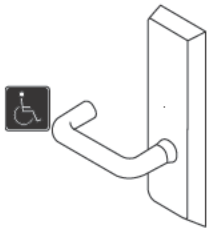
APPLICATIONS

- Single swing doors
- Pairs of doors with vertical rod devices or automatic flush bolts
- Metal, wood or compatible door materials

Order As Follows, According To Function.	
7130-K5(F)	(01) Exit only
	(02) Entry by pull or rigid knob when dogged.
	(03) Key retracts latchbolt
	Electrical control for 552F and 652F knob trim, w/wo key override.
7130-L5(F)	(02) Entry by rigid lever when dogged.
	(03) Key retracts latchbolt.
	Electrical control for 556F and 652F lever trim, w/wo key override.
7130-T5(F)	(02) Entry by pull when dogged. (03) Key retracts latchbolt.
7130-K8(F)	(08) Entry by knob lock/unlocked by key or knob only (passage)
7130-L8(F)	(08) Entry by lever lock/unlocked by key or lever only (passage)
7130-L8(F)-2	(08) Entry by lever lock/unlocked by key either side or lever only (passage)
7130-T8(F)	(05) Entry by thumbpiece lock/unlocked by key or thumbpiece only (passage)

SPECIFICATIONS

Door Opening Width:	-36 for 30" - 36" (762 - 914mm) doors -48 for 36-1/2" - 48" (927 - 1219mm) doors Optional sizes can be special ordered. Consult Technical Product Support.
Door Thickness:	1-3/4" (44mm) standard. 2" and 2-1/4" (51mm and 57mm) optional; specify when ordering.
Minimum Stile Width:	4-1/2" (114mm)
Projection:	3-1/4" (83mm) active, 2-3/4" (70mm) dogged
Latchbolt:	Two piece mechanical 3/4" (19mm) deadlocking stainless steel with anti-friction insert and auxiliary deadlocking latch
Strike:	Curved lip, non-handed 798. Optional 712 for door pairs with astragals. Optional 718 open back strike.
Fasteners:	Machine screws and wood door fasteners standard for panic hardware. Sex nuts and bolts supplied standard for fire exit hardware.
Trims:	650F Series heavy-duty trim (recommended), 550F utility trim, 560F cylinder x pull/thumbpiece trim. See pages 15-17.
Electric Strikes:	Compatible with Folger Adam® 300, 500, 600, 700 Series strikes (consult factory for specific model).
Options:	Cylinder dogging, Shim Kit # 723, Sex Nuts and Bolts.
Warranty:	5-year limited.



7100 SERIES EXIT DEVICE TRIM

620F/650F SERIES HEAVY-DUTY TRIM

Yale's heavy-duty exit device trim features vandal resistant Free-Wheeling trim to be used for high-frequency applications or on doors subject to abuse. Free-Wheeling is not available on mortise trim.

- Trim through-bolts to exit device for strength.
- Beveled sides improve attack resistance.
- Solid forged escutcheon resists vandalism and abuse.
- Flush cylinder in 6-pin applications for additional security.
- 1-3/4" (44mm) door standard. For doors through. 2-1/4" (57mm) or shim-mounted devices, specify on order.
- Dimensions: 3' x 10-1/4" x 13/16" (76mm x 260mm x 19mm).
- See page 44 for cylinder options. 1-1/2" mortise cylinder required for mortise trim.
- Available with AR, AU, CR, JN, MO, PB, PN, VI lever designs. See page 17.
- Trim ordering example: AU626F x 626 x RHR.
- 5-year limited warranty.

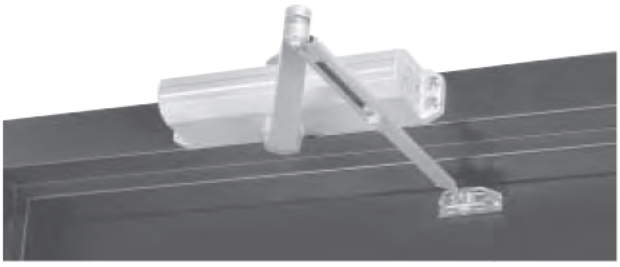
Spring omitted for illustration purposes

Compliance Standards

The series 1601BF door closers are designed to comply with requirements of the Americans with Disabilities Act (A.D.A.) and ANSI standard A117.1. All series 1600BC/1601(BF) comply with ANSI A156.4 Grade 1 Specification. (UL) All *Norton* series 1600BC/1601(BF) closers with non-hold open arms are listed by Underwriters` Laboratories for labeled fire doors. This includes compliance to UL10C and UBC-72 (1997) for 3-hour assemblies. These products are manufactured in a certified ISO 9001 facility. These closers are also listed by California State Fire Marshal and New York City Materials and Equipment Acceptance Division.

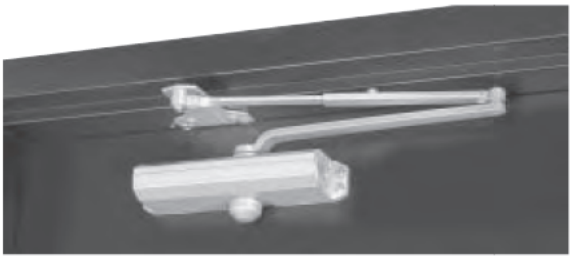


*Non-hold open arm shown.

Regular Arm

This is the only pull-side application where a double lever arm is used. It is the most power-efficient application for a door closer. Sufficient frame, door and/or ceiling clearance must be considered.

Since the arm assembly projects directly out from the frame, this application may present an aesthetics issue or be prone to vandalism.



*Non-hold open arm shown.

Top Jamb

For efficiency reasons this application provides the best alternative to the regular arm application. There must be sufficient frame face and/or ceiling clearance for this application. It requires a top rail on the door of just 2-1/8" (54mm). This application provides the best door control for doors in exterior walls that swing out of a building.

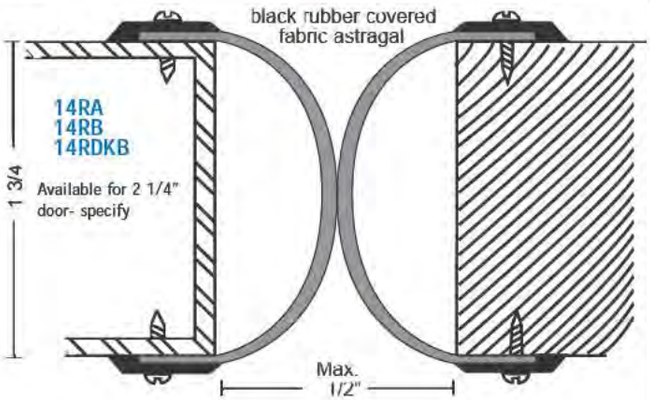
The entire door closer and arm assembly project from the frame, similar to the regular arm application, where the matters of appearance and malicious abuse can be of concern.

Consideration must be given to depth of the frame reveal.

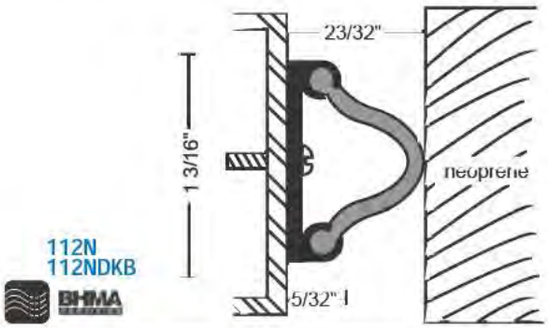
*Non-hold open arm shown.

Parallel Arm

This application provides the most appealing design appearance for a surface-mounted door closer having a double lever arm. This may also be beneficial in vandalism-prone areas. It is on the push side of the door and the arm assembly extends almost parallel to the door. In the closed position, there is very little or no hardware projecting beyond the frame face in most situations.



Due to the geometry of the arm it is approximately 25% less power-efficient than a regular arm application.



The entire closer and arm assembly are mounted below the frame stop, requiring a top rail clearance on the door of between 5-3/8" (137mm), when using a low-profile arm (1680 series), to 6-3/8" (162mm), when using the hold open arm.

LITHONIA LIGHTING®

Catalog Number	XWL232MV	
Notes		Type

Industrial Wet Location

FEATURES & SPECIFICATIONS

INTENDED USE

Designed for low to medium mounting heights. Ideal for applications where dirt, dust, humidity, moisture and cold temperatures are present. **Certain airborne contaminants can diminish integrity of acrylic.** Click here for Acrylic Environmental Compatibility table for suitable uses.

CONSTRUCTION

Rugged light gray polycarbonate housing with continuous poured gasket for an airtight seal, keeping out moisture, dust and humidity. Cold-rolled steel enclosed wireway included.

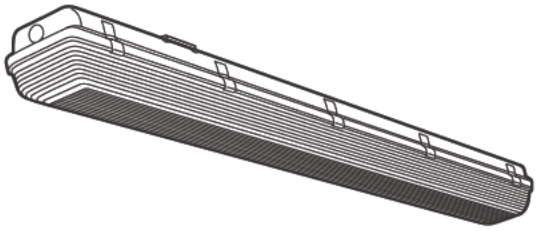
Provided with one open hole and knockout at opposite end.

OPTICS

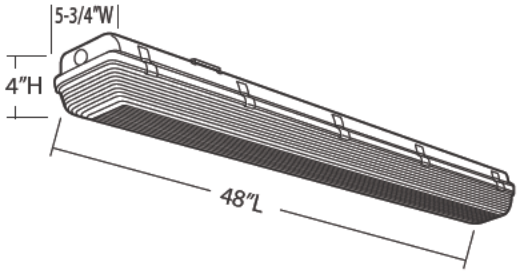
UV stablized, impact-resistant, polycarbonate lens. Ten (10) snap-fit polycarbonate latches attach the lens to the housing for a tight seal.

ELECTRICAL SYSTEM

Standard electronic ballast (120-277V, 60Hz) ensures no flickering and quiet operation.



Starts instantly down to 0°F (-18°C) with two 32W linear T8 lamps and with two 54W linear T5HO lamps (lamps not included).



INSTALLATION

Two stainless steel mounting brackets included, which allow for flush or chain mounting (chain not included).

LISTINGS

UL listed to US and Canadian safety standards. UL listed for 25°C ambient and wet locations. IP65 rated.

Pass & Seymour

legrand®

Switches
Commercial Grade
15 & 20A, 120/277VAC

CS15AC1, CS15AC3, CS20AC1, CS20AC3

Commercial ruggedness in traditional side wire switches.

Like our other commercial switches, these reliable performers feature high-strength polycarbonate toggles, single-piece brass alloy contact arms, nylon covers and heavy-gauge steel straps to withstand hard use and ensure a long service life. Fast make and positive break action minimizes arcing.

Features & Benefits

One-piece plated steel strap for corrosion-resistance.

Heavy-duty bumpers for quiet, smooth operation.

Oversized silver-alloy contacts for long life and better heat dissipation.

Heavy-duty, brass alloy, one-piece contact arm virtually eliminates contact bounce.

Shallow design for easier installation.

CS20AC1-LA

Glass-reinforced nylon back body for durability and strength.

Cam control and spring actuator for positive "makes and breaks" with a minimum of arcing.

Locking support provides resistance to face and back body separation.

Side wire with #14 – #10 AWG copper or copper-clad wire.

Field Uses/Vertical Markets

- Retail
- Office
- Hospitality/Lodging
- Multiple Dwelling

Tallpack Die Cast w/ Glass

Heavy duty die cast aluminum housing with prismatic glass refractor. HPS and Metal Halide models available. with 1/2" bottom and back conduit knockout. Factory installed photocell optional. Lamp included.

Finish: ● Architectural Bronze ○ White

HPS Tallpack

HPS "Tall" Wallpack. Vandal resistant polycarbonate housing. Heavy die-cast aluminum back plate with 1/2" bottom and back conduit knockout. Factory installed photocell optional. Lamp included.

Finish: ● Architectural Bronze ○ White

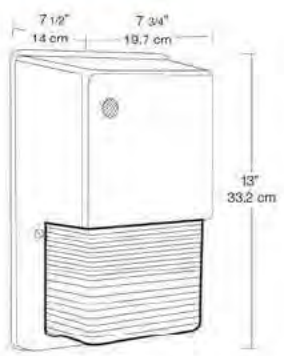
Fluorescent Tallpack

28 & 42 watt compact fluorescent Tallpack. Vandal resistant polycarbonate housing. Heavy die-cast aluminum back plate with 1/2" bottom and back conduit knockout. Factory installed photocell optional. Operating temperature 28w (-20ºF), 42w (0ºF). Lamp included.

Finish: ● Architectural Bronze ○ White

Fluorescent Smart Tallpack

28 & 42 watt compact fluorescent Tallpack with built-in mini sensor for motion activated operation. Vandal resistant polycarbonate housing. Sensor has 180º detection and controls up to 250 watts. 120 volt only. Lamp included.



Finish: ● Architectural Bronze ○ White

DESCRIPTION

Die cast aluminum construction. Wall bracket plus junction box with sturdy mounting lugs. Medium base socket, 1/2" or 3/4" NPS hub size and a variety of globes. Incandescent lamp A21 for 100 series, PS25 for 200 Series. Lamp not supplied. CFL: 13 & 22 watt lamp supplied.

SPECIFICATIONS

Colored Globe Maximum Watts:
100 watts

Maximum Watts:
150 watts

Country of Origin
Designed by RAB in New Jersey and assembled in Taiwan

Optional Reflectors:
Highly reflective white baked polyester epoxy powder finish over a heavy gauge aluminum base. Reflectors thread onto fixtures. See RV series.

Socket:
Premium porcelain with 150• C 8" leads attached. Fastened with 2 brass screws.

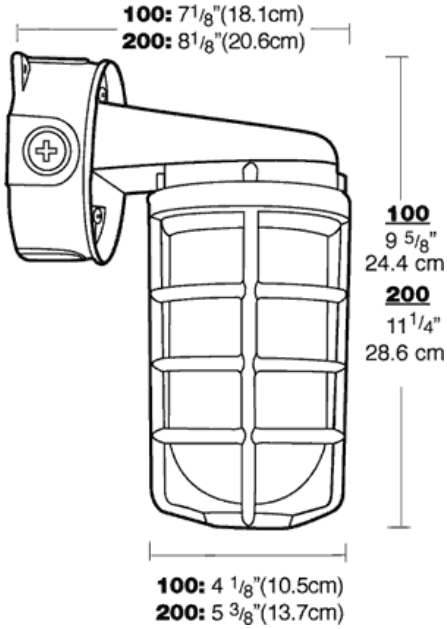
Patents:
RAB sensor and fixture designs are protected under U.S. and International Intellectual Property laws.

Wattage:
See catalog number chart for maximum wattage with clear glass, colored glass and Permaglobes.

Die Cast Guard:
Supplied with one piece die cast guard with set screw

UL Listing:
Suitable for wet locations. Suitable for use in dwellings. Suitable for use with 90• C supply wiring. Complies with UL Standard 1598. For non-hazardous locations where the lamp, socket and wiring require protection from rain, corrosive fumes, non-combustible dusts, moisture, non-explosive vapors and gases.

Globes:
Supplied with clear heat resistant glass globes unless otherwise stated. Colored and white glass globes available. Unbreakable RAB Permaglobes available in clear and in color.



Trade Agreements Act Compliant
This product is a product of Taiwan and a "designated country" end product that complies with the Trade Agreements Act.

GSA Schedule
This product is suitable for listing on the GSA Schedule of the US General Services in accordance with FAR Subpart 25.4

Color:
Natural

Weight:
4.14

GFCIs
Specification Grade
15 & 20A, 125VAC

1595, 2095, 1595-S, 2095-S, 1595-NTL, 2095-NTL, 1595-TR, 2095-TR, 1595-L, 2095-L

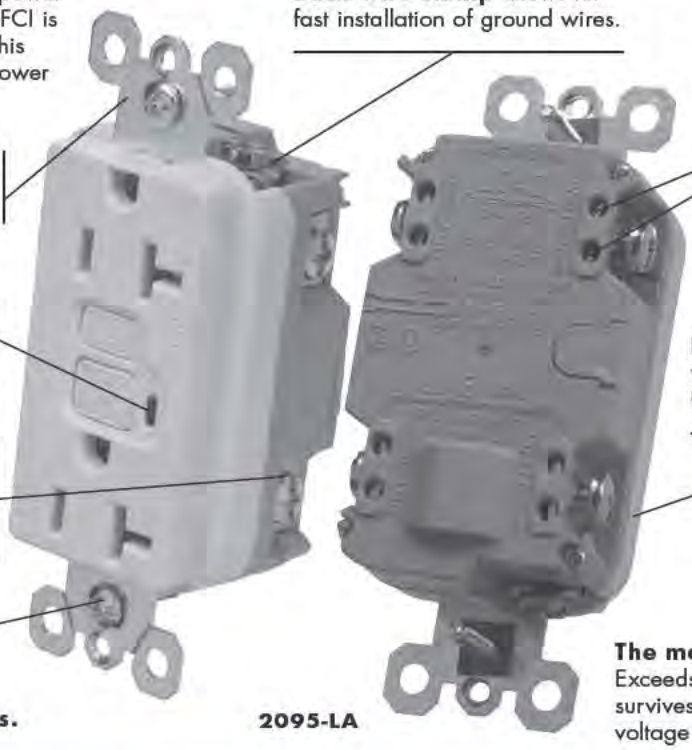
Durability and protection that exceeds the 2006 UL standard.

Patented SafeLock™ protection denies power if the GFCI is miswired or if the GFCI is damaged and protection is lost. This prevents the unsafe condition of power without protection. P&S has the broadest range of ground-fault protection, with the first LED Nightlight/GFCI Combination, and the first Tamper-Resistant GFCI, in addition to Auto-Ground and Illuminated versions.

For Hospital Grade GFCIs, refer to SF1102R4.

Features & Benefits

SafeLock™ Protection denies power if the GFCI is miswired or if the GFCI is damaged and protection is lost. This prevents the unsafe condition of power without protection.



Nickel post-plated mounting strap for superior corrosion resistance.

Trip indicator light (red lamp) makes it easy to identify tripped condition.

Side or internal screw-pressure-plate back wire termination with #14 – #10 AWG stranded or solid, copper or copper-clad conductors.

Captive screws make for easier installation.

Meets 2006 UL requirements.

2095-LA

Back wire clamp allows for fast installation of ground wires.

Two back wire holes per termination add wiring flexibility, eliminate pigtailing and save box space.

Prevents line-load reversal miswire: No power to the face or downstream receptacles if wired incorrectly.

High-impact-resistant, thermoplastic construction for superior strength and durability.

1/4" thinner than competitors' GFCIs; leaves more room for wires in the box.

The most durable GFCI available. Exceeds UL943 voltage surge requirements; survives 100x the required UL 3kA/6kV voltage surge test cycles.

Precast Well Vaults

Fab-Con, L.L.C.
Manufacturing Concrete Products
14670 Highway 82 West
Post Office Box 26
Coker, Alabama 35452
Phone: 205.333.0736 Fax: 205.333.8492

SPECIFICATIONS FOR FAB-CON, L.L.C. CONCRETE PRODUCTS

A. **Scope**

This specification covers the material and applicable design criteria used in the manufacturing of Pre-Cast reinforced concrete units produced in accordance with the plans and specifications.

B. **Reference Documents (Standards)**

Reference is made throughout this specification with various standards used in the underground utility structures industry. These standards are:

American Society for testing materials standards specifications (ASTM)

C858	Underground pre-cast concrete utility structures
C890	"Practice for Minimum Structural Design Loading for Monolithic or Sectional Pre-Cast Concrete Water and Wastewater Structures"
C913	"Pre-Cast Concrete Water and Wastewater Structures"
C478	"Pre-Cast Reinforced Concrete Manholes Section"
C15	Deformed and Plain Fillet-Steel Cards for Concrete Reinforcement
C31	Making and Curing Concrete Test Specimens in the Field
C33	Concrete Aggregates
C39	Compressive Strength of Cylindrical Specimens
C150	Portland Cement
C260	Air-Entraining Admixture for Concrete
C494	Chemical Admixtures for Concrete

American Concrete Institute (ACI)

ACI318	"Building Code Requirements for Reinforced Concrete"

American Association of State Highway and Transportation Officials (AASHTO)

C. **Design Loads**

Design loads shall consist of dead load, live load, and impact load, water table hydrostatic load, and any other special loads that may be imposed upon structure. Live loads are designed for pedestrian loads (350 psf), H-10 traffic loads (8,000 lb wheel load), H-20 and/or H-20-44 traffic loads (16,000 lb wheel load) the governing live load that produces the maximum shears and bending moment in given structure. The dead load is considered to be the worse condition with the water table located at 3' -0" below the grade.

D. **Forms**

Forms shall be accurately constructed and strong enough to maintain the structures dimensions within required tolerances.

E. **Concrete**

E.1: Cement – Portland cement shall conform to ASTM C150

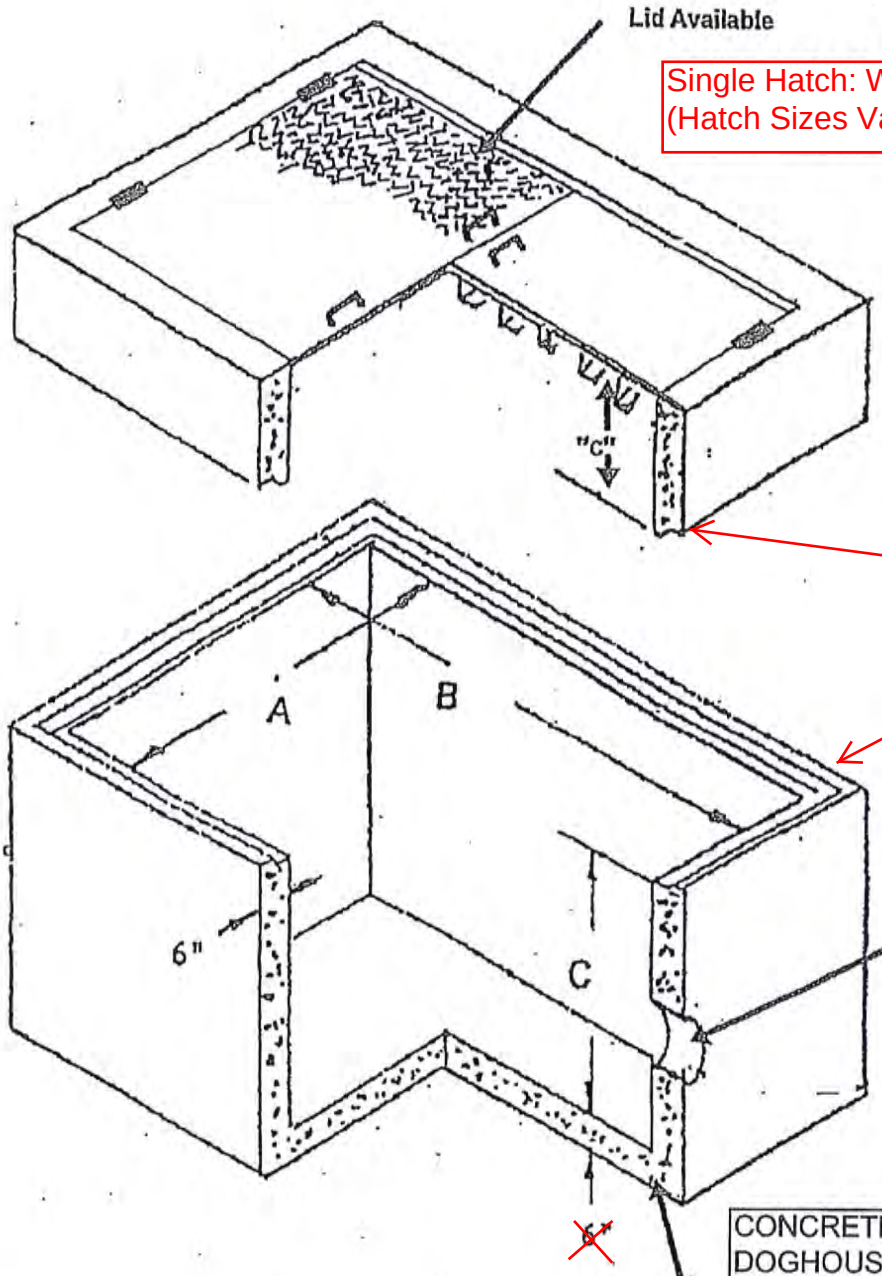
E.2: Aggregate – Fine and coarse aggregate conforming to ASTM C33 and lightweight aggregate conforming to ASTM C330.

E.3: Admixtures – May be used provided such admixtures are not injurious to other products used in the cement.

- A: Chemical admixtures shall conform to specification C494.
- B: Fly Ash Admixtures shall conform to specification C618.
- C: Air Entraining Admixtures shall conform to specification C260.

E.4: Water – Potable

E.5: Steel Reinforcement – Shall be of the size and located per plans and tied to withstand displacement during pouring operation.



- A: Bar Reinforcement – Conforming to specifications A184 / A184M / A615 / A615M / A616 / A617 or A706 / A706M.

E.6: Inserts and Embedded Metal – Shall be of the type required for the intended task and meet the following standards:

- A. Structural steel plates, angles, etc. ASTM A36
- B. Welded studs AWS D1.1

F. **Concrete Mixes**

F.1: Mix Preparations – Concrete shall be of uniform mix of quality materials listed in Section "E – Concrete". Mix proportions shall be determined by following the standards in ACI319 Chapter 5.

Single Hatch: W-AHS
(Hatch Sizes Vary)

Monolithic Casting with Lid Section

FAB-CON, L.L.C.

FLOOD-RESISTANT

W-AHS Access Hatches Flush installation, designed for 25 ft (7.6 M) head of water and reinforced for pedestrian or H-20 wheel loading

U.S.F. Fabrication's flood-resistant access hatches are engineered for installation in areas subject to temporary flooding conditions.

W-APS and W-AHS covers are gasketed and reinforced to withstand floodwater pressure

Manufacturing a complete line of engineered metal products for the construction industry, we set the standard for quality, service and innovation. For product specifications and details, visit:

FLOOD-RESISTANT HATCHES

Model W-AHS Flush installation, designed for 25 ft (7.6 M) head of water and reinforced for pedestrian or H-20 wheel loading

SPECIFICATIONS: W-AHS

The floodtight access hatch shall be *W-AHS*)as manufactured by U.S.F. Fabrication, Inc., Hialeah, Florida with the size being specified on the plans.

Cover: Cover shall be 1/4" aluminum diamond plate with continuous 9/16" diameter EPDM gasket around the perimeter and reinforced for *AASHTO H-20** live load, and capable of holding up to 25 ft. head of water. Cover shall be equipped with a flush lifting handle and 316 stainless steel hold-open arm with red vinyl grip that automatically locks the cover in the 90 degree open position.

Frame: Frame shall be 3/8" aluminum angle with 3/16" x 1- 1/2" strap anchors welded at 18" [457mm] on center around the perimeter.

Hinges: Hinges shall be 316 stainless steel.

Latches: Latches shall be 316 stainless steel cam locks.

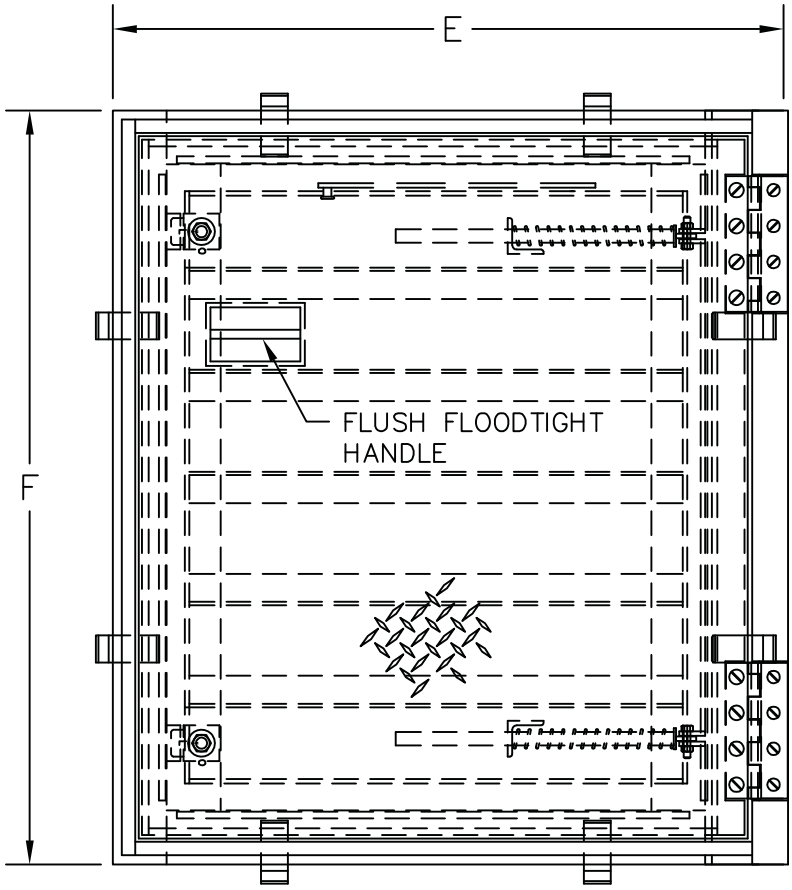
Finish: Cover and frame shall be mill finish aluminum. Hardware shall be 316 stainless steel.

Installation: Installation shall be in accordance with the manufacturer's instructions.

Warranty: The hatch shall be manufactured in the United States. Manufacturer shall guarantee against defects in materials and workmanship for a period of ten [10] years.

** Model W-AHS is ntended for off-street locations that may occasionally receive AASHTO H-20 wheel loads (not for direct traffic applications). Upon request, the manufacturer shall provide structural calculations stamped by a registered professional engineer, which certify the design meets the requirements of AASHTO H-20.*

STANDARD SIZES (custom sizes are available)



FRAME OPENING In (mm) Width x Hinge Side	
24 x 24 [610 x 610]	30 x 36 [762 x 914]

Product No.: 96160130
3" multi-stage, submersible pump designed for domestic water supply, liquid transfer in tanks, irrigation and environmental applications. The pump has "floating" impellers, each with its own tungsten carbide/ceramic bearing.

The pump features soft starting and protection against dry-running, upthrust, overvoltage, undervoltage, overload and overtemperature.

The motor is a one-phase motor of the permanent magnet rotor type ensuring optimum efficiency within a wide load range.
The motor is fitted with a replaceable cable plug.

Liquid:

Pumped liquid:	Water
Maximum liquid temperature:	95 °F
Max liquid temperature at 0.15 m/sec:	95 °F
Liquid temp:	68 °F

c UL US LISTED

LIMITED WARRANTY

Products manufactured by GRUNDFOS PUMPS CORPORATION (Grundfos) are warranted to the original user only to be free of defects in material and workmanship for a period of 24 months from date of installation, but not more than 30 months from date of manufacture. Grundfos' liability under this warranty shall be limited to repairing or replacing at Grundfos' option, without charge, F.O.B. Grundfos' factory or authorized service station, any product of Grundfos' manufacture. Grundfos will not be liable for any costs of removal, installation, transportation, or any other charges which may arise in connection with a warranty claim. Products which are sold but not manufactured by Grundfos are subject to the warranty provided by the manufacturer of said products and not by Grundfos' warranty. Grundfos will not be liable for damage or wear to products caused by abnormal operating conditions, accident, abuse, misuse, unauthorized alteration or repair, or if the product was not installed in accordance with Grundfos' printed installation and operating instructions.

To obtain service under this warranty, the defective product must be returned to the distributor or dealer of Grundfos' products from which it was purchased together with proof of purchase and installation date, failure date, and supporting installation data. Unless otherwise provided, the distributor or dealer will contact Grundfos or an authorized service station for instructions. Any defective product to be returned to Grundfos or a service station must be sent freight prepaid; documentation supporting the warranty claim and/or a Return Material Authorization must be included if so instructed.

GRUNDFOS WILL NOT BE LIABLE FOR ANY INCIDENTAL OR CONSEQUENTIAL DAMAGES, LOSSES, OR EXPENSES ARISING FROM INSTALLATION, USE, OR ANY OTHER CAUSES. THERE ARE NO EXPRESS OR IMPLIED WARRANTIES, INCLUDING MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, WHICH EXTEND BEYOND THOSE WARRANTIES DESCRIBED OR REFERRED TO ABOVE.

Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages and some jurisdictions do not allow limit actions on how long implied warranties may last. Therefore, the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from jurisdiction to jurisdiction.

Before beginning installation procedures, these installation and operating instructions should be studied carefully. The installation and operation should also be in accordance with local regulations and accepted codes of good practice.

1. General description

The SQ/SQE is a 3 inch diameter submersible pump mainly designed for the pumping of raw water in domestic water supply. This manual is designed to assist in the proper set-up, installation and operation of these pumps.

1.1 Applications

Typical applications are:

- residential housing
- small waterworks
- pressure boosting
- irrigation systems
- liquid transfer in tanks.

2. Preinstallation

2.1 Well preparation

If the pump is to be installed in a new well, the well should be fully developed and bailed or blown free of cuttings and sand.

The construction of the Grundfos SQ/SQE submersibles makes them resistant to abrasion; however, no pump made of any material can forever withstand the destructive wear that occurs when constantly pumping sandy water.

If this pump is used to replace an oil-filled submersible or oil-lubricated line-shaft turbine in an existing well, the well must be blown or bailed clear of oil.

2.2 Make sure you have the right pump

Determine the maximum depth of the well and the drawdown level at the maximum pump capacity. Pump selection and setting depth should be made based on this data.

2.3 Pumped liquid requirements

Submersible well pumps are designed for pumping clear, cold water; free of air or gases. Decreased pump performance and life expectancy can occur if the water is not clear, cold or contains air or gases.

The water temperature should not exceed 104°F.

A check should be made to ensure that the installation depth of the pump will always be at least three feet below the maximum drawdown level of the well. The bottom of the motor should never be installed lower than the top of the well screen or within five feet of the well bottom.

2.4 Motor cooling requirements

To ensure proper motor cooling, refer to the table below for minimum flow requirements:

Flow velocity past the motor	Maximum liquid temperature
0.0 f/s (free convection)	86°F (30°C)
Min. 0.5 f/s	104°F (40°C)

If the pump is to be installed horizontally, e.g. in a tank, and there is a risk that the pump might be covered by mud, it must be installed in a flow sleeve.

2.5 Liquid temperatures/cooling

Figure 1 shows an SQ/SQE pump installed in a well.

With the pump operating, figure 1 illustrates the following:

- Well diameter
- Pump diameter
- Temperature of pumped liquid
- Flow past the motor to the pump suction strainer.

Note: The well diameter must be at least 3 inches. If there is a risk that the motor will be covered with sediment, it is recommended the pump be placed in a flow sleeve. The motor should always be installed above the well screen.

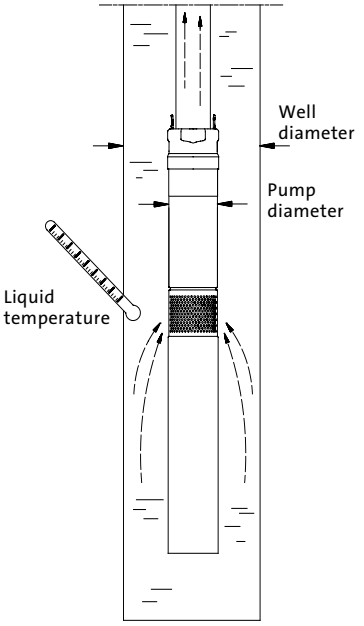

Fig. 1 Pump installed in well

2.6 Motor preparation

Grundfos MS 3 and MSE 3 submersible motors have water-lubricated slide bearings. No additional lubrication is required.

The submersible motors are factory-filled with a special Grundfos motor liquid, type SML 2, which will protect the motor liquid down to 4°F (–20°C) and prevent the growth of bacteria. The level of motor liquid is important for the operating life of the bearings and consequently the life of the motor.

2.7 Refilling of motor liquid

If for any reason the motor liquid has been drained or lost, the motor must be refilled with Grundfos motor liquid SML 2.

To refill the motor, proceed as follows:

1. Remove the cable guard and separate the pump end from the motor.
2. Place the motor in vertical position with an inclination of approximately 10°.
3. Remove the filling plug using a screwdriver or a similar tool.
4. Inject motor liquid into the motor with a filling syringe or similar tool, see fig. 2.
5. To allow possible air to escape, move the motor from side to side and turn the shaft.
6. Replace the filling plug and make sure it is tight.
7. Assemble pump end and motor.
8. Fit the cable guard.

The pump is now ready for installation.

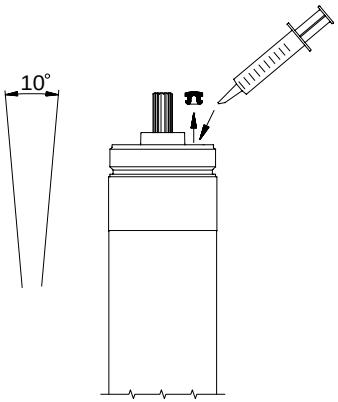

Fig. 2 Injecting motor liquid

US

3. Installation positions

3.1 Positional requirements

The pump is suitable for vertical as well as horizontal installation, however, the pump shaft must never fall below the horizontal plane, see fig. 3.

If the pump is to be installed horizontally, e.g. in a tank, and there is a risk that the pump might be covered by mud, it must be installed in a flow sleeve.

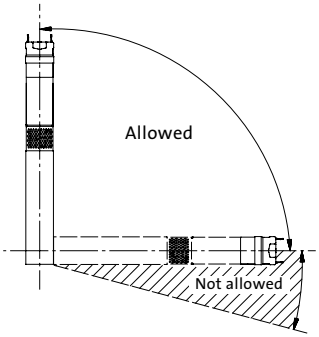

Fig. 3 Pump position

4. Electrical connection

4.1 General

The electrical connection should be carried out by an authorized electrician in accordance with local regulations.

Before starting work on the pump, make sure that the electricity supply has been switched off and that it cannot be accidentally switched on.

The pump must be grounded.

The pump must be connected to an external mains switch.

The supply voltage, rated maximum current and power factor (PF) appear on the motor nameplate.

The required voltage for Grundfos submersible MS 3/MSE 3 motors, measured at the motor terminals, is –10%/+6% of the nominal voltage during continuous operation (including variation in the supply voltage and losses in cables).

If the pump is connected to an installation where a Ground Fault circuit breaker (GFI) is used as additional protection, this circuit breaker must trip out when ground fault currents with DC content (pulsating DC) occur.

Note: The pump must never be connected to a capacitor or to another type of control box than CU 300 or CU 301.

Note: The pump must never be connected to an external frequency converter.

Supply voltage:

1 x 90-120 V or 1 x 200-240 V –10%/+6%, 50/60 Hz.

The current consumption can only be measured accurately by means of a true RMS instrument. If other instruments are used, the value measured will differ from the actual value.

The SQE pumps can be connected to a CU 300 or CU 301 control box.

4.2 Motor protection

The motor has built-in automatic thermal overload protection and requires no additional motor protection.

4.3 Connection of motor

The motor can be connected directly to the main circuit breaker.

Start/stop of the pump will typically be done via a pressure switch, see fig. 4.

Note: The pressure switch must be rated for the maximum amps of the specific pump.

Reduced risk of electric shock during operation of this pump requires the provision of acceptable grounding. If the means of connection to the supply connected box is other than grounded metal conduit, ground the pump back to the service by connecting a copper conductor, at least the size of the circuit supplying the pump.

Single-phase 2-wire wiring diagram for Grundfos motors

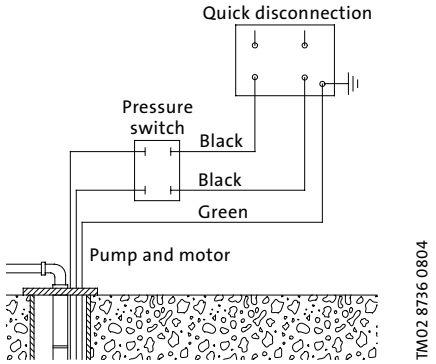

Fig. 4 Wiring diagram

Note: The pump must never be connected to a capacitor or to another type of control box than CU 300 or CU 301.

US

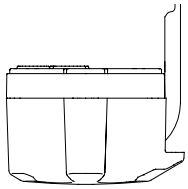
5. Cable sizing

Single-phase 60 Hz maximum cable length motor service to entrance:

Motor rating		Copper wire size								
Volts	**hp**	**14**	**12**	**10**	**8**	**6**	**4**	**2**	**0**	**00**
115	0.5	65	100	160	260	410	660	1050	1680	
230	0.5	300	480	760	1210	1930	3060	4870		
230	0.75	190	300	470	750	1190	1890	3010	4800	
230	1.0	140	220	350	560	890	1420	2260	3600	4540
230	1.5	130	210	330	520	830	1320	2110	3360	4230

6. Splicing the cable

Splice the drop cable with the motor cable. If the splice is carefully made, it will be as efficient as any other portion of the cable and will be completely watertight.



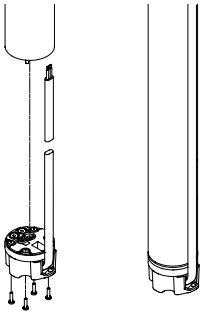
There are a number of cable splicing kits available today - epoxy-filled, rubber-sealed, etc. Many perform well if the manufacturer's directions are followed carefully. If one of these kits is not used, we recommend the following method for splicing the motor cable to the drop cable:

1. Examine the motor cable and the drop cable carefully for damage.
2. Cut the motor leads off in a staggered manner.
3. Cut the ends of the drop cable so that the ends match up with the motor leads.
   Be sure to match the colors.
4. Strip back and strip off one inch of insulation from each lead, making sure to scrape the wire bare to obtain a good connection.
   Be careful not to damage the copper conductor when stripping off the insulation.
5. Insert a properly sized Sta-Kon™-type connector on each pair of leads, again making sure that colors are matched.
   Using Sta-Kon™ crimping pliers, indent the lugs. Be sure to squeeze down hard on the pliers, particularly when using large cable.
6. Form a piece of electrical putty tightly around each Sta-Kon™. The putty should overlap on the insulation of the wire.
7. Use a good quality tape such as #33 Scotch Waterproof or Plymouth Rubber Company Slipknot Grey. **Wrap each wire and joint tightly for a distance of about 2½ inches on each side of the joint. Make a minimum of four passes over each joint and overlap each pass approximately one inch to ensure a completely watertight seal.**

Note: Do not lower or lift the pump using the motor cable.

7. Fitting the cable plug to the motor

The cable plug supplied with the motor is factory-greased. Check that the plug is greased correctly, see fig. 5.



TM02 9604 3504

Fig. 5 Greasing of plug

To fit the cable plug, proceed as follows:

1. Check that the cable is of the correct type, cross-section and length.
2. Check that the mains on the location has correct connection to ground.
3. Check that the motor socket is clean and dry.
4. Press the cable plug onto the motor socket.
   The plug will only fit one way, see fig. 6.
5. Fit and tighten the four screws, see fig. 6.
   When the plug has been fitted, there must not be a clearance between the motor and the cable plug.

TM02 9605 3504

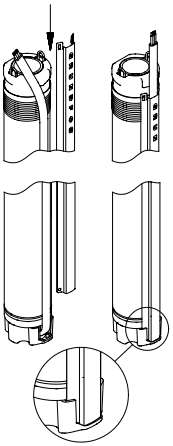


Fig. 6 Fitting the cable plug

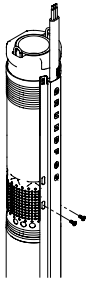
US

8. Fitting the cable guard

To fit the cable guard, proceed as follows:

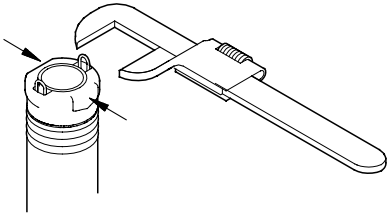


1. Make sure that the motor lead lies flat in the cable guard.
2. Place the cable guard in the groove in the cable plug. The two flaps must engage with the upper edge of the pump sleeve, see fig. 7.

TM02 9613 3504

Fig. 7 Placing the cable guard

3. Fasten the cable guard to the pump suction strainer with the two self-tapping screws supplied, see fig. 8.



TM01 4427 0299

Fig. 8 Fitting the cable guard to the pump suction strainer

9. Piping

- The pump should only be gripped by the two flats at the top of the pump, see fig. 9.
- The pump can be installed vertically or horizontally. During operation, the pump must always be completely submerged in water.
- When plastic pipe is used, a stainless steel safety wire is recommended for lowering and lifting the pump. Fasten the wire to the eyelet on the pump, see fig. 10.
- The threaded joints must be well cut and fit together tightly to ensure that they do not work loose.

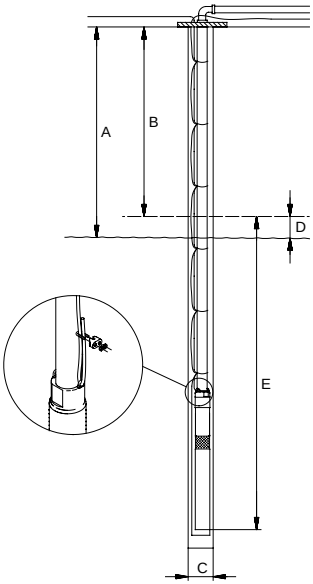
TM02 8739 0804

Fig. 9 Gripping the pump

10. Installing the pump

10.1 Installation depth

The dynamic water level should always be above the pump, see fig. 10.



A = Dynamic water level

B = Static water level

C = Minimum 3 inch well diameter

D = Drawdown

E = Installation depth below static water level. Maximum 500 feet.

TM02 8740 0804

Fig. 10 Installation depth

Procedure:

To install the pump, proceed as follows:

1. Attach the enclosed data plate sticker at the well head.
2. Check the well for proper clearance. The well must be at least 3 inches in diameter. It is a good idea to check the well for clearance using a plumb ring (2.95 ø x 10 in.).
3. Attach the first section of riser pipe to the pump.
4. Lower the pump into the well. Make sure the motor cable is not damaged when the pump is lifted or lowered into the well, especially in 3 inch wells. **Note:** Do not lower or lift the pump using the motor cable.
5. When the pump has been installed to the required depth, the installation should be finished by means of a well seal.
   Note that the dynamic water level should always be above the pump.
6. Loosen the safety wire so that it becomes unloaded and lock it to the well seal using a cable clamp.
7. Complete the electrical connections.

Note: The pump must never be connected to a capacitor or to another type of control box than CU 300 or CU 301.

Installation depths:

Maximum installation depth:
500 feet below the static water level.

Minimum installation depth:
1.75 feet below the dynamic water level.

Vertical installation:

During start-up and operation, the pump must always be completely submerged in water.

Horizontal installation:

The pump must be installed at least 1.75 feet below the dynamic water level.

If there is a risk that the pump might be covered by mud, the pump must always be placed in a flow sleeve.

Note: Do not lower or lift the pump using the motor cable.

11. Generator operation

It is safe to operate the SQ/SQE with a generator.

The generator must be sized 50% above the P1 (input power) values of the pump. See the following table.

Motor [hp]	Min. generator size [W]	Recommended generator output [W]
0.5	1200	1500
0.75	1900	2500
1.0	2600	3200
1.5	2800	3500

US

12. Starting the pump for the first time

When the pump has been connected correctly, the pump should be started with the discharge valve closed approximately one third.

Due to the soft start feature, the pump takes approximately 2 seconds to develop full pressure.

12.1 Motor cooling and other considerations

- Make sure the well is capable of yielding a minimum quantity of water corresponding to the pump capacity.
- Do not start the pump until it is completely submerged in the liquid.
- As the valve is being opened, the drawdown should be checked to ensure that the pump always remains submerged.
- To ensure the necessary cooling of the motor, the pump should never be set so low that it gives no water.
  If the flow rate suddenly falls, the reason might be that the pump is pumping more water than the well can yield. The pump must immediately be stopped and the fault corrected.

12.2 Impurities in the water

If there are impurities in the water, the valve should be opened gradually as the water becomes clearer. The pump should not be stopped until the water is clean, otherwise the pump parts and the check valve may become clogged.

When the water is clean, the valve should be fully opened.

12.3 Minimum flow rate

To ensure the necessary cooling of the motor, the pump flow rate should never be set to a value lower than 0.2 gpm.
If the flow rate suddenly falls, the reason might be that the pump is pumping more water than the well can yield. The pump must immediately be stopped and the fault corrected.

Note: The pump's dry-running protection is effective only within the recommended duty range of the pump.

Note: Do not let the pump run against a closed discharge valve for more than 5 minutes. When the discharge valve is closed, there is no cooling flow and there is a risk of overheating in motor and pump.

12.4 Built-in protection

The motor incorporates an electronic unit which protects the motor in various situations.

- In case of overload, the built-in overload protection will stop the pump for 5 minutes. After that period, the pump will attempt to restart.
- If the pump has been stopped as a result of dry running, it will start automatically after 5 minutes.
- If the pump is restarted and the well has not recovered, the pump will stop after 30 seconds.

12.5 Resetting the pump

Switch off the electricity supply for 1 minute.

The motor is protected against the following conditions:

- dry running
- voltage surges (up to 6000 V)
  In areas with high lightning intensity, external lightning protection is required.
- overvoltage
- undervoltage
- overload
- overtemperature.

12.6 MS 3 motors

Note: All MS 3 motors are factory-set to detect dry-running conditions.

Check that the combination of pump and motor corresponds to the data on page 39.

12.7 MSE 3 motors

Note: All MSE 3 motors are factory-set to detect dry-running conditions. However, if the maximum pump speed setting is changed, the dry running stop value must also be changed. Please refer to either the CU 301 or CU 300 I&O for instructions on this procedure.

12.8 Maintenance and service

The pumps are normally maintenance-free.

Deposits and wear may occur. For that purpose, service kits and service tools are available from Grundfos.
The Grundfos Service Manual is available on request.

The pumps can be serviced at a Grundfos service center.

13. Assembly of pump and motor

To assemble pump end and motor, proceed as follows:

1. Place the motor horizontally in a vice and tighten it, see fig. 12.
2. Pull the pump shaft out to the position shown in fig. 11.

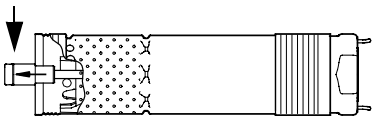


Fig. 11 Pump shaft position

3. Grease the motor shaft end with the grease supplied with the motor.
4. Screw the pump end on the motor (55 Nm).
   Note: The pump shaft must engage with the motor shaft.
   A spanner may be used on the clamping faces of the pump end, see fig. 12.
5. Fit the cable guard as described in section *8*.

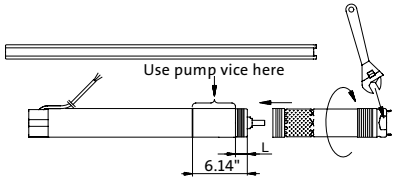

Fig. 12 Pump in vice

0.5 hp: L = 4.7".
0.75 hp: L = 4.0".
1.0 hp: L = 2.6".
1.5 hp: L = 2.6".

When pump end and motor have been assembled correctly, there must be no clearance between pump end and motor.

To disassemble, reverse procedure.

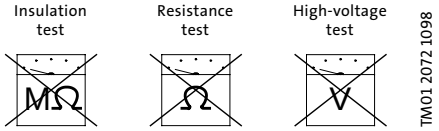
US

14. Troubleshooting

Fault	Cause	Remedy
1. The pump does not run.	a) The fuses are blown.	Replace the blown fuses. If the new fuses blow too, check the electrical installation and the drop cable.
	b) The GFI circuit breaker has tripped.	Reset the circuit breaker.
	c) No electricity supply.	Contact the electricity provider.
	d) The motor protection has cut off the electricity supply due to overload.	Check for motor/pump blockage.
	e) The drop cable is defective.	Repair or replace the pump/cable.
	f) Overvoltage has occurred.	Check the electricity supply.
2. The pump runs but gives no water.	a) The discharge valve is closed.	Open the valve.
	b) No water or too low water level in well.	Increase the installation depth of the pump, throttle the pump or replace it with a smaller capacity model.
	c) The check valve is stuck in its closed position.	Pull the pump and clean or replace the valve.
	d) The suction strainer is closed.	Pull the pump and clean the strainer.
	e) The pump is defective.	Repair or replace the pump.
3. The pump runs at reduced capacity.	a) The drawdown is larger than anticipated.	Increase the installation depth of the pump, throttle the pump or replace it with a smaller capacity model.
	b) The valves in the discharge pipe are partly closed/blocked.	Check and clean or replace the valves as necessary.
	c) The discharge pipe is partly choked by impurities (iron bacteria).	Clean or replace the discharge pipe.
	d) The check valve of the pump is blocked.	Pull the pump and clean or replace the valve.
	e) The pump and the riser pipe are partly choked by impurities (iron bacteria).	Pull the pump. Check and clean or replace the pump, if necessary. Clean the pipes.
	f) The pump is defective.	Repair or replace the pump.
	g) Hole in discharge pipe.	Check and repair the piping.
	h) The riser pipe is defective.	Replace the riser pipe.
	i) Undervoltage has occurred.	Check the electricity supply.
4. Frequent starts and stops.	a) The differential of the pressure switch between the start and stop pressures is too small.	Increase the differential. However, the stop pressure must not exceed the operating pressure of the pressure tank and the start pressure should be high enough to ensure sufficient water supply.
	b) The water level electrodes or level switches in the reservoir have not been installed correctly.	Adjust the intervals of the electrodes/level switches to ensure suitable time between the cutting-in and cutting-out of the pump. See installation and operating instructions for the automatic devices used. If the intervals between start/stop cannot be changed via the automatics, the pump capacity may be reduced by throttling the discharge valve.
	c) The check valve is leaking or stuck half-open.	Pull the pump and clean or replace the check valve.
	d) The supply voltage is unstable.	Check the electricity supply.
	e) The motor temperature is too high.	Check the water temperature.

14.1 Instruments not allowed

Note: The use of the following instruments is not allowed during troubleshooting.



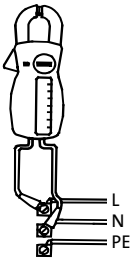


Fig. 13 Instruments not allowed

Note: When measuring, use RMS instruments.

15. Checking of motor and cable

1. Supply voltage  	Measure the voltage L1 (RMS) between phase and L2. Connect the voltmeter to the terminals at the connections.	The voltage should, when the motor is loaded, be within the range specified in section *4. Electrical connection*. Large variations in supply voltage indicate poor electricity supply, and the pump should be stopped until the problem has been corrected.
2. Current consumption  	Measure the current (RMS) while the pump is operating at a constant discharge head (if possible, at the capacity where the motor is most heavily loaded). For maximum current, see motor nameplate.	If the current exceeds the full-load current, there are the following possible faults: • Poor connection in the leads, possibly in the cable joint. • Too low supply voltage, see item 1.

16. Environment

During handling, operation, storage and transport, all environment regulations dealing with the handling of hazardous materials must be observed.

When the pump is taken out of operation, it must be ensured that no hazardous material is left in the pump and in the riser pipe, which can be injurious to persons and the environment.

17. Disposal

Disposal of this product or parts of it must be carried out according to the following guidelines:

1. Use the local public or private waste collection service.
2. If such waste collection service does not exist or cannot handle the materials used in the product, please deliver the product or any hazardous materials from it to your nearest Grundfos company or service center.

US

18. Technical data

Supply voltage

1 x 90-120 V –10%/+6%, 50/60 Hz, PE.

1 x 200-240 V –10%/+6%, 50/60 Hz, PE.

Operation via generator

Recommended generator output must be equal to P1 [kW] + 50% and minimum P1 + 10%.

Starting current

The motor starting current is equal to the highest value stated on the motor nameplate.

Starting

Soft starting.

Run-up time

Maximum 2 seconds.

Motor protection

The motor is protected against dry running, overvoltage, undervoltage, overload and overtemperature.

Power factor

PF = 1.

Service factor

0.5 hp: 1.85 at 115 V/230 V.
0.75 hp: 2.05 at 230 V.
1.0 hp: 2.25 at 230 V.
1.5 hp: 1.65 at 230 V.

Motor cable

3 Wire, 14 AWG XLPE.
Length: 5 feet.

Motor liquid

Type SML 2.

pH values

5 to 9.

Liquid temperature

The temperature of the pumped liquid must not exceed 104°F.

Note: If liquids with a viscosity higher than that of water are to be pumped, please contact Grundfos.

Discharge port

5 SQ/SQE: 1" NPT.

10-15 SQ/SQE: 1¼" NPT.

22-30 SQ/SQE: 1½" NPT.

Storage conditions

Minimum ambient temperature: 4°F.
Maximum ambient temperature: 140°F.

Freeze protection

Note: The motor must not be stored without being filled with motor liquid.

If the pump has to be stored after use, it must be stored on a frost-free location or it must be ensured that the motor liquid is frost-proof.

Operating conditions

Minimum ambient liquid temperature: 32°F.
Maximum ambient liquid temperature: 104°F.

Motor dimensions (MS 3 and MSE 3)

0.5 hp: 20.9" length x 2.68" diameter.
0.75 hp: 20.9" length x 2.68" diameter.
1.0 hp: 22.3" length x 2.68" diameter.
1.5 hp: 22.3" length x 2.68" diameter.

Motor weights (MS 3 and MSE 3)

0.5 hp: 6.0 lbs.
0.75 hp: 7.1 lbs.
1.0 hp: 8.2 lbs.
1.5 hp: 8.2 lbs.

Pump end dimensions

Pump diameter: 2.68".
Pump diameter, incl. cable guard: 2.91".

Pump end dimensions (min. and max.)

5 SQ/SQE: 10.6" to 18.0".
10 SQ/SQE: 10.6" to 14.8".
15 SQ/SQE: 10.6" to 16.9".
22 SQ/SQE: 10.6" to 16.9".
30 SQ/SQE: 10.6" to 13.7".

Pump end weights (min. and max.)

All SQ/SQE models: 2.2 lbs to 3.5 lbs.

Well diameter

Minimum 3".

Installation depth

Maximum 500 feet below static water level.

Subject to alterations.

Series DF

Series DF Dual Function Control

Part No.	DFC1A0
Unit Price	$166.00
Lead Time (Days)	10 Days

Image is of actual product

Model	DF
Mode of Operation	Direct
Sensitivity	26 K
Control Style	Open Board
Socket Style	N/A
Standoff Style	1/16" Panel
Enclosure	None
Contact Design	1 Normally Open & 1 Normally Closed (non-powered)
Contact Rating	10 Amp Resistive 1/3 horse power
Secondary Voltage	12 VAC
Terminal Style	Spade Connection
Number of Channels	1
Minimum Temperature (°F)	-40
Maximum Temperature (°F)	150
Protection	Non-Intrinsically Safe
Approvals	UL 508 General Pupose UL 353 for use in Boilers
Minimum Qty (per Release)	1
Weight (Lbs)	0.7

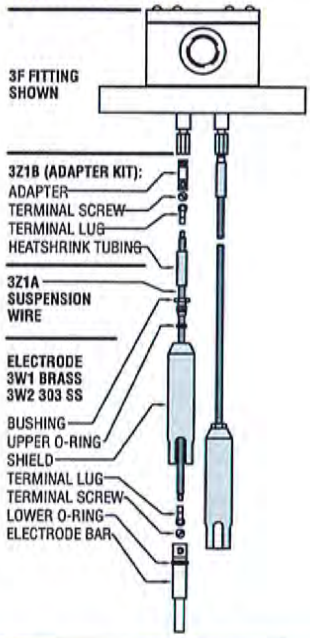
Options

Level Sensor (multiple sensors per well)

Series 3W – Wire Suspended Probes

- Metallic Bars
- Plastic Shield Protected
- Adaptable to Many Fittings
- Field Assembled

Series 3W probes, consisting of metallic bars within a protective plastic shield, are designed to be suspended in liquid with PVC-insulated wires. They are ideal for applications where rigid electrode rods are impractical or cumbersome, such as:



- Deep Wells
- Pump Control
- Waste Water
- Deep Tanks

7/8″ (2.22 cm) diameter x 3-3/4″ (9.52 cm) length. 3Z1A wire and 3Z1B adaptor kit required for use with 3E, 3F and 3N fittings.

Series 3W

Components Detail

How to Order

Select a 3W electrode, a 3Z1B adaptor and a length of 3Z1A suspension wire to form a complete suspended probe.

1. 3W Electrodes

Probe Material	Part Number
Brass	3W1
316 Stainless Steel	3W2

2. 3Z1B Adaptor Kit
For use with 3E, 3F and 3N fittings.
Part Number: 3Z1B

3. 3Z1A Suspension Wire
Order in standard or custom length.

Length (Feet)	Part Number
500	100325-500
1000	100325-1000
5000	100325-5000
Custom	3Z1A-XX Specify in one foot increments up to 5000 ft.

Series 3Y – Corrosion Resistant Probes

- Metallic Bars
- Corrosion Resistant
- Available in Many Materials for Various Requirements
- Adaptable for Various Fittings

Series 3Y wire suspended probes consist of metallic bars within a protective plastic shield, designed to be suspended in liquid. Series 3Y suspension wires are PVC or Teflon® insulated for use in corrosive liquid applications. 7/8″ (2.22 cm) diameter x 3-1/2″ (8.90 cm) length.

Series 3Y

Specifications

Style	Wire suspended
Tip Material	Carp. 20, Hastelloy C, 316 stainless steel
Shield Material	PVC 150°F (66°C), Teflon®

How to Order

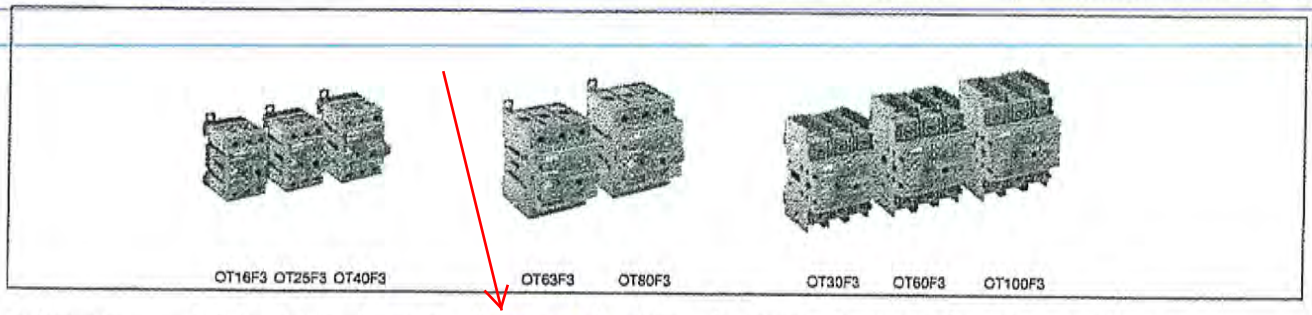
Use the **Bold** characters from the chart below to construct a product code.

3Y X X X

Series
3Y

Shield Material
1 – PVC
3 – Teflon®

Probe Tip Material
C – 316 Stainless Steel
D – Carp. 20
F – Hastelloy C



Length of Wire
1 – 10 feet
2 – 20 feet
3 – 30 feet
etc.

Note: 3Z1B Connector is used to connect suspension wire with 3B, 3E, 3F, 3G or 3N fitting.

Applications

- General Purpose
- Wire Suspended Probes
- Corrosive Liquids, Chemicals

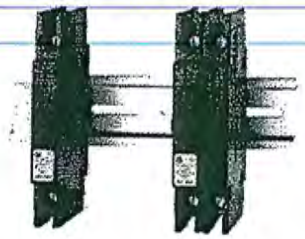
Description

Built and Listed to UL 489

Type QCR and QCF Circuit Breakers are UL listed Circuit Breakers that are suitable for use as branch circuit protectors.

Applications

QCR and QCF Circuit Breakers are only 1/2-inch wide per pole and are excellent for general purpose industrial applications where space savings is required.



Product Features and Ratings

- 1/2-inch wide per pole
- Cable-in/Cable-out
- Black cases with black handles
- Three position handle: ON, Tripped (center), OFF
- Thermal-Magnetic Protection
- UL File E7819
- CSA File LR48907
- One, two and three pole
- 10 kAIC at 120/240 Vac, 10-60 Amperes
- 22 kAIC at 120/240 Vac, 15-20 Amperes
- 10 kAIC at 240 Vac, 10-30 Amperes
- 3 kAIC at 62.5 Vdc (1 Pole)
- 3 kAIC at 130 Vdc (2 Poles in Series)
- Normal Operating Environment: 0-40°C 5-95% Humidity (Non-Condensating)

Additional Ratings

In addition to the ratings shown for the 1/2-inch wide QCR and QCF, the complete QC breaker line includes:

- 1-4 Poles
- 5-100 Amperes
- 10 through 65 kAIC
- 120/240 and 240 Vac
- 1-inch per pole

1-Pole *2-Pole*

QCR (Rear-Mounted Breakers)

1-Pole *2-Pole*

QCF (Front-Mounted Breakers)

3-Pole

QCR (Rear-Mounted Breakers)

Type QCR have as a standard feature provisions for 35mm DIN-Rail rear mounting with a spring-loaded release. Optional clips for individual mounting are available as a separate accessory.

3-Pole

QCF (Front-Mounted Breakers)

Type QCF have two threaded steel inserts to facilitate front mounting with #6-32 steel screws. The clamp type terminals accessible from the rear of the breaker so that cables can be accessed without removal of the breaker from the front cover.

QCR 1-Pole Breaker with QCRMTGFT Clips (Qty. 2) Individually Mounted

QCF Breaker Front Panel Mounted

QUICKLAG Industrial Circuit Breakers Cable-in/Cable-out (1/2 inch per pole)

Available QCR and QCF Breaker Accessories

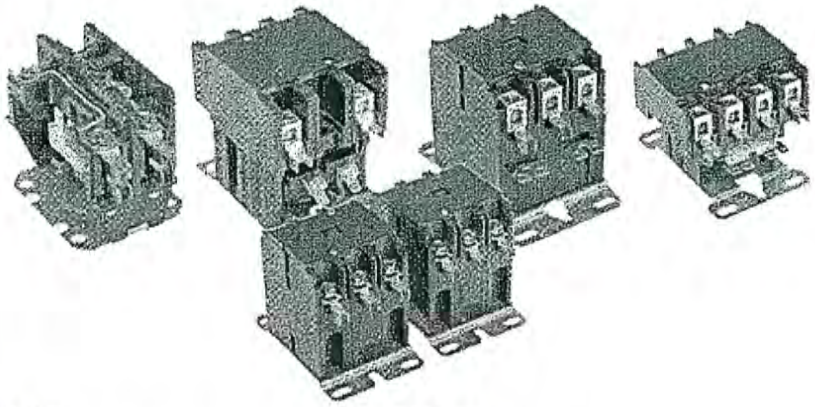
Catalog Number	Description
QCRMTGFT	Steel mounting clip mounts QCR breaker if individual mounting is required. Quantity two required for 1- and 2-pole and four required for 3-pole breakers.
QCRFPL1P	Removable padlock device for single-pole QCR or QCF breaker.
QCRFPLMP	Removable padlock device for multi-pole QCR or QCF breaker.
QCRFLOFF	Padlock bracket assembly for QCR or QCF single or multi-pole breakers (off only).

① Standard breaker terminals are box type lugs.

② Breakers with "T" Catalog Number Suffix are suitable for line and load side ring terminal connection (#10-32 plus/minus terminal screw provided).

③ Breakers with "P" Catalog Number Suffix are suitable for terminating 2 #10 AWG Quick-Connect Type Terminals per phase on breaker load side.

④ Breakers with Shunt Trip Attachment (extra pole required on breaker right-hand side) are available. Contact Cutler-Hammer.



⑤ All ratings 15 to 60 amperes are HACR rated.

⑥ Breakers with "H" Catalog Suffix have 240 Vac construction.

⑦ All 15 and 20 ampere single-pole breakers are SWD (Switching Duty) rated for fluorescent lighting applications.

⑧ 60/75°C Cu/Al wire on all ratings except 60 amperes which requires Cu only conductor.

Definite purpose Contactors

Applications

Type DP contactors provide high performance with flexibility and reliability, designed to match numerous applications including:

- Motors
- Power supplies
- Food service equipment
- Compressors
- Business machines
- Resistive heating
- Air conditioning
- Refrigeration equipment
- Welding

Agency approvals

- UL 508 Guide No. NLDX2, File # E224401
- CE/Semko Certified
- EN60947-4-1:1991
- IEC 947-4-1

Features

- Available as:
  - 30A, 1, 2, 3 or 4 pole
  - 40A, 1, 2, 3 or 4 pole
  - 60A, 3 pole
- Industry standard mounting plate provides easily accessible mounting holes
- Coil terminals are provided with #6-32 screws and (1) .250 quick connect or dual .250 quick connect terminals
- Exclusive hex, slotted, phillips #10-32 terminal screws for main terminals
- Coil is Class B (130° C) Insulation system with wide range of voltages and 50/60 Hz ratings
- Double E Magnet Assembly provides optimal performance with reduced power consumption
- Snap-in auxiliary switch with 1 SPDT or 2 SPDT contacts available as an option
- 1 NO & 1 NC auxiliary contact block with 600 VAC rating available as an option
- Base assembly is made from high arc-resistant plastic

Catalog number explanation

250VDC	.25A

Ordering bulk quantities

To order bulk package quantities add "/B" to the end of the catalog number.

Example: For quantities of 25 of a 30A 3 pole contactor with 24VAC coil, the catalog number would be: DP30C3P-F/B

Mechanical interlock

Frame size		Catalog number	List price
DP30 DP40		VMDP-1	$ 7

① Must be ordered in standard pack quantities as shown. Add suffix "/B" to the catalog number.

Features

- **Solid State ESP100, 958 & 958L Overloads**
  - —Phase Loss Protection—Trips Within 3 Seconds
  - —Ambient Insensitive
  - —Heaterless Design
  - —Self-Powered
  - —±2% Repeat Trip Accuracy
  - —NEMA Class 10, 20 & 30 Trip Curves Available
  - —FLA Adjustment Dial with Wide Adjustment Range (Fig. 1)
  - —Short Circuit Self Protected
  - —Thermal Memory Circuit
  - —Conformally Coated Circuit Board
  - —-22°F to 159°F (-30°C to 70°C)
  - —NC Contact Rated NEMA A600, P600 (10 Amps 600VAC Max., 5 Amps 600VDC Max.)
  - —"Must Hold Amps" Adjustment Dial (958 only)
- **Ambient Compensated Bimetal Overloads**
  - —Automatic or manual reset adjustment.
  - —A manual test button is provided to test the operation of the 3 pole overload relay control contacts.
  - —±15% nominal trip current adjustment.
  - —Accept either standard Class 20 or Quick Trip (NEMA Class 10) heater elements without any other changes or adjustments.
  - —Available with a normally open contact for an alarm circuit (SPDT) up to 60A.
  - —Compensated bimetal overload relays provide a constant trip time in ambient temperatures from -20°F to +170°F for a given heater rating.
- UL Listed File #E22655 or Component Recognized
- CSA Certified File #LR6535
- **3RB10 Solid State Overload Relay**
  - —Marking Strip.
  - —Manual/automatic RESET selector switch.
  - —STOP button.
  - —1 NO and 1 NC contacts.
  - —Trip class 10 or 20.
  - —Test function and switch position indicator.
  - —4:1 current adjustment dial e.g. 200-540A.
  - —Phase loss protection.
  - —Self-powered.

Application

ESP100 Solid State Overloads

ESP100 solid state overload relays are self powered, requiring no separate 120V source to power the circuit board. They provide phase loss protection, fewer connection points and high repeat trip accuracy which results in longer motor life and cost savings. NEMA Class 10, 20 and 30 trip curves are available for a variety of applications.

The ESP100 solid state overload provides phase loss protection for the motor by tripping within three seconds upon complete loss of one phase of a three phase motor branch circuit.

Each overload has at least a 2:1 current adjustment range with the adjustment dial reading out in full load amps. In addition to the markings on the dial there are audible clicks which allow for extremely fine tuning.

The heaterless construction of these overloads minimizes energy costs and the costs of cabinet ventilation or cooling. Solid state overloads can be used at temperatures from -30°C to +70°C and are rated for 50Hz and 60Hz applications.

ESP100 panel mounted overloads can be used to upgrade existing starter applications where panel mounted thermal overloads are used. In addition, ESP100 overloads can be panel mounted when used with other types of controllers, such as DP, IEC contactors, and soft starts.

ESP100 overloads can be used on high voltage applications, making them ideal for use with vacuum contactors and other high voltage control.

ESP100 overloads can be retrofitted on existing contactors using the retrofit plate suffixes or on other brands using the plates listed in the competitive retrofit plates table on page 6/46.

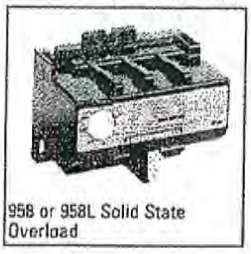
958 ESP100 Special Use Solid State Overloads

958 ESP100 special use solid state overloads provide excellent protection of hermetically sealed compressors and artificially cooled motors which require ambient insensitivity and quick trip response times. Combined with a series lockout relay, they can provide unsurpassed protection for hermetically sealed compressor motors in air conditioning applications. The combination of high trip speed, current adjustment, and ease of installation makes it suitable for these applications. The trip curves have been custom tailored to provide proper overload protection on such loads without causing nuisance tripping.

958 overload dials denote must hold amps. Must trip amps are 112% of the must hold setting.

958L ESP100 Oil Field Solid State Overload Relays

958L ESP100 solid state overloads are designed specifically for the oil market and the cyclical loads experienced with these types of pumping applications. These overloads provide protection on all standard motors, oil well pump motors, multi-torque connections, and ultra-high slip motors.



Rotors can be damaged in 8 to 15 seconds during motor stall conditions if electrical power is not removed. To prevent damage during motor stall, the 958L solid-state overload removes power in 7 seconds at 250% locked rotor current. Therefore, die cast or fabricated rotors will be protected from damage saving the user both time and money.

Ambient Compensated Bimetal Overloads

These thermal type overload relays are used to protect motors from excessive heat resulting from sustained motor overloads, rapid motor cycling and stalled rotor conditions. Although these devices function based on thermal principles they are designed to compensate for the ambient air temperature surrounding the overload. This helps prevent the occurances of nuisance tripping when there are high surrounding ambient temperatures. The percentage of overload determines the length of time required to open the circuit.

SDSA1175 SPDs
Features

Superior Performance
Square D brand Surgelogic SDSA1175 SPDs utilize high-energy suppression circuitry that can be located at any point in the electrical system. As a Type 1 rated device, they have the flexibility to be used with or without an Overcurrent Protection Device (OCPD).

SDSA1175 SPDs provide surge suppression for equipment from severe transient activity. Each MOV is individually fused and the products carry a NEMA Type 4X rating suitable for installing indoors, outdoors, or in other harsh environments.

Easy Installation
Surgelogic SDSA1175 SPDs are some of the most versatile, yet compact devices available on the market today. This compact package can be mounted on an electrical panel, meter socket, or inside electrical control cabinets.

Warranty
The SDSA1175 and SDSA1175T warranty is 2 years.

sky electronics INTERNATIONAL

Product data sheet
Characteristics

ZB5AG1
selector switch head Ø22 3-position spring return Ronis 455

Main

Range of product	Harmony XB5
Product or component type	Head for key selector switch
Device short name	ZB5
Bezel material	Plastic
Mounting diameter	22 mm
Sale per indivisible quantity	1
Shape of signaling unit head	Round
Type of operator	Spring return left to centre
Operator profile	Black key switch
Operator position information	3 positions +/- 45°
Type of keylock	Ronis 455
Key withdrawal position	Right

Complementary

CAD overall width	29 mm
CAD overall height	29 mm
CAD overall depth	72 mm
Product weight	0.057 kg
Mechanical durability	1000000 cycles
Station name	XALK 2...5 cut-outs XALD 1...5 cut-outs
Electrical composition code	SR1 for <= 3 contacts using single blocks in rear mounting SF1 for <= 3 contacts using single blocks in front mounting C3 for <= 6 contacts using single blocks in front mounting C11 for <= 3 contacts using single blocks in front mounting C8 for <= 4 contacts using single and double blocks in front mounting C7 for <= 4 contacts using single blocks in front mounting C6 for <= 5 contacts using single and double blocks in front mounting C5 for <= 5 contacts using single blocks in front mounting C4 for <= 6 contacts using single and double blocks in front mounting

Environment

Protective treatment	TH
Ambient air temperature for storage	-40...70 °C
Ambient air temperature for operation	-25...70 °C
Class of protection against electric shock	Class II conforming to IEC 60536
IP degree of protection	IP69K conforming to IEC 60529
NEMA degree of protection	NEMA 4X NEMA 13
Resistance to high pressure washer	7000000 Pa at 55 °C,distance: 0.1 m
IK degree of protection	IK06 conforming to IEC 50102
Standards	EN/IEC 60947-1 EN/IEC 60947-5-1 EN/IEC 60947-5-4 JIS C 4520 UL 508 CSA C22.2 No 14

Specifications

Revision: 2.06

Medium Loud Continuous Panel Mount Case and Quick Connect Blades Termination

Mounting:	Panel Mount
Operating Mode:	Medium Loud Continuous
Operating Voltage:	30-120 Vac
Operating Frequency:	2900±250 Hz
Typical Operating Current:	7 mA at 30 Vac 40 mA at 120 Vac
Typical Sound Pressure:	80±5 dB(A) at 30 Vac, at 24 inches (61 cm), at 25°C 95±5 dB(A), at 120 Vac, at 24 inches (61 cm), at 25°C
Termination:	Quick Connect Blades
Termination Strength:	Pull test with a maximum of 22 pounds (10 kg) load
Operating Temperature:	-20°C to +65°C
Storage Temperature:	-40°C to +85°C
Surge Voltage:	20% over maximum rated voltage for less than 5 minutes
Reverse Voltage Protection:	To the maximum operating voltage
Construction Materials:	Case- Plastic "NORYL® N-190", Flame Retardant UL 94-VO, Black Internal Circuit- Audio-oscillator and piezoelectric driver Potting- 2 parts epoxy resin or silicone, black Diaphragm- Stainless Steel 304
Gasket:	Gasket (Sold Separately)- 0.062" Thick, 60 Durometer Neoprene
Environmental Durability:	ASTM B117 Certified - Withstands exposure to salt spray for 300 hours IP 68 Certified - Withstands water submergance and dust exposure Humidity- 95% relative humidity at +40°C continuously for 100 hours Vibration- Withstands vibration between 0 and 55 Hz, on all axes
Life Expectancy:	10 years under normal operating conditions
Warranty:	For a period of two years from the date of manufacture under normal operating conditions

CONTINUOUS HINGE WITH CLAMPS, TYPE 4

INDUSTRY STANDARDS

UL 508A Listed; Type 4, 12, 13; File No. E61997
cUL Listed per CSA C22.2 No. 94; Type 4, 12, 13; File No. E61997

NEMA/EEMAC Type 3, 4, 12, and 13
CSA, File No. 42186; Type 4 and 12
IEC 60529, IP66

APPLICATION

These single-door enclosures feature a hinged door with clamps on three sides to create a secure seal in indoor or outdoor environments. The gray polyester powder finish inside and out provides enhanced corrosion protection in outdoor applications.

SPECIFICATIONS

- 16 or 14 gauge steel (see table)
- Seams continuously welded and ground smooth
- External wall-mounting brackets
- Formed external flanges around all sides of enclosure opening
- Stainless steel door clamps on three sides of door
- Removable heavy gauge stainless steel continuous hinge pin
- Hasp and staple provided for padlocking
- Data pocket is high-impact thermoplastic
- Collar studs provided for mounting optional panels
- Bonding provision on door

FINISH

ANSI 61 gray polyester powder paint inside and out

ACCESSORIES

See also Accessories.
Industrial Corrosion Inhibitors
Fast-Operating Clamp Assembly
Incandescent Light Package
Compact Cooling Fans
Steel and Stainless Steel Window Kits

MODIFICATION AND CUSTOMIZATION

Hoffman excels at modifying and customizing products to your specifications. Contact your local Hoffman sales office or distributor for complete information.

Purchase panels separately. Optional stainless steel, conductive, composite and aluminum panels are available for most sizes.

Corrosion Inhibitors

Industrial Corrosion Inhibitors

Hoffman corrosion inhibitors protect

- Interior components of electrical enclosures, boxes, consoles and wireways
- Interior components of electronic enclosures
- Electrical and electronic equipment and controls
- Parts and components that are packaged in crates during shipping and storage
- Switch gear and relay cabinets
- Interiors of pipes, conduits and fuse boxes
- Process control computers, instruments and recording devices
- Tool chest interiors and contents
- Equipment stored at construction sites

Chief Advantages

- Protects against salt and high humidity
- Eliminates the need of oiling, plating or dipping metal
- Puts protected equipment to use immediately without degreasing or coating removal

How They Work

Each inhibitor contains a special chemical combination that vaporizes and condenses on all surfaces in an enclosed area. Vapors will redeposit as needed in the event of condensation of moisture on surfaces. These vapors reach every part of an enclosure, protecting all interior components. Spraying, wiping or greasing are not required. This eliminates precoating, special wraps and drying agents. Protection is effective even in salt-water atmospheres. The AHCI5E and AHCI10E emitters have additional red-metal inhibitors for further protection. Enclosures containing corrosion inhibitors must be reasonably sealed.

Life Expectancy and Usage

The normal useful life-span of Hoffman corrosion inhibitors is in excess of one year. However, inhibitor life expectancy is shortened by approximately 25 percent when exposed to temperatures above 104 F (40 C). This product is not recommended for use where temperature exceeds 199 F. Since Hoffman corrosion inhibitors are vapor-phase protective, all surfaces to be protected should be accessible to the vapors. The maximum distance the vapors can travel is approximately 1.50 ft. (.46 m). Protection of long, narrow enclosures can be achieved with tape or multiple inhibitors.

Storage and Handling

Each Hoffman corrosion inhibitor is individually packaged in a resealable bag for maximum effectiveness at the time of usage. Corrosion inhibitors should be stored at temperatures not exceeding 120 F (45 C). Hoffman corrosion inhibitors are not returnable.

When determining the proper corrosion inhibitor for your application, assume the enclosure volume to be protected is greater than calculated if (1) cabinet doors are opened frequently, (2) cabinet is located in an extremely corrosive area and/or (3) cabinet length divided by depth is greater than four.

AHCI1DV

Foam device protects one cubic foot (28 liters) of enclosure volume for approximately one year.
Size: .25 x 1.25 x 3.00 in. (6 x 32 x 76 mm)

AHCI5E

Emitter protects 5 ft.^{3} (142 liters) of enclosure volume for approximately two years from the date of manufacture. Emitters contain additional red metal (non-ferrous) inhibitors.
Size: 2.31 in. (diameter) x 0.81 in. (high) (59 mm x 21 mm)

AHCI10E

Emitter protects 10 ft.^{3} (283 liters) of enclosure volume for approximately two years from the date of manufacture. Emitters contain additional red metal (non-ferrous) inhibitors.
Size: 2.31 in. (diameter) x 1.38 in. (high) (59 mm x 35 mm)

AHCI60R

Tape protects 60 ft.^{3} of enclosure volume per roll. Use approximately 2.50 in. (63 mm) of tape per cubic foot (28 liters) of enclosure volume to be protected. Each roll of tape is packaged individually in a resealable bag.
Size: .25 in. x .75 in. x 12.00 ft. (6 mm x 19 mm x 3.6 m)

AHCI240R

Tape protects 240 ft.^{3} of enclosure volume per roll. Use approximately 1.00 in. (25 mm) of tape per cubic foot (28 liters) of enclosure volume to be protected. Each roll of tape is packaged individually in a resealable bag.
Size: .25 in. x 2.00 in. x 20.00 ft. (6 mm x 51 mm x 6.1 m)

AHCI238S

Spray is a non-conductive, nonflammable, vapor-phase film and is non-toxic. It has essentially neutral pH value. Application provides instant protection against corrosion. Spray is water soluble and can be easily flushed away with water if desired. This product should be kept from freezing and has a shelf life of 2+ years in normal warehouse conditions.

Bulletin: A80

Standard Product

Catalog Number	Enclosure Volume Protected (ft.^{3})	Enclosure Volume Protected (liters)	Package Qty.
AHCI1DV	1	28.32	50
AHCI5E	5	141.6	25
AHCI10E	10	283.2	12
AHCI60R	60 per roll	1699 per roll	3
AHCI240R	240 per roll	6797 per roll	1
AHCI238S	Corrosion Inhibitor Spray	Corrosion Inhibitor Spray	6

Metal Protection Chart

Metal	Protected by Chemical	Unprotected by Chemical
Aluminum	Marked reduction of surface attack; no pitting	Severe surface attack; tarnish; pitting
Brass*	Decreased tarnish; very minor surface attack	Surface discoloration; pitting
Steel, Iron	No change	Severe corrosion
Copper*	Slight staining	Heavy corrosive attack
Zinc Plate	Slight discoloration	Severe corrosion
Tin Plate	Slight discoloration	Moderate corrosive attack

* AHCI5E and AHCI10E emitters are recommended for these materials

APPENDIX T5

Bag Filter

Fulflo® EB Single Bag Filter Vessel

304 stainless steel, commercial
(non ASME code) design

The Fulflo EB non ASME code single bag filter vessels provide economical filtration of a wide variety of liquids in a lightweight, externally polished stainless steel design, with features including a swing bolt secured, quick opening cover and an internal positive pressure bag hold down device.

EB single bag vessels accommodate one #2 (double length) Parker “G” style bag with a 7" diameter rim.

These vessels are manufactured from polished and passivated 304 stainless steel and rated for 150 psi (10.3 bar).

For added corrosion resistance, all cover bolt and leg mounting hardware is made from stainless steel as well.

Benefits

- Swing bolted o-ring closure seal provides quick & positive seal with easy access to the vessel interior and filter bag
- Both FNPT threaded and ANSI B16.5 flanged connections are available in specific models
- NPT option offers dual 2" outlet ports on bottom and side locations
- EPDM seals are standard with other material options available
- Standard threaded FNPT vent & drains
- Standard stainless steel closure bolt hardware
- Polished exterior & pickle passivate interior/exterior for enhanced corrosion resistance
- Mounting legs are adjustable, providing flexibility for installation height and orientation

Applications

- Potable Water
- Cutting Oils
- Solvents
- Coolants
- Process Water
- Coatings
- Lubricant

DS_IP_ EB Single Bag Vessel 2/14 Rev. B

Fulflo® Filtration Products and Systems

Parker Fulflo® E Series Cartridge and Bag Filter Vessel Operating Instructions.

WARNING

To minimize the risk of serious injury and property damage:

- Do not exceed maximum pressure and temperature rating stamped on the vessel
- Do not attempt to open the vessel until all internal pressure has been relieved
- Read and follow instructions and safety information in this manual

Contents:

I. Shutdown Procedure (For startup, refer to section V)
II. Media Replacement – Single Cartridge Filter Vessels
III. Media Replacement – Multi Cartridge Filter Vessels
IV. Media Replacement – Bag Filter Vessels
V. Startup Procedure

Note: Store this instruction manual in the plastic bag provided and retain permanently on or adjacent to the filter vessel.

Use only Genuine Parker replacement parts.

I. Shutdown Procedure.

WARNING! Do not service this vessel while inlet or outlet valves are open or while unit contains pressure. Do not, at any time, loosen closure bolts before draining. Failure to open drain and vent will result in pressurized liquid being trapped in vessel. Pressurized liquid will spray out when the bolts are loosened which could cause serious injury or property damage.

1. Before opening vessel: Turn off pump and lock it out.
2. Close inlet and outlet valves. Inlet or pressure side should always be closed first.
3. Open vent valve. Make sure the valve is piped such that escaping fluids do not cause personal injury or property damage.
4. Check pressure gauges to make sure the vessel's internal pressure is zero. Note: A DIFFERENTIAL pressure gauge connected between the inlet and outlet WILL NOT show internal pressure. Differential pressure gauges are usually marked "PSID" on the gauge face.
5. Open bottom drain. Gravity will move fluid through drain. After vessel has drained, close drain valve.
6. Loosen cover nuts, and swing bolts and nuts away from cover. On single round cartridge vessels, remove the clamp and set aside until ready for startup.
7. Remove the cover and set aside until ready to re-assemble. Protect gasket surface from damage. On single round cartridge filter vessels, remove the bowl and set aside until ready to re-assemble.

II. Media Replacement – Single Cartridge Filter Vessels (refer to figure 1)

1. Follow shut down procedure in Section I.
2. Remove the spent cartridge and dispose per local regulations and policies.
3. If using DOE (double open end) cartridges, push the cartridge onto the guide, over the spring and against the head sealing surface. Attached the bottom seal nut and tighten securely.
4. Replace the bowl and the clamp, and refer to section V, Startup Procedures.
5. If using SOE (single open end) 222 / fin cartridges, lubricate the cartridge o-rings with a suitable lubricant or water, and push the cartridge up into the o-ring sealing gland of the head until fully seated.
6. Inspect the cover o-ring for damage and replace if necessary. Lubricate the o-ring with an appropriate substance compatible with the application.
7. Replace the bowl and the clamp, and refer to Section V, Startup Procedure.

III. Media Replacement – Multi Cartridge Filter Vessels (refer to figure 2)

1. Follow shut down procedure in Section 1.
2. If using DOE (double open end) cartridges, loosen and remove the alignment plate wing nut(s), remove the alignment plate, and remove the cartridge seal springs. Set these aside for re-assembly.
3. Remove the spent cartridges and dispose per local regulations and policies. If cartridge guides are inadvertently removed with the cartridges, place the guides back into the bottom seal cups in the vessel.
4. If using DOE (double open end) cartridges, place the cartridges over the guides and onto the bottom seal cup. Replace all of the springs (one per cartridge) and the alignment plate, and thread an alignment plate wing nut onto each alignment rod. Tighten all wing nuts evenly until secure. Compression of the plate should be ¾" to 1" minimum in order to obtain and maintain a seal.
5. If using SOE (single open end) 222 / fin or flat cartridges, lubricate the cartridge o-rings with a suitable lubricant or water, and push the cartridge into the bottom seal cup until fully seated. The use of the cartridge guides is optional for SOE 222 style cartridges. Install the alignment plate and nuts and tighten until secure. Compression of the plate and the use of the springs is not required for SOE cartridges.
6. Refer to Section V, Startup Procedure.

IV. Media Replacement – Bag Filter Vessels (refer to figure 3)

1. Follow shut down procedure in Section I.
2. Remove the bag constraint ring(s) and set aside for reinstallation. Remove the spent bag(s) from the vessel and dispose per local regulations and policies. If the bag support basket is inadvertently removed with the bag, separate the bag from the basket and re-install the basket into the vessel.
3. Insert a new bag bottom first into the support basket inside the vessel and push the bag down until the bag ring is seated against the basket rim. For best results, ensure that the bag is fully extended to the bottom of the basket. Replace the bag constraint ring.
4. For single bag vessels, the bag constraint ring and hoop combination sits directly on top of the bag ring. The top of the hoop should extend slightly above the body flange face, so that the cover will contact the hoop and exert a load onto the bag, keeping the bag from dislodging. The positive pressure of the liquid flow will create the necessary seal on the bag. Slight reshaping of the hoop may be necessary so that it extends above the flange face.
5. For multi bag vessels, each bag has a separate constraint ring that is secured by twisting the device until the rod ends are secured under the constraint clips. This will prevent the bags from dislodging. The positive pressure of the liquid flow will create the necessary seal on the bag.
6. Refer to Section V, Startup Procedure.

V. Startup Procedure

1. Clean and inspect closure o-ring and o-ring groove. Lubricate o-ring with suitable lubricant such as Parker O-Lube or Parker Super O-Lube. Ensure that the lubricant is compatible with the seal material and the application.
2. Close cover onto vessel. Do not slam the cover against the vessel. Damage to the o-ring seal or sealing surfaces may occur. Swing bolts up into position to engage cover. Hand tighten the nuts.
3. Tighten nuts in an alternate crisscross pattern. Do not apply excessive torque to the nuts as permanent distortion to the filter may result. Maximum torque applied to the bolting should not exceed the values in table 1 below.
4. On single cartridge vessels, do not over tighten the clamp bolt. Max torque is 5 ft-lb. Do not tighten under pressure. If the vessel seal leaks, disassemble, clean the o-ring and seal surfaces, and re-assemble.
5. Close drains and open vent plug.
6. Open inlet valve and allow vessel to fill slowly, taking care to not allow process fluid to spray from the vent.
7. When air is expelled from vent and liquid begins to bleed from vent, close the vent plug.
8. Open outlet valve to resume normal operation.

TABLE 1 – MAXIMUM COVER BOLT TORQUE VALUES – LUBRICATED THREADS

Nominal Bolt Diameter	Stainless Steel Bolt – Max Torque ft-lb
M12 (1/2)	30
M16 (5/8)	40
M20 (3/4)	50

GENERAL WARNINGS

WARNING! USE PROTECTIVE CLOTHING. Operator should wear protective clothing including protective gloves and face shield.

WARNING! Operating vessel with damaged or worn parts could cause serious injury and/or damage. Inspect vessel interior and all components for wear, corrosion or damage. Replace all damaged components.

WARNING! Do not exceed the operating limits that are listed the vessel nameplate / label. Property damage, serious injury or death can result if limits are exceeded.

1.0 SAFETY PRECAUTIONS

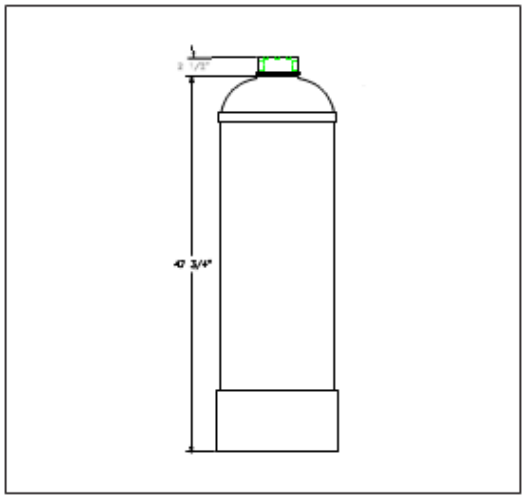
Failure to observe these precautions could result in serious bodily injury and/or property damage.

Be sure to read and understand this O & M manual before beginning operation. If you have any questions, please call Carbonair Environmental Systems, Inc. at (800) 526-4999.

Always wear gloves, eye protection & protective clothing when working with the equipment.

Obtain an activated carbon Material Safety Data Sheet (MSDS) for more detailed safety & handling information (available upon request).

WARNING: *Never work on a carbon vessel without adequate ventilation, proper atmospheric testing and safety equipment. The activated carbon depletes the air of oxygen.*



Take time to record your specific operating parameters on page 10.

2.0 EQUIPMENT DESCRIPTION

The Carbonair model PC-3F carbon adsorber is exceptionally durable and high performing. Its FRP construction offers superior strength and corrosion resistance and reliability under all operating conditions. The under drain collection system, consisting of a riser tube with a screen basket, enables full use of the carbon bed.

Copyright ©2011 Carbonair Environmental Systems, Inc.

Figure No. 1 - Typical PC-3F Unit

The following table outlines specifications of the PC-1F liquid phase carbon adsorber unit.

Table No. 1 – PC-3F Structural Specifications

#	Design Parameter	Specification
1	Dimensions	2' dia. x 5’ 11” H
2	Bed Area	2.4 square feet
3	Flow Range	1-20 gpm
4	Carbon Capacity	250 lbs.
5	Max Operating Pressure	150 psi
6	Empty Weight	85 lbs.
7	Loaded Weight	335 lbs.
8	Operating Weight	805 lbs.
9	Spent & Drained Weight	650 lbs.

3.0 PROCESS DESCRIPTION

Carbonair's PC-3F liquid phase carbon adsorber is designed to provide an efficient and economical means of removing organic contaminants from water. The PC-3F is a pressurized vessel that holds an appropriately sized bed of granular activated carbon (GAC).

Water is pumped through the vessel containing the GAC. The contaminants in the water are removed by adsorption as the water moves through the GAC bed. Several types of GAC are available for a variety of applications.

Granular activated carbon is highly porous and has a large surface area for adsorption. Adsorption is the process by which compounds adhere to the carbon surface. The portion of the carbon bed where adsorption occurs is referred to as the "mass transfer zone." The zone moves downward from the top of the bed as carbon becomes saturated with organic compound. When the bed becomes completely saturated some or all of the contaminants in the water will "breakthrough." Breakthrough occurs when the contaminant being treated is detected in the water flowing out of the vessel at levels approaching the discharge limit. The carbon should be replaced before this happens to prevent discharge permit violations.

Contaminated water is introduced into the vessel through the inlet connection and is distributed evenly over the top of the carbon bed. The pressure created by the influent pump forces the contaminated water down through the carbon bed. Once the water reaches the base of the carbon bed the contaminates have generally been removed. The clean water is then collected through a screen basket and riser tube, and exits the vessel through the outlet connection at the top.

The PC-3F is a pressurized vessel and is completely filled with water during operation. (No air should be in the vessel).

4.0 INSTALLATION

Be sure to carefully read all installation instructions before beginning the installation of the PC-3F pressurized carbon vessel.

Copyright ©2011 Carbonair Environmental Systems, Inc.

4.1 Inspection

1. Upon receiving the vessel, inspect the tank, fittings, and piping for structural or cosmetic damage.

2. If the vessel is shipped without carbon loaded, inspect the vessel interior and exterior for chips and/or cracks. If chips or cracks are identified, particularly on the interior surface, document the location and contact Carbonair immediately.

3. Before the vessel is set vertically in place, an inspection of the internals should be performed. This is necessary because it is possible that during transportation some of the internal piping may have been loosened.

4. Open the top fitting and inspect the inside of the tank using care not to impact any of the internal fittings.

WARNING: *Never work on the PC-3F vessel without adequate ventilation, proper atmospheric testing and safety equipment. The activated carbon depletes the air of oxygen.*

5. Once this is completed, reinstall the top fitting. DO NOT over tighten. Over tightening of the top fitting may cause the gasket to extrude and leaks to occur.

.

Do not operate any pressure vessel that has been structurally damaged. Operation of a damaged pressure vessel could result in personal injury or further damage to the carbon adsorber.

4.2 Loading & Unloading Vessel

Be sure to follow proper safety procedures when loading & unloading the PC unit.

The PC-3F adsorber should be unloaded and placed by an appropriately sized crane or forklift operated by an experienced crane operator. An empty vessel weighs approximately 83 lbs. and a loaded one weighs 335 lbs. - excluding external piping. It is recommended to fill the vessel in place. The vessel should be set square on the base or the base may crush or break. The unit should **not** be moved with wet carbon. The vessel must be serviced in place or damage will result to the base.

The PC-3F must be placed on a level concrete pad designed to handle the full operating load of the vessel (**refer to Table 1)**. The carbon adsorber should be anchored prior to filling with carbon and operating.

4.3 Connections

Assemble and mount all of the piping, valves, and instrumentation after the vessel is in place. Make sure that the piping is adequately supported and isolated with expansion joints so that excessive load or torque is not placed on the vessel fittings.

5.0 START-UP

Prior to starting up the unit, carbon must be added to the vessel. Refer to Section 8.1 for specific carbon loading procedures.

To ensure optimum performance of the carbon adsorber, the carbon should be thoroughly backwashed prior to its initial use. The backwash will remove most of the carbon fines to allow for better water distribution and reduce pressure drop through the carbon during normal operation. **Refer to Section 8.3 for detailed backwashing procedures.**

Bleed any air from the vessel by slowly opening the bleed valve at the top of the unit while filling with water..

Copyright ©2011 Carbonair Environmental Systems, Inc.

The operating flow range for the vessel is 1-20 gallons per minute. At initial start-up, the pressure drop through the vessel should be approximately 1-5 psi, depending on the flow rate.

6.0 OPERATION

During operation, the pressure drop through the vessel may begin to increase. The differential pressure should be monitored on a regular basis, and should not be allowed to exceed 15-20 psi. If the differential pressure reached 15-20 psi, the vessel should be taken off line and a backwash should be initiated.

> ***Operating the vessel at differential pressures greater than 20 psi may cause damage to the vessel's interior components.***

For proper operation, and to prevent possible damage to the vessel, it is important that the vessel remain completely filled with water during operation and temporary shutdown. Bleed any air from the vessel by slowly opening the bleed valve at the top of the unit when filling the vessel. The discharge-piping configuration should be designed to maintain the level in the tank, and to ensure that a vacuum does not develop in the pressure vessel.

Be sure never to exceed the maximum design flow rate of 20 gpm or damage to the unit may result.

7.0 TROUBLE SHOOTING

There are a few situations that may arise while operating the PC-3F which can adversely effect the performance of the unit and/or result in abnormally high maintenance costs. If these situations cannot be resolved using the following trouble shooting guide contact Carbonair at (800) 526-4999.

Situation #1:
Water cannot be pumped through the vessel at the design flow and pressure. (Pressure drop build up across the vessel).

Probable Cause:
If this occurs, the water flow is being restricted somewhere between the inlet opening and the outlet opening of the vessel (assuming there are no restrictions on the downstream side of the outlet). The most common causes for this pressure drop build up are:

- Sediment/solids in the water stream have clogged the pores in the carbon bed restricting water flow
- Chemical or biological fouling has occurred forming an encrusted layer at the top of the carbon bed
- The slotted piping at the base of the vessel are clogged with some foreign material

Solution:

- When pressure drop approaches the maximum recommended pressure drop listed in the manual, the system should be shut down and vessel drained to relieve the pressure. Also relieve the pressure on the influent line and check the inlet pressure gauge to ensure the pressure has been relieved. Open the top fitting and visually inspect the top of the carbon bed. Be sure not to let the fitting O-ring fall into vessel.
- If the top of the carbon bed appears encrusted or has a layer of foreign material on top of it, probe the top of the bed with a rod or chisel. If the bed is encrusted you will need to break up the encrusted layer into granular form prior to backwashing.
- While the vessel is open inspect the influent piping for obvious signs of wear and inspect the walls of the vessel for signs of corrosion or cracking.
- Replace the top fitting being sure to remove any carbon from the O-ring material as this may cause

Copyright ©2011 Carbonair Environmental Systems, Inc.

channels in the seal around the O-ring and allow some water to leak out.
• Proceed with the backwash procedure as outlined in Section 8.3 of this manual. This will normally remove the solids from the bed and allow you to resume normal operation.

Note: If the pressure drop during backwash exceeds the maximum listed in Section 8.3 immediately stop the backwash and call Carbonair for input.

Situation #2:
Breakthrough occurs much sooner than anticipated.

Probable Cause:
Premature breakthrough can be caused by several factors assuming you are operating at or near the design flow rate:

• Actual concentrations of contaminations may be higher than the design contaminant concentrations.
• Additional contaminants may be present in the water stream that was not taken into account in the design.
• Air in the vessel or flow restrictions may be causing the water to "channel" in the bed, effectively bypassing a portion of the GAC and thereby reducing the bed life.

Solution:
• Sample and analyze your influent water system to determine if the design contaminants are present at or near the design concentrations and that no additional contaminants are present.
• If the contaminants and/or concentrations are significantly different from the design criteria, contact Carbonair for input and a recommended solution.
• If the influent water chemistry is the same as or close to the design criteria, check to make sure that there are no air pockets in the vessel during operation. Air pockets will cause the water to channel in the carbon bed and may cause premature breakthrough.
• Also, check for encrustation of the carbon. Chemical fouling may cause sections of the bed to become impermeable, which causes channeling. If you discover the carbon is becoming encrusted, be sure to perform frequent maintenance checks of the carbon during operation and break up the encrusted areas. You may also need some type of pretreatment to remove the hardness from the water before it enters the vessel. Call Carbonair if you have any questions.

Situation #3:
GAC in the effluent water.

Probable Cause:
If GAC is detected in the effluent water the under drain system has probably been damaged.

Solution:
• Stop the operation immediately. Drain the vessel and remove enough carbon to visually inspect the under drain system. This inspection can best be accomplished through the top fitting.
• Inspect the under drain system for cracks or other damage. Replace any damaged pipes and make sure replacement materials are properly installed. Call Carbonair with any questions.

Situation #4:
Water dripping from the base of the vessel.

Probable Cause:
Water leaks may occur at the inlet and outlet connections on the vessel. In addition, because the water being treated is often 55° F or lower temperatures, significant condensation may occur on the sides of the vessel in hot, humid environments.

Solutions:
• If you detect water draining from the base of the vessel check all connection points and fittings for

leaks. Remember that carbon granules on the O-rings may cause leaks.
• Also, determine if significant condensation is occurring due to high humidity in the area around the vessel. If extensive condensation is a problem you can either adjust the humidity in the area around the vessel or make sure there is a drain under the vessel to receive the condensate water.

8.0 MAINTENANCE

There are several maintenance tasks that must be performed periodically to ensure continued, trouble free operation. These tasks are discussed in subsequent sections.

The most effective way of removing the water from the tank is by blowing the water out of the tank via compressed air. This can be done in two ways, you can place an air quick coupling with a valve on the inlet line coming into the tank or the other option would be to remove the 1/4" plug in the middle of the head and place a valve and air quick connect into the 1/4" hole.

When you are in need of blowing the water out of the system shut your influent water off and hook up your air compressor to either one of your quick connects that you choose to do. Slowly open the valve to allow the air to flow into the tank and push the water out of the tank through the outlet of the tank. The tanks are designed to handle 120psi, you should not have to exceed 50 psi to get all of the water out, do not over pressurize the tank.
Once all the water has been displaced shut off the air flow. When removing the tank head make sure the tank is not under pressure. You may want to include a valve that allows the release of air from the tank.

This is a simple process, you will want an air compressor that has some volume to it and you want to be able to control the air flow from the air compressor through the tank either by a regulator or a valve.

8.1 <u>Fresh Carbon Loading - Dry Method</u>

Dry carbon will typically be delivered in 55 lbs. bags. A funnel and razor knife can be used to aid in the loading of the carbon. A quality dust mask and protective clothing should be worn when handling dry, granulated carbon.

Please follow recommended procedure for ease of loading the dry carbon:

1. Remove the fitting on the top of the unit.

2. Tape the top of the riser tube so that it doesn't fill with carbon.

3. Place funnel, if available, into vessel opening.

When loading carbon, workers must be protected from breathing the fine carbon dust particles - a particle mask is usually sufficient. In addition, eye goggles and protective coveralls are required.

4. Using a razor knife, cut open the top of the carbon bag.

5. Lift the carbon bag using proper lifting techniques, and pour the carbon into the funnel or vessel opening.

6. Repeat until 250 lbs. of carbon has been installed in the vessel.

7. Remove tape from the riser tube.

8. Reinstall the top fitting and any other piping/equipment.

Copyright ©2011 Carbonair Environmental Systems, Inc.

9. Fill vessel completely with clean water, allowing the air to escape out the air bleed port, and allow to soak prior to treating the process water.

Note: ***If any foreign material begins to come out of the bag during the carbon loading procedure, make sure that the foreign material does not enter the adsorber.***

8.2 Spent Carbon Removal - Vacuum System

Periodically, the spent carbon will have to be removed and replaced to optimize the contaminant removal performance of the unit. The spent carbon must be removed and replaced with new virgin or reactivated carbon.

WARNING: ***Before attempting to remove the carbon from the vessel it must be understood that the material may be considered hazardous waste. Consequently, the use of respirators and protective clothing is strongly recommended.***

A vacuum system will be needed to remove the spent carbon from the vessel. The top fitting will need to be removed. Carbon can then be vacuumed from the vessel and placed in proper containers for disposal.

The spent activated carbon can be sent to Carbonair for reactivation or a licensed reactivation facility for recycling. However, before the contaminated material can be shipped, a "Spent Carbon Notice of Return Form" must be completed and sent to Carbonair. Other forms may also be required depending on the hazardous/non-hazardous classification of the contaminants adsorbed. Carbonair will not accept spent carbon until all the necessary forms have been completed.

8.3 Backwash Procedure

Be sure to read this section completely and understand the procedure before conducting a backwash on the PC-3F pressurized carbon vessel.

Your pressure vessel will need to be backwashed to eliminate carbon fines prior to start-up, or to eliminate other sediment that may build up in the carbon during normal operation. Backwashing is accomplished by pumping **SEDIMENT-FREE** water from a **CLEAN SOURCE** into the effluent line and out through the influent line at the specified flow rate.

It is critical that sediment-free water be used to prevent clogging inside of the laterals. Clogging of the laterals could cause damage to the vessel internals. It is recommended that the water be filtered through a 100-micron or smaller filter prior to use.

Prior to backwashing you must open the top fitting of the vessel to inspect the top of the carbon bed. Once the top fitting is removed, it is recommended to probe the top of the carbon bed to determine if the top layer of the carbon has hardened or become encrusted due to biological fouling. If the top of the bed is encrusted or hardened, it should be broken up into granular form prior to conducting a backwash. This can be accomplished by piercing the top of the bed repeatedly with metal rod or chisel.
The following guidelines must be followed when conducting a backwash.

Note: ***Failure to follow these instructions may result in severe damage to the carbon vessel.***

Copyright ©2011 Carbonair Environmental Systems, Inc.

If the encrusted carbon cannot be broken up in a granular form, DO NOT CONDUCT A BACKWASH. Please call Carbonair immediately for direction (800) 529-4999

1. Connect a water line from your filtered clean water source to the effluent line of the carbon adsorber. Also, you must configure the piping to the influent line so that it is possible to view the discharge of the backwash that will be discharged from the influent line.

Remember to use only clean, sediment-free water for backwash. The water should be virtually free from suspended solids and preferably should be filtered prior to introduction to the vessel. Filtration can be accomplished by using a bag filter (100 micron or smaller).

2. It is very important that the pressure differential (DP) between the effluent and influent line be closely monitored during backwash. This pressure differential can be monitored by reading the pressure gauges on the influent line and effluent lines.

The DP between the effluent and influent lines must not exceed 20 psi. DPs greater than 20 psi may cause damage to the internal piping assembly in the carbon vessel.
If you have any questions about monitoring the pressure differential, please call Carbonair for input prior to conducting a backwash. Carbonair can provide you with pressure gauges if your system is not currently equipped with gauges.

If the pressure differential exceeds 20 psi at any time during the backwash, the pump should be immediately shut down to avoid damage to the vessel internals.

3. The recommended backwash flow rate for your vessel is 8-12 gpm per square foot surface area, which is a flow rate of 20-30 gpm for a PC-3F. When initiating backwash, the flow rate to the vessel should be started very low and then gradually increased to the recommended flow rate as the pressure differential allows. The flow should be regulated by a manual valve prior to the effluent port of the vessel. The DP should be closely monitored during this increase in flow rate.

Note: ***If there are any questions regarding any of these instructions, please call Carbonair before initiating backwash.***

Carbonair will not be held liable for damage to the vessel, personal injury, or other damages to property or body caused by improper operation during backwash or normal operation

8.4 <u>Vessel Inspections</u>

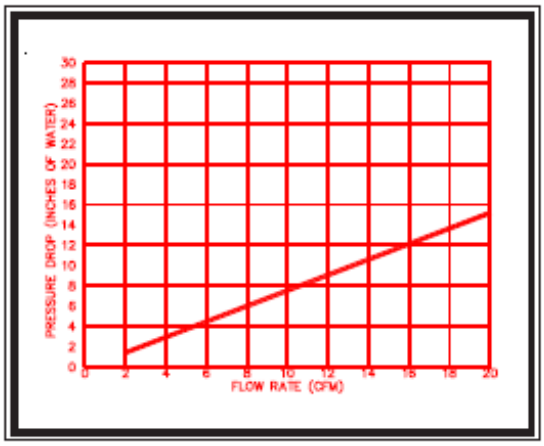
Inspect the internal pipes for cracks and other signs of wear. Also inspect the tank sidewalls for signs of wear or flaking in the resin. If signs of wear or damage are present, contact Carbonair for recommended service procedures.

Continued use of a damaged vessel may cause other problems. Carbonair will not be responsible for any damage caused by operation of a damaged vessel.

8.5 <u>Waste Disposal</u>

Proper disposal of spent carbon is essential. Be sure to follow all local, state and federal regulations for handling, storing, transportation, disposal and reactivation of spent carbon.

9.0 SPARE PARTS



When ordering spare parts, refer to the drawings at the end of the manual. Be sure to provide the vessel model and the complete description of the part.

Recordall® Disc Meters

Lead-Free Bronze Alloy Models 120 & 170, Sizes 1-1/2" (40 mm) & 2" (50 mm), NSF/ANSI Standards 61 and 372 Certified

DESCRIPTION

The Recordall Models 120 and 170 Disc Series meters meet or exceed the most recent revision of AWWA Standard C700 and are available in a lead-free bronze alloy. Both meters comply with the lead-free provisions of the Safe Drinking Water Act, are certified to NSF/ANSI Standards 61 and 372 (Trade Designations: M120-LL and M170LL) and carry the NSF-61 mark on the housing. All components of the lead-free bronze alloy meter (housing, measuring element, seals, and so on) comprise the certified system.

Applications: For use in measurement of potable cold water in residential, commercial and industrial services where flow is in one direction only.

Operation: Water flows through the meter's strainer and into the measuring chamber where it causes the disc to nutate. The disc, which moves freely, nutates on its own ball, guided by a thrust roller. A drive magnet transmits the motion of the disc to a follower magnet located within the permanently sealed register. The follower magnet is connected to the register gear train. The gear train reduces the disc nutations into volume totalization units displayed on the register or encoder face.

Operating Performance: The Recordall Disc Series meters meet or exceed registration accuracy for the low flow rates (95%), normal operating flow rates (100 ± 1.5%), and maximum continuous operation flow rates as specifically stated in AWWA Standard C700.

Construction: Recordall Disc meter construction, which complies with ANSI/AWWA standard C700, consists of three basic components: meter housing, measuring chamber, and permanently sealed register or encoder. The water meter is available in a lead-free bronze alloy. A corrosion-resistant engineered polymer material is used for the measuring chamber.

Magnetic Drive: Direct magnetic drive, through the use of high-strength magnets, provides positive, reliable and dependable register coupling for straight-reading or AMR/AMI meter reading options.

Tamper-Proof Features: Unauthorized removal of the register or encoder is inhibited by the option of a tamper detection seal wire screw, TORX® tamper-resistant seal screw or the proprietary tamper-resistant keyed seal screw. Each can be installed at the meter site or at the factory.

Maintenance: Badger Meter Recordall Disc Series meters are designed and manufactured to provide long-term service with minimal maintenance. When maintenance is required, it can be performed easily either at the meter installation or at any other convenient location.

To simplify maintenance, the register, measuring chamber, and strainer can be replaced without removing the meter housing from the installation. No change gears are required for accuracy calibration. Interchangeability of parts among like-sized meters minimizes spare parts inventory investment. The built-in strainer has an effective straining area of twice the inlet size.

Connections: Companion flanges in cast iron or NL bronze are available as options. Straight connection sets are available in NL bronze.

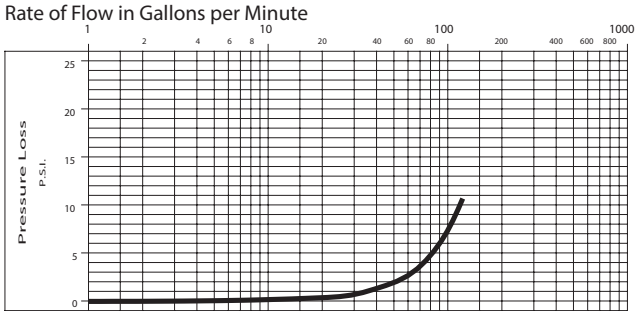
REGISTERS / ENCODERS

Standard—Sweep-Hand Registration

The standard register is a straight-reading, permanently sealed magnetic drive register. Dirt, moisture, tampering and lens fogging problems are eliminated. The register has a six-odometer wheel totalization display, 360° test circle with center sweep hand, and flow finder to detect leaks. Register gearing is made of self-lubricating engineered polymer, which minimizes friction and provides long life. The multi-position register simplifies meter installation and reading. The register capacity is 10,000,000 gallons (1,000,000 ft³, 100,000 m³).

Meter Model	Gallon	Cubic Feet	Cubic Meter
120	100	10	1/0.1
170	100	10	1



Optional—Encoders for AMR/AMI Reading Solutions

AMR/AMI solutions are available for all Recordall Disc Series meters. All reading options can be removed from the meter without disrupting water service. Badger Meter encoders provide years of reliable, accurate readings for a variety of applications and are also available pre-wired to Badger Meter approved AMR/AMI solutions. See details at **www.badgermeter.com**.

Recordall® Disc Meters

Engineered Polymer, Sizes 5/8", 5/8" × 3/4", 3/4" and 1"
NSF/ANSI Standards 61 and 372 Certified

Model 25

Model 40

DESCRIPTION

The Recordall Engineered Polymer Disc Series meters meet or exceed the most recent revision of AWWA Standard C710. Recordall Engineered Polymer Disc Series meters comply with the lead-free provisions of the Safe Drinking Water Act, are certified to NSF/ANSI Standards 61 and 372 (Trade Designations: M25 PN and M40 PN) and carry the NSF-61 mark on the housing. All components of the lead-free, engineered polymer meter (disc, chamber, housing, seals, and so on) comprise the certified system.

Applications: For use in measurement of potable cold water in residential, commercial and industrial services where flow is in one direction only.

Operation: Water flows through the meter's strainer and into the measuring chamber where it causes the disc to nutate. The disc, which moves freely, nutates on its own ball, guided by a thrust roller. A drive magnet transmits the motion of the disc to a follower magnet located within the permanently sealed register. The follower magnet is connected to the register gear train. The gear train reduces the disc nutations into volume totalization units displayed on the register or encoder face.

Operating Performance: The Recordall Disc Series meters meet or exceed registration accuracy for the low flow rates (95%), normal operating flow rates (100 ± 1.5%), and maximum continuous operation flow rates as specifically stated in AWWA Standard C710.

Construction: Recordall Disc meter construction, which complies with ANSI/AWWA standard C710, consists of three basic components: meter housing, measuring chamber, and permanently sealed register or encoder. The water meter is engineered polymer with externally-threaded spuds. A corrosion-resistant engineered polymer material is used for the measuring chamber.

Magnetic Drive: Direct magnetic drive, through the use of high-strength magnets, provides positive, reliable and dependable register coupling for straight-reading or AMR/AMI meter reading options.

Tamper-Proof Features: Unauthorized removal of the register or encoder is inhibited by the option of a tamper detection seal wire screw, TORX® tamper-resistant seal screw or the proprietary tamper-resistant keyed seal screw. Each can be installed at the meter site or at the factory.

Maintenance: Badger Meter Recordall Disc Series meters are designed and manufactured to provide long-term service with minimal maintenance. When maintenance is required, it can be performed easily either at the meter installation or at any other convenient location.

To simplify maintenance, the register, measuring chamber, and strainer can be replaced without removing the meter housing from the installation. No change gears are required for accuracy calibration. Interchangeability of parts among like-sized meters and meter models also minimizes spare parts inventory investment. The built-in strainer has an effective straining area of twice the inlet size.

Connections: Tailpieces/Unions for installations of meters on various pipe types and sizes, including misaligned pipes, are available as an option.

REGISTERS / ENCODERS

Standard—Sweep-Hand Registration

The standard register is a straight-reading, permanently sealed magnetic drive register. Dirt, moisture, tampering and lens fogging problems are eliminated. The register has a six-odometer wheel totalization display, 360° test circle with center sweep hand, and flow finder to detect leaks. Register gearing is made of self-lubricating engineered polymer, which minimizes friction and provides long life.
The multi-position register simplifies meter installation and reading. The register capacity is 10,000,000 gallons (1,000,000 ft^3, 100,000 m^3).

A Model 25 register is used in this example:

Meter Model	Gallon	Cubic Feet	Cubic Meter

Optional—Encoders for AMR/AMI Reading Solutions

AMR/AMI solutions are available for all Recordall Disc Series meters. All reading options can be removed from the meter without disrupting water service. Badger Meter encoders provide years of reliable, accurate readings for a variety of applications and are also available pre-wired to Badger Meter approved AMR/AMI solutions. See details at **www.badgermeter.com**.

Badger Meter

Recordall®

Transmitter Register (RTR)

DESCRIPTION

APPLICATIONS: The Recordall® Transmitter Register (RTR®) is designed for use with all Recordall Disc, Turbo, Compound and Fire Service Meters to provide output compatibility with ORION®, GALAXY, Itron® ERT®, and Badger Meter, Inc. approved AMR technology solutions.

RESOLUTION: Digital output from the RTR typically has resolution of 1/10th of the register test circle (resolution may vary in some cases). The electronic resolution table in this brochure lists minimum output resolution for all Recordall meter applications.

MOUNTING: The RTR in its shroud assembly uses a bayonet mount compatible with all Recordall Disc and Turbo meters. A TORX® seal screw is provided to allow positioning of the register for the most convenient reading and to secure the register to the meter body in a tamper resistant mode. The RTR can be removed from the meter without disrupting water service.

MAGNETIC DRIVE: Direct drive high-strength magnetic coupling through the meter body to the wetted magnet provides reliable and dependable register coupling.

SEALED REGISTER: The RTR local register consists of a six-digit straight-reading mechanical odometer totalizer (located in the six o'clock position), a 360° test circle with sweep hand, and a flow finder to detect leaks. The register gearing is self-lubricating thermoplastic to minimize friction and provide long, reliable life. Permanent sealing eliminates moisture, dirt, and other contaminants. The leak rate of the seal is less than 10-6 cc/sec as tested by a helium mass spectrometer.

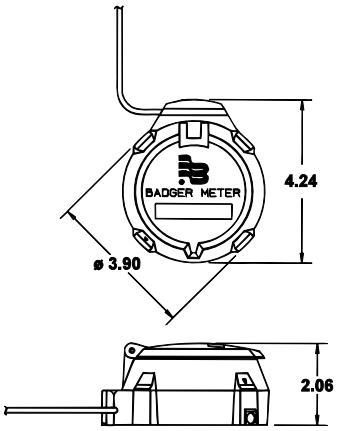
TAMPER-PROOF FEATURES: Customer removal of the RTR can be prevented by using a tamper resistant TORX seal screw. TORX seal screws are provided as standard accessories with the RTR. Optional tamper detection seal wire screws are also available.

CONSTRUCTION: The housing of the RTR is constructed of a strengthened glass lens top and a corrosion-resistant metal bottom. Internal construction materials are thermoplastics for long-life and high reliability. The integrity of the adhesive seal joining the glass top to the metal base provide unmatched protection in water meter applications. A corrosion and tamper resistant TORX seal screw is provided to secure the RTR to the meter. The shroud assembly is thermoplastic.

TEMPERATURE: The operating range of the RTR is –40…49° C (–40…120° F). The water meter should not be subjected to temperatures below freezing.

MOISTURE: The RTR achieves true water resistance due to the adhesive technology used in the sealing process. Leak rates less than 10-6 cc/sec, as tested by a helium mass spectrometer, are comparable to a true hermetic seal. Due to this unique sealing process, the RTR exceeds all applicable requirements of AWWA Standard C707 regarding moisture intrusion. Register fogging and condensation are no longer an issue.

WIRE CONNECTIONS: The RTR is provided as either a factory prewired assembly or as a register with pre-sized wire harness available for connection in the field.



SPECIFICATIONS

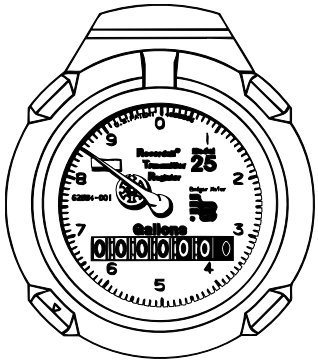
Transmitter/Register	Straight reading, permanently sealed, magnetic drive
Unit of Measure	U.S. gallons, cubic feet, cubic meters, clearly identified on register face
Number Wheels	Six with 3/16" high numerals font type
Test Circle	360° circle with ten major increments with ten divisions each
Weight	9 ounces
Humidity	0…100% condensing
Temperature	–40…49° C (–40…120° F)
Signal Characteristics	Open Drain (FET)
Visual Resolution	1/100th of Test Circle
Electronic Resolution	1/10th of Test Circle
Typical Signal Duration	15…75 ms @ 25° C (77° F) 8…75 ms over operating temperature range at 67 µA
On State Resistance	7.5 Ohms @ 25° C (77° F)
Power Source	External
Maximum Switching	30V DC @ 1 mA @ 25° C (77° F)

ELECTRONICS: The piezoelectric switch circuit board is completely sealed against moisture inside the unit and sealed to ensure protection from humidity.

ELECTRICAL: The electronic circuitry is designed to provide immunity to electrical surges and transients per IEC801-2, IEC801-4 Severity Level 4.

OPERATING CHARACTERISTICS: The RTR has an output equal to 1/10th of the meter test circle with the characteristics of an open drain FET. The on-state condition is a solid-state switch closure. Off-state condition is an open circuit. Powered by an external source, the RTR has a maximum rating of 30V DC at 1 mA (25° C).

Dimensional Drawing



MEASUREMENT RESOLUTION: The minimum electronic resolution of the RTR is as noted below. To verify the correct resolution for your application, contact your Badger Meter regional sales office.

RECORDALL Disc Series	Size	Resolution Gallons	Resolution Cubic Feet (ft^3)	Resolution Cubic Meters (m^3)
M25	5/8″	1	0.1	0.01
M25	3/4″	1	0.1	0.01

Badger Meter

Recordall® Transmitter Register (RTR®)
Remote Electronic Display (RED)

APPLICATION

The Model RED Remote Electronic Display unit is designed to provide remote visual readings when connected directly to any of Badger's Recordall® Transmitter Registers (RTR®). The RED is used to read compatible RTR transmitters that are not easily accessible or are in difficult to read locations. Installations such as inside houses or buildings, meter vaults, or dangerous industrial locations are ideal for the RED. The RED can also be used when old style generators have been replaced with RTR style transmitters to provide dependable remote readings.

OPERATION

The Model RED is a battery operated device. When attached to any of Badger's RTR transmitters it is designed to provide the same output resolution as the RTR. To conserve battery life the LCD is awakened only when the internal membrane switch has been activated. This is easily accomplished by tapping the target circle on the register display. This will bring up the meter's current reading for 20 seconds, after which the display will return to the sleep mode. The RED is easily programmable in the field by tapping of a PIN number on the front of the display. The RED will display and increment all digits of the RTR register including the sweep hand position, but will use a decimal point to show which are significant for billing purposes. Billing digits are those to the left of the decimal point

OPERATING PERFORMANCE

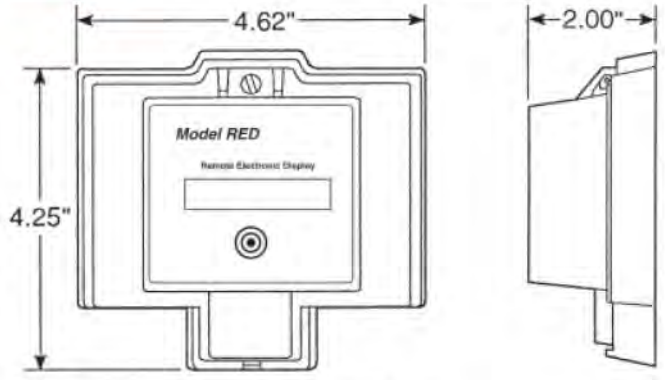
The Model RED meets AWWA Standard C706 for direct-reading remote registration systems.

TAMPER-PROOF FEATURES

The Model RED is supplied with an anti-tamper indicator that detects both open and short circuit conditions. Any time the connection is interrupted a visual alarm appears on the display (tamper designated as an "E" appears in the far left side of the reading.) To reset the tamper, the RED must be reprogrammed. The unit is also supplied with a tamper resistant TORX® seal screw to prevent access to the unit.

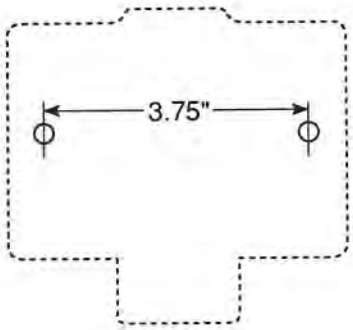
MAINTENANCE

There is no maintenance since the electronics and battery are encapsulated and not accessible.



FEATURES

- Environmentally sealed
- Field programmable
- Tamper indicator
- One model usable with any Badger® meter equipped with an RTR
- Mounts on Badger ROM Footprint
- TORX® seal screw security
- Membrane "TAP" switch for viewing
- 10 year projected battery life



SPECIFICATIONS

Operating Temperature	-13 to 140°F (-25 to 60°C)
Meter Compatibility	Any Badger meter equipped with an RTR; and Magnetoflow® mag meters
Connectivity	All Badger RTR transmitter and summator/splitter products
Dimensions	L 4.25" x W 3.9" x H 1.6"
Weight	0.3 Lbs.
Display	LCD, 8 characters .25 inches high; 7 digits for meter reading plus 1 character for system indicators
Power	(1) AA cell battery
Construction	High impact thermoplastic,weather and UV resistant
Wire Size & Distance	Utilizes a RTR connecting cable up to 75 feet long (available from the factory).

APPENDIX T8

Pressure Switch

WEATHERPROOF DIAPHRAGM OPERATED PRESSURE SWITCHES

Visible Setpoint, Fixed Deadband, Pressure Ranges to 1400 psi

With extremely rugged construction the **SERIES 1000W** provides excellent reliability in chemical, petroleum and industrial plants. Bellville spring movement permits mounting of control in any position and helps prevent contact chatter. New design also provides high over-pressure protection. Weatherproof housing is standard.

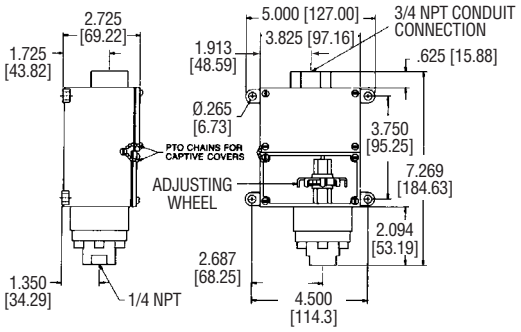
FEATURES/BENEFITS
- Weatherproof housing is ideal for a wide variety of applications where dust or water is present
- Spring movement design provides for control in any mounting position and prevents contact chatter reducing false or inconsistent switching

APPLICATIONS
- Chemical, petroleum, food and drug processing industries
- Process and Industrial applications

SPECIFICATIONS

Wetted Materials: See pressure chamber and diaphragm material in model chart.
Temperature Limits: -30 to 170°F (-35 to 77°C).
Pressure Limit: 3000 psig (206.8 bar).
Enclosure Rating: Weatherproof, meets NEMA 4X (IP66).
Switch Type: SPDT snap switch.
Electrical Rating: 15 A @ 125/250 VAC resistive.
Electrical Connections: Screw type.
Conduit Connection: 3/4″ female NPT.
Process Connection: 1/4″ female NPT.
Mounting Orientation: Any position.
Set Point Adjustment: Internal thumbwheel.
Weight: 3 lb (1.4 kg).
Deadband: See model chart.
Agency Approvals: CE, UL.

MODEL CHART



Aluminum Pressure Chamber Polyamide Diaph. Model	Price	316 SS Pressure Chamber FEP Diaph. Model	Price	Adjustable Operating Range psig (bar)	Approx.* Deadband (Fixed) psig (bar)
1003W-A1-D	$283.00	1003W-B3-D	$327.00	5 to 40 (.48 to 2.8)	2 (.14)
1004W-A1-D	283.00	1004W-B3-D	327.00	10 to 70 (.69 to 4.8)	4 (.28)
1005W-A1-D	283.00	1005W-B3-D	327.00	25 to 200 (1.7 to 13.8)	8 (.55)
1006W-A1-D	283.00	1006W-B3-D	327.00	50 to 350 (3.5 to 24.1)	15 (1.0)
1007W-A1-D	283.00	1007W-B3-D	327.00	75 to 550 (5.2 to 37.9)	30 (2.1)
1008W-A1-D	283.00	1008W-B3-D	327.00	100 to 900 (6.9 to 62.1)	50 (3.5)
1009W-A1-D	283.00	1009W-B3-D	327.00	200 to 1400 (13.8 to 96.5)	75 (5.2)

*Deadband 10-15% larger when using 316 SS diaphragm.
Note: To order, change A1 to B2 for 316 SS diaphragm and pressure chamber.
Example: 1003W-B2-D. Values shown are for mid-scale.

Series 1000W Diaphragm Operated Pressure Switches

Installation and Operating Instructions

This control is operated by a negative-rate Bellville spring-augmented diaphragm.

Location and Mounting
Select a location recommended by the equipment manufacturer. Use the four (4) lugs on the case to mount the control on a panel or smooth wall surface, or mount directly by the pressure connection.

The control is not position-sensitive and may be mounted in any position. However, vertical is preferred when there is a possibility of sludge accumulation or condensed water freezing in the pressure chamber.

Pressure Connection
The pressure connection is a standard female 1/4″ NPT taper pipe thread. Pipe thread sealant tape or pipe thread sealant should be used to assure a pressure-tight joint.

Wiring
A 3/4″ conduit connection is provided for wiring. Wire in accordance with local electrical codes or equipment manufacturer's instructions. Use a short piece of BX between rigid conduit and control so that control will not be subject to the stress of conduit expansion and contraction. Electrical ratings are shown on the label.
DO NOT OVERLOAD

Setting Operating Point
Remove the transparent cover over the adjusting wheel. Move the wheel by hand to the desired pressure on the vertical scale. If the adjusting wheel is difficult to move, a small screwdriver inserted in the adjusting wheel arms will provide extra leverage. A stop is provided at the top and bottom of the scale to prevent setting beyond the control's range. Dial markings are for the High operating point. Switch will reset at a lower pressure. Dial markings are a guide for setting. Actual setting should be checked with a good pressure gage.

Warning: A failure resulting in injury or damage may be caused by overpressures, excessive vibration or pressure pulsation, excessive temperature, corrosion of pressure-containing parts and movement assembly, electrical overload or other misuse.

SPECIFICATIONS
Wetted Materials: Aluminum pressure chamber with polyimide diaphragm or 316 SS pressure chamber with FEP diaphragm.
Temperature Limits: -30 to 170°F (-35 to 77°C).
Pressure Limit: 3000 psig (206.8 bar).
Enclosure Rating: Weatherproof, meets NEMA 4X.
Switch Type: SPDT snap switch.
Electrical Rating: 15A @ 125/250 VAC resistive.
Wiring Connections: Screw type.
Conduit Connection: 3/4″ female NPT.
Process Connection: 1/4″ female NPT.
Mounting Orientation: Any position.
Set Point Adjustment: Internal thumbwheel.
Weight: 3 lb (1.4 kg).
Deadband: See chart
Agency Approvals: CE, UL.

Note: When used on steam, a pigtail siphon and Type 3 (FEP) diaphragm should be used. Maximum case ambient temperature: 170° F (76.7° C).

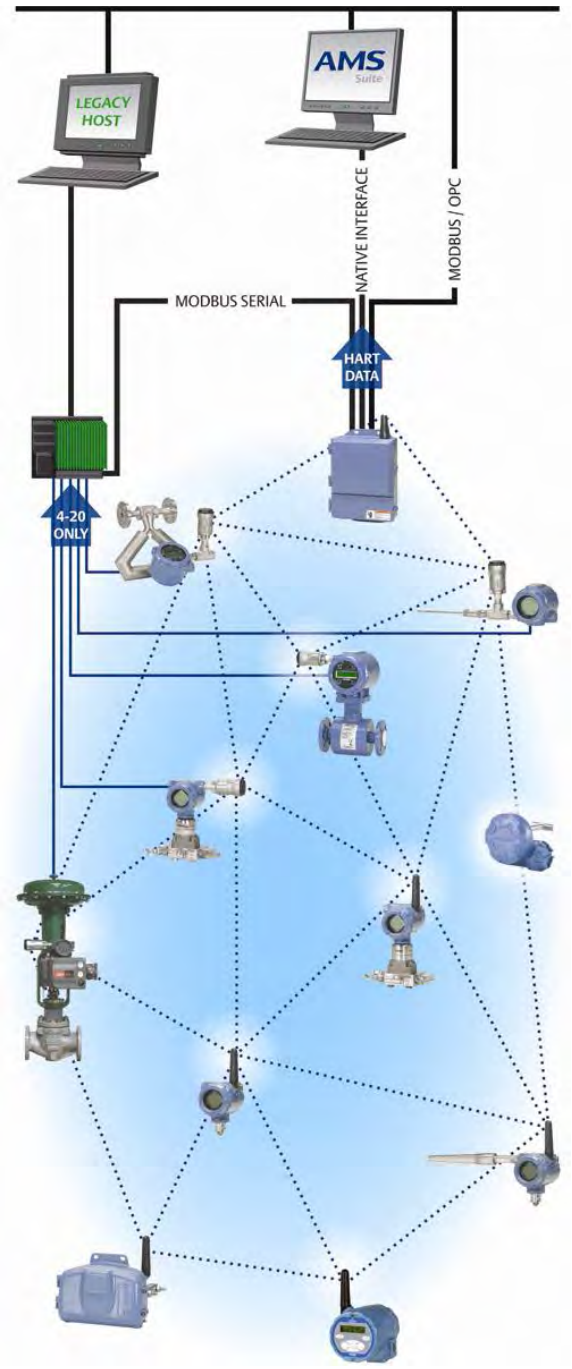
Wireless Alarm Transmitters

Product Data Sheet
August 2016
00813-0100-4702, Rev JB

Rosemount™ 702 Wireless Discrete Transmitter



WirelessHART IEC CE

- An installation-ready solution that provides dual channel, discrete input, discrete output, or leak detection input options
- Discrete single or dual switch input with logic for limit contact and opposing contact applications
- Momentary inputs are continuously measured between wireless updates
- Dual channels are each configurable for discrete input or discrete output
- Self-organizing network delivers information rich data with >99% data reliability

EMERSON
Process Management

Emerson's Smart Wireless Solution

IEC 62591 (*Wireless*HART®)... the industry standard

Self-organizing, adaptive mesh routing

- No wireless expertise required, network automatically finds the best communication paths
- The self-organizing, self-healing network manages multiple communication paths for any given device. If an obstruction is introduced into the network, data will continue to flow because the device already has other established paths. The network will then lay in more communication paths as needed for that device.

Emerson's Smart Wireless

Reliable wireless architecture

- Standard IEEE 802.15.4 radios
- 2.4 GHz ISM band sliced into 15 radio channels
- Time synchronized channel hopping to avoid interference from other radios, Wi-Fi, and EMC sources and increase reliability
- Direct sequence spread spectrum (DSSS) technology delivers high reliability in challenging radio environment

SmartPower™ solutions

- Optimized Emerson™ instrumentation, both hardware and software, to extend power module life
- Intrinsically safe power module allows field replacements without removing the transmitter from the process, keeping personnel safe, and reducing maintenance costs.

Specifications

Functional specifications

Discrete input

Single or dual SPST dry contacts, single SPDT dry contacts or leak detection. To maintain I.S. ratings, contacts must be limited to simple switches or leak detection only.

Switching threshold, measurement option code 32 and 42

Open > 100 K Ohm
Closed < 5 K Ohm

Momentary discrete input, measurement option code 32 and 42

Detects momentary discrete inputs of 10 millisecond or more duration. At each wireless update, device reports current discrete state and accumulating count of close-open cycles. Accumulating count registers from 0 to 999,999, then re-sets to zero.

Discrete output, measurement option Code 42

Maximum rating: 26 Vdc, 100 mA
On resistance: typical 1 Ohm

Wireless output

IEC 62591 (*Wireless*HART) 2.4 GHz DSSS

Radio frequency power output from antenna

External (WK option) antenna:
Maximum of 10 mW (10 dBm) EIRP

Extended range, external (WM option) antenna:
Maximum of 18 mW (12.5 dBm) EIRP

Remote (WJ option) antenna:
Maximum of 17 mW (12.3 dBm) EIRP

High-gain, remote (WN option) antenna:
Maximum of 40 mW (16 dBm) EIRP

Local display[1]

The optional integral LCD display can show discrete state and diagnostic information. Display updates at each wireless update.

1. The option for a local display is not available with option 61, Liquid hydrocarbon leak detection.

Humidity limits

0–100% relative humidity

Wireless update rate, measurement option code 32, 42

User selectable, 1 sec. to 60 min.

Wireless update rate, measurement option code 61

User selectable, 4 sec. to 60 min.

Physical specifications

Material selection

Emerson provides a variety of Rosemount products with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product materials, options, and components for the particular application. Emerson Process Management is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product options, configuration, or materials of construction selected.

Electrical connections

Wireless power module

Replaceable, Intrinsically Safe Lithium-Thionyl Chloride power module with PBT polymer enclosure. Ten year life at one minute update rate.[1]

1. Reference conditions are 70 °F (21 °C), and routing data for three additional network devices.

Note
Continuous exposure to ambient temperature limits -40 °F or 185 °F (-40 °C or 85 °C) may reduce specified power module life by less than 20 percent.

Switch terminals

Screw terminals permanently fixed to terminal block

Field Communicator connections

Communication Terminals

Clips permanently fixed to terminal block

Materials of construction

Enclosure

Housing: low-copper aluminum, or stainless steel
Paint: Polyurethane
Cover O-ring: Buna-N

Terminal Block and Power Module Pack

PBT

Antenna

PBT/PC integrated omni-directional antenna

Conduit entries

1/2–14 NPT

Weight

Low-copper aluminum:
702 without LCD - 4.6 lb (2.0 kg)
702 with M5 LCD - 4.7 lb (2.1 kg)

Stainless steel:
702 without LCD display - 8.0 lb (3.6 kg)
702 with M5 LCD display - 8.1 lb (3.7 kg

Enclosure ratings

NEMA® 4X and IP66/67

Mounting

Transmitters may be attached directly to switch, brackets also permit remote mounting. See "Dimensional Drawings" on page 17.

Performance specifications

Electromagnetic compatibility (EMC)

Meets all industrial environment requirements of EN61326 and NAMUR NE-21. Maximum deviation <1% span during EMC disturbance.(1)

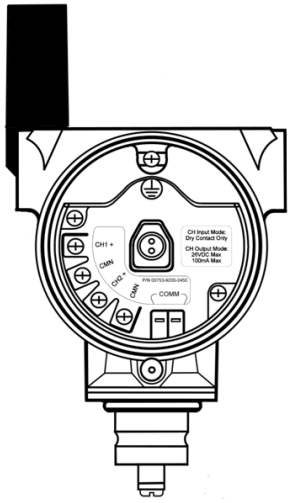
Vibration effect

Wireless output unaffected when tested per the requirements of IEC60770-1 field or pipeline with high vibration level (10–60 Hz 0.21mm displacement peak amplitude/60–2000 Hz 3g).

Wireless output unaffected when tested per the requirements of IEC60770-1 field with general application or pipeline with low vibration level (10–60 Hz 0.15mm displacement peak amplitude/60–500 Hz 2g).

Temperature limits

Description	Operating limit	Storage limit
Without LCD display	-40 to 185 °F -40 to 85 °C	-40 to 185 °F -40 to 85 °C
With LCD display	-4 to 175 °F -20 to 80 °C	-40 to 185 °F -40 to 85 °C



Dry contact switch inputs, measurement option code 32, and 42

Terminal block connections

The Rosemount 702 has a pair of screw terminals for each of two channels, and a pair of communication terminals. These terminals are labeled as follows:

CH1+: Channel one positive
CMN: Common
CH2+: Channel two positive
CMN: Common
COMM: Communication terminals

Figure 1. Terminal Block Connections

1. *During surge event device may exceed maximum EMC deviation limit or reset; however, device will self-recover and return to normal operation within specified start-up time.*

Wireless output specifications

Dry contact switch inputs, measurement option code 32, and 42

Single input or dual input independent

The Rosemount 702 will accept the input from one or two single pole single throw switches on inputs CH1 and CH2. The wireless output of the transmitter will be both a primary variable (PV) and a secondary variable (SV). The PV is determined by the CH1 input. The SV is determined by the CH2 input. A closed switch drives a TRUE output. An Open switch drives a FALSE output.

Note

Any dry contact input can be inverted by the device, so as to give the opposite effect. This is useful, for instance, if a normally open switch is used to replace a normally closed switch.

Figure 2. Single and Dual Input

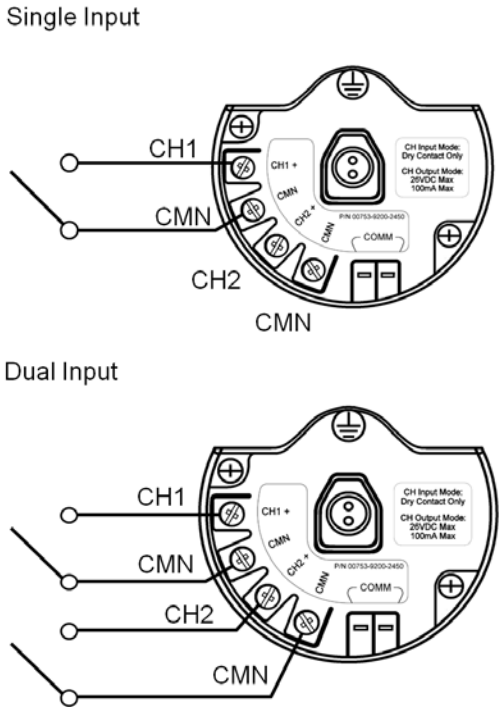


Table 3. Single or Dual Input, No Logic

Switch input	Wireless output	Switch input	Wireless output
CH1	**PV**	**CH2**	**SV**
Closed	TRUE (1.0)	Closed	TRUE (1.0)
Open	FALSE (0.0)	Open	FALSE (0.0)

Dual input, limit contact logic

When configured for Limit Contact Logic, the Rosemount 702 will accept the input from two single pole single throw switches on inputs CH1 and CH2, and will use limit contact logic for the determination of the wireless outputs.

Figure 3. Dual Input, Limit Contacts

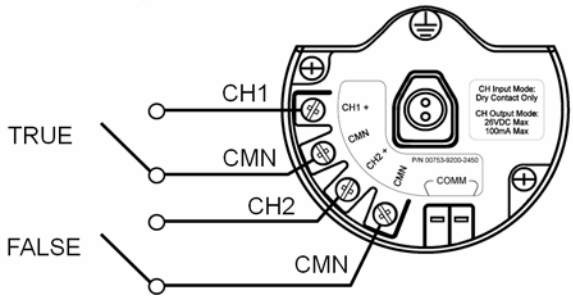

Table 4. Dual Input, Limit Contact Logic

Switch inputs		Wireless outputs	
CH1	**CH2**	**PV**	**SV**
Open	Open	TRAVEL (0.5)	TRAVEL (0.5)
Open	Closed	FALSE (0.0)	FALSE (0.0)
Closed	Open	TRUE (1.0)	TRUE (1.0)
Closed	Closed	FAULT(NaN)	FAULT(NaN)

Dual input, opposing contact logic

When configured for opposing contact logic, the Rosemount 702 will accept the input from a double pole single throw switch on inputs CH1 and CH2, and will use opposing contact logic for the determination of the wireless outputs.

Figure 4. Dual Input, Opposing Contact

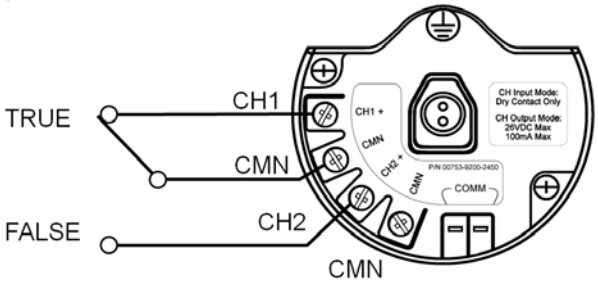

Table 5. Dual Input, Opposing Contact Logic

Switch inputs		Wireless outputs	
CH1	**CH2**	**PV**	**SV**
Open	Open	FAULT(NaN)	FAULT(NaN)
Open	Closed	FALSE (0.0)	FALSE (0.0)
Closed	Open	TRUE (1.0)	TRUE (1.0)
Closed	Closed	FAULT(NaN)	FAULT(NaN)

Momentary discrete inputs, measurement option code 32 and 42

The Rosemount 702 is capable of detecting momentary discrete inputs of 10 millisecond or more in duration, regardless of the wireless update rate. At each wireless update, the device reports current discrete state along with an accumulating count of close-open cycles for each input channel.

Figure 5. Momentary Inputs and Accumulating Count

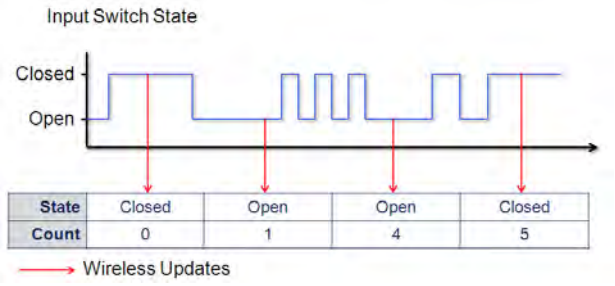

Figure 6. Reporting of Current Discrete State and Count in AMS™ Device Manager

Variable reporting and mapping

The Rosemount 702 will report variables exactly like the previous version of the device (measurement option code 22). In the Enhanced variable reporting mode, the transmitter will provide both current state of the discrete channels, and a count of the discrete state change cycles. Following is a table that shows the variable mapping for both cases. Variable Reporting can be set in AMS Device Manager by going to **Configure** > **Manual Setup** > **HART**.

Table 6. Variable Mapping

Variable reporting	Variable mapping			
	PV	**SV**	**TV**	**QV**
Enhanced – Discrete state with count	CH1 state	CH2 state	CH1 count	CH2 count

Discrete output circuits, measurement option code 42

The Rosemount 702 has two channels that can each be configured for discrete input or output. Inputs must be dry contact switch inputs and these were described in a preceding section of this document. Outputs are a simple switch closure to activate an output circuit. The transmitter output does not provide any voltage or current, the output circuit must have power of its own. The transmitter output has maximum switch capacity per channel of 26 volts DC and 100 milliamps. A typical power supply for powering an output circuit can be 24 volts or lower.

Note

It is very important that the polarity of the output circuit is as shown in the wiring diagrams, with the positive (+) side of the circuit wired to the CH1+ or the CH2 + terminal, and the negative (-) side of the circuit wired to the CMN terminal. If the output circuit is wired backwards, it will remain active (switch closed) regardless of the state of the output channel.

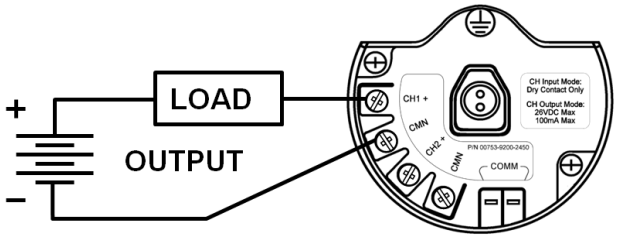
Discrete output switch functionality

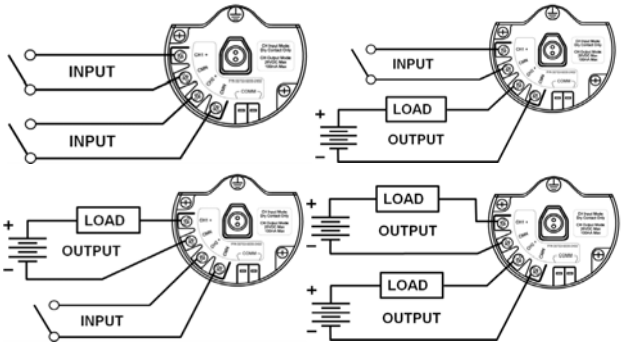
The discrete output of the Rosemount 702 is driven by the host control system, through the Smart Wireless Gateway, and out to the transmitter. The time required for this wireless communication from the Gateway to the transmitter is dependent on many factors, including the size and topology of the network and the total amount of downstream traffic on the wireless network. For a network that is constructed to our best practices, typical delays in communication of a discrete output from the Gateway to the Transmitter are 15 seconds or less. Remember that this delay is only part of the latency that well be observed in a control loop.

Note

The output switch functionality of the Rosemount 702 requires that the network is managed by a version 3 Smart Wireless Gateway with v3.9.7 firmware, or a version 4 Gateway with v4.3 or higher firmware installed.

Figure 7. Output Circuit Wiring





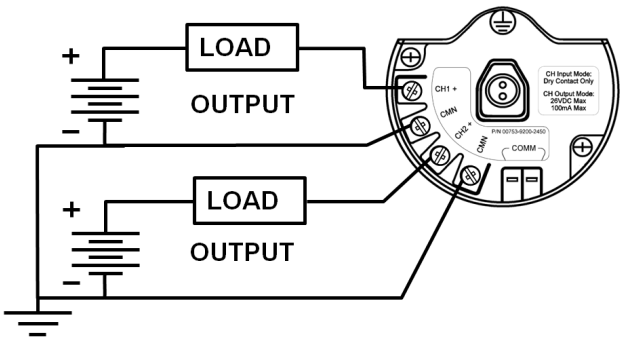


Figure 8. Possible Configurations for Both Channel 1 and Channel 2

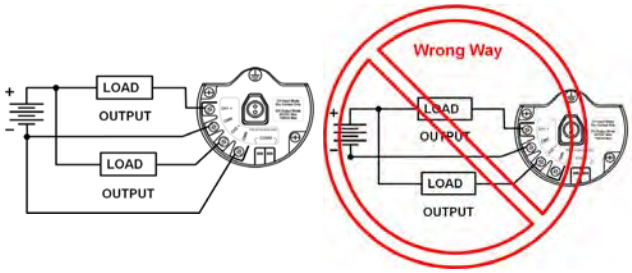
Special considerations for dual output circuits



If both channels are connected to output circuits, it is very important that the CMN terminal of each circuit be at the same voltage. Employing a common ground for both output circuits is one way to ensure that both circuits have CMN terminals at the same voltage.

Figure 9. Dual Output Circuits with a Common Ground

If two output circuits are connected to a single Rosemount 702 Transmitter with a single power supply, both CH + and CMN terminals must be connected to each output circuit. The negative power supply wires must be at the same voltage and connected to both CMN terminals.

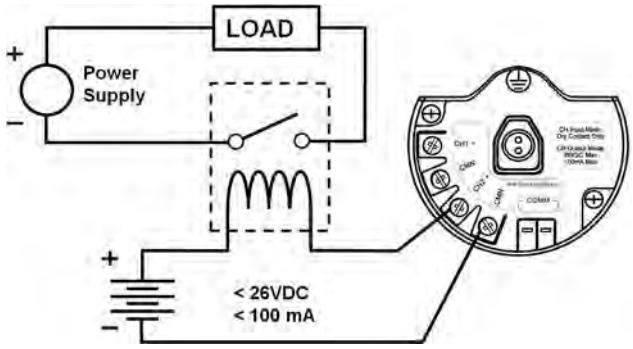


Figure 10. Dual Output Circuits with One Power Supply

Switching greater currents or voltages

It is important to note that the maximum output switching capacity is 26 volts DC and 100 milliamps. If a greater voltage or current is to be switched, an interposing relay circuit can be used. Figure 11 shows an example of a circuit to switch higher currents or voltages.

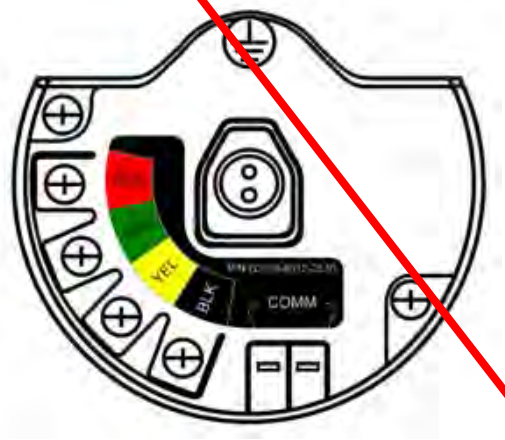
Figure 11. Wiring an Interposing Relay to Switch Greater Currents or Voltages

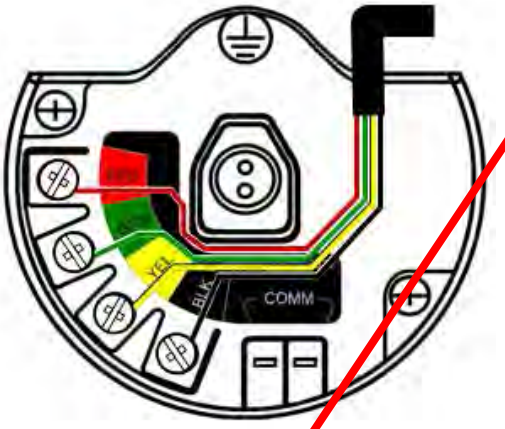
Leak sensors, liquid hydrocarbon detection, measurement option code 61

Terminal block connections

The liquid hydrocarbon detection configuration is intended for use with the Pentair TraceTek Fast Fuel Sensor, or TraceTek sensing cable.

Figure 12. Fuel Sensor Terminal Diagram





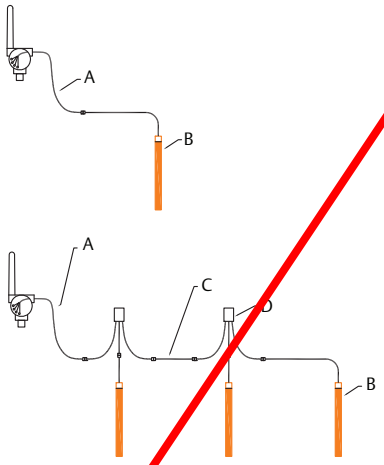


Figure 13. Fuel Sensor Connection Diagram

The connections to the Fast Fuel Sensor TraceTek sensing cable are made by matching the appropriately colored wires to the matching colored termination lugs.

- The Rosemount 702 can support up to three Fast Fuel sensors. These Fast Fuel sensors are connected using TraceTek Modular Leader Cable (TT-MLC-MC-BLK), optional modular jumper cables (TT-MJC-xx-MC-BLK) and branching connectors (TT-ZBC-MC-BLK) as suggested in Figure 14.

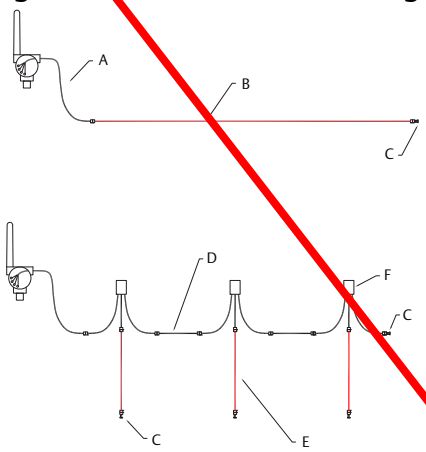

Figure 14. Fuel Sensor Wiring

A. TT-MLC-MC-BLK (Leader cable)
B. TT-FFS-100 or TT-FFS-250 (Fast fuel sensor probe)
C. TT-MJC-xx-MC-BLK (Optional jumper cable)
D. TT-ZBC-xx-MC-BLK (Branch connector)

- The Rosemount 702 can support up to 500 ft of TraceTek hydrocarbon or solvent sensor cable (TT5000 or TT5001 series). The total amount of sensor cable connected to a single transmitter is not to exceed 500 ft. However, leader cable, jumper cables (if used), and branch connectors are not included in the 500 ft (150 m) limit. See Figure 15 for typical configurations.

Figure 15. Fuel Sensor Cable Wiring

A. TT-MLC-MC-BLK (Leader cable)
B. TT5000/TT5000 Sensor cable (up to 500 ft)
C. TT-MET-MC (End termination)
D. TT-MJC-xx-MC-BLK (Optional jumper cable)
E. Up to 500 ft TT5000 or TT5001 sensor cable (Total per Rosemount 702)
F. TT-ZBC-xx-MC-BLK (Branch connector)

Safety Shower and Eye Wash Monitoring

The Rosemount 702 Transmitter can be used to monitor safety showers and eye wash stations by using switch kits provided by TopWorx™, an Emerson company. These kits are ordered as a part of the Rosemount 702 model code and are available for both insulated and un-insulated pipes. These kits contain the switches, brackets and cables that are necessary to install the transmitter to monitor both the safety shower and the eye wash in a single station. Because each has two input channels, one transmitter can be used to monitor both a safety shower and an eye wash.

Each safety shower monitoring kit contains:

- Two TopWorx GO™ Switch magnetic proximity switches
- Two cables, six-foot and 12-foot
- Two black polymer cable glands
- Mounting kit for safety shower and eye wash

UL and CSA switches

Safety shower and eye wash monitoring kits are available with either UL or CSA switches. This designation refers to the ordinary location certification of the GO Switch in the kit. These are not hazardous locations certificates. The Go Switch is regarded as a simple apparatus and does not require its own hazardous locations certificate. Either GO Switch is suitable for installation in hazardous locations when wired to the Rosemount 702 with an appropriate hazardous locations certificate. The CSA GO Switch is for applications in Canada, the UL GO Switch is for applications in all other world areas.

Installation drawings and instructions

Installation drawings and instructions for safety shower and eye wash kits are included in the Rosemount 702 Transmitter Reference Manual, Appendix D (document number 00809-0200-4702). This manual can be downloaded at the Rosemount 702 Transmitter product page: EmersonProcess.com/Rosemount-702-Discrete.

Safety shower monitoring

When the shower valve is activated (valve open) by pulling down on the handle, the TopWorx switch is activated (closed switch) and the Rosemount 702 senses that switch closure. This switch state is then transmitted by the transmitter to the Gateway, which then sends that information to the control host or alert system. When the shower valve is closed, the switch remains in the activated state until it is reset by a technician. The switch can be re-set only by placing a ferrous metal object on the far side of the sensing area of the switch.

Figure 16. TopWorx Switch Installed on Safety Shower

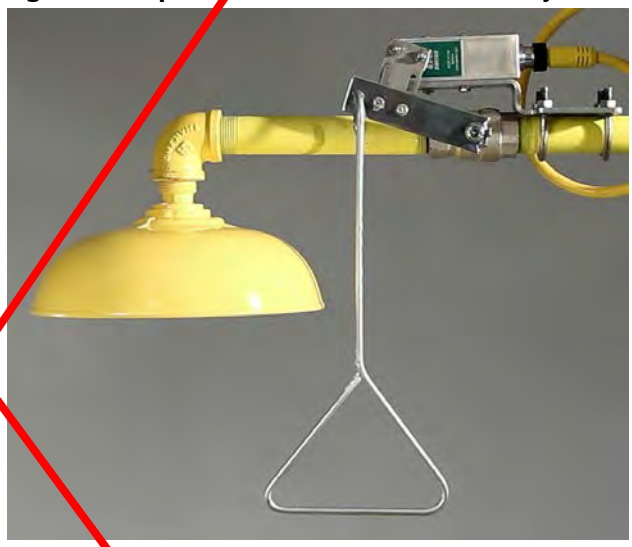

Figure 17. Detail of Switch Installation on Safety Shower

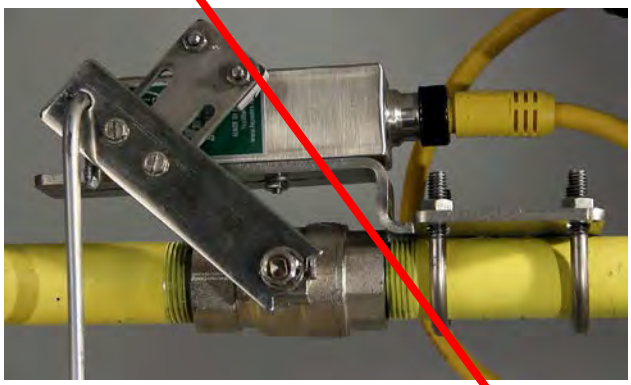

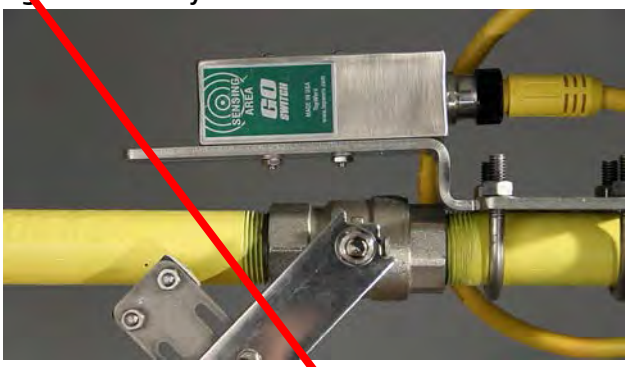

Figure 18. Safety Shower Valve in Activated Position

Eye wash monitoring

When the eye wash valve is activated (valve open) by pushing down on the hand paddle, the TopWorx switch is activated (closed switch) and the Rosemount 702 senses that switch closure. This switch state is then transmitted by the transmitter to the Gateway, which then sends that information to the control host or alert system. When the eye wash valve is closed, the switch remains in the activated state until it is reset by a technician. The switch can be re-set only by placing a ferrous metal object on the far side of the sensing area of the switch.

Product Certifications

Rev 1.0

European Union Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at EmersonProcess.com/Rosemount.

Telecommunication Compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This device may not cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Ordinary Location Certification for FM Approvals

As standard, the transmitter has been examined and tested to determine that the design meets basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized testing laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

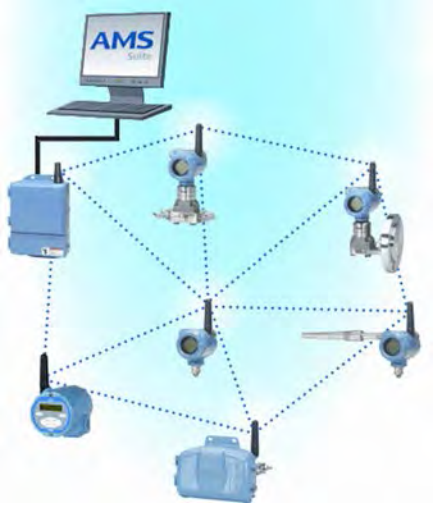
Rosemount™ 248 Wireless Temperature Transmitter

- Standard temperature transmitter offers a wireless solution for process monitoring
- Optimize plant efficiency and increase measurement reliability with industry-proven capabilities and specifications
- Emerson™ Smart Wireless delivers innovative wireless solutions for temperature measurement and overall transmitter performance
- Explore the benefits of Complete Point Solutions™ from Rosemount Temperature

EMERSON
Process Management



Rosemount 248 Wireless Temperature Transmitter

Standard temperature transmitter offers a cost effective solution for wireless process monitoring

- Single sensor capability with universal sensor inputs (RTD, T/C, mV, ohms)
- IEC-approved *Wireless*HART® protocol
- Large LCD display (only available with enclosure option code P)

Optimize plant efficiency and increase measurement reliability with industry-proven capabilities and specifications

- One-year stability rating reduces maintenance costs
- User-centric device dashboards communicate important diagnostics and ensure process health
- Open/short sensor diagnostics assist with detecting issues in the sensor loop
- Compensation for ambient temperatures enhances transmitter performance
- Four user-configurable alerts provide increased process information and measurement point insight (only available with enclosure option code P)

Smart Wireless delivers innovative wireless solutions for temperature measurement and overall transmitter performance

- Self-organizing network delivers information rich data with >99% data reliability and establishes a highly stable network
- Smart Wireless capabilities extend the full benefits of PlantWeb™ to previously inaccessible temperature measurement locations
- Emerson SmartPower™ solutions provide an intrinsically safe Power Module, allowing field replacements without removing the transmitter from the process, keeping personnel safe and reducing maintenance costs
- Emerson Process Management's layered approach to wireless network security ensures that data transmissions are secure

Explore the benefits of a Complete Point Solution from Rosemount Temperature Measurement

- An “Assemble To Sensor” option enables Emerson to provide a complete point temperature solution, delivering an installation-ready transmitter and sensor assembly
- Emerson offers a selection of RTDs, thermocouples, and thermowells that bring superior durability and Rosemount reliability to temperature sensing, complementing the Rosemount transmitter portfolio

Experience global consistency and local support from numerous worldwide Rosemount Temperature manufacturing sites

- World-class manufacturing provides globally consistent product from every factory and the capacity to fulfill the needs of any project, large or small
- Experienced Instrumentation Consultants help select the right product for any temperature application and advise on best installation practices
- An extensive global network of Emerson service and support personnel can be on-site when and where they are needed

- Make wireless installation and configuration easy with the **Emerson Smart Wireless Gateway**.
- For wireless applications that require superior accuracy, consider the **Rosemount 648 Wireless** Temperature Transmitter.
- Explore how Emerson's intrinsically safe **SmartPower Solutions** reduce maintenance costs.

Ordering Information

The Rosemount 248 Wireless Temperature Transmitter has a rugged wireless transmitter design and industry-proven capabilities and specifications.

Transmitter features include:

- IEC-approved *Wireless*HART protocol (option code WA3)
- Large LCD display (option code M5)
- Internal antenna (option code WP5)
- 3-point calibration certificate (option code Q4)
- Assemble to Sensor options (option code XA)

Table 1. Rosemount 248 Wireless Temperature Transmitter Ordering Information

★ The Standard offering represents the most common options. The starred options (★) should be selected for best delivery. The Expanded offering is subject to additional delivery lead time.

Code	Product description			
248	Temperature transmitter			
Transmitter type				
D	Wireless field mount			★
Transmitter output				
X	Wireless			★
Product certifications				
NA	No Approval			★
I5	USA Intrinsically Safe and Non-incendive			★
N5[1]	USA Nonincendive and Dust-Ignitionproof			★
I6	Canada Intrinsically Safe			★
I1	ATEX Intrinsic Safety			★
I7	IECEx Intrinsic Safety			★

★ **The Standard offering represents the most common options. The starred options (★) should be selected for best delivery. The Expanded offering is subject to additional delivery lead time.**

Options (include with selected model number)

Assemble to options		
NS	No sensor	★
XA[3]	Sensor specified separately and assembled to transmitter	★
Wireless update rate, operating frequency, and protocol		
WA3	User configurable update rate, 2.4GHz DSSS, *Wireless*HART	★
Omnidirectional wireless antenna and SmartPower		
WP5[2][4]	Internal antenna, compatible with green power module (I.S. power module sold separately)	★
WK1[1][5]	External antenna, adapter for black power module (I.S. power module sold separately)	★
Mounting bracket		
B5	Universal “L” mounting bracket for 2-in. pipe mounting – SST bracket and bolts	★
Display[2]		
M5	LCD display	★
Cable gland option		
G2	Cable gland (7.5 mm to 11.9 mm)	★
G4	Thin wire cable gland (3 mm to 8 mm)	★
5-point calibration[1]		
C4	5-point calibration (Requires the Q4 option code to generate a calibration certificate)	★
Calibration certificate		
Q4	Calibration certificate (3-point calibration)	★
External ground[1]		
G1	External ground lug assembly	★
Line filter		
F5	50 Hz line voltage filter	★
F6	60 Hz line voltage filter	★
Software configuration		
C1	Custom configuration of date, descriptor, message, and wireless parameters (Requires CDS with order)	★
Extended product warranty		
WR3	3-year limited warranty	★
WR5	5-year limited warranty	★
Typical model number: 248 D X NA P 2 NS WA3 WP5 B5 M5 F6 WR3		

1. Only available with enclosure option code D.
2. Only available with enclosure option code P.
3. When ordering a Rosemount 248 Wireless with the XA option, a mounting bracket is not included. If a bracket is required, order option code B5.
4. Green power module must be shipped separately, order Model 701PGNKF.
5. Black power module must be shipped separately, order Model 701PBKKF.

Specifications

Functional specifications

Input

Supports Thermocouple, RTD, millivolt, and ohm input types. See "Accuracy" on page 9 for a full listing of sensor options.

Output

IEC 62591 *(Wireless*HART), 2.4 GHz DSSS

Local display[1]

The optional five digit integral LCD display can display sensor temperature in engineering units (°F, °C, °R, K, Ω, and millivolts) and percent of range. The display updates based in the wireless update rate.

Humidity limits

0–99% non-condensing relative humidity

Update rate

*Wireless*HART, user-selectable 1 second to 60 minutes

Accuracy (Pt 100 @ reference condition: 20 °C)

±0.81 °F (±0.45 °C)

Wireless radio (WP5 and WK1 options)

Frequency: 2,400–2,485 GHz
Channels: 15
Modulation: IEEE 802.15.4 compliant DSSS

Physical specifications

Material selection

Emerson provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson Process Management is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Conformance to specifications (±3σ [Sigma])

Technology leadership, advanced manufacturing techniques, and statistical process control ensure specification conformance to at least ±3σ.

Electrical connections

Power module

The Emerson SmartPower power module is field replaceable, featuring keyed connections that eliminate the risk of incorrect installation.

The power module is an Intrinsically Safe solution, containing Lithium-thionyl chloride with a polybutadine terephthalate (PBT) enclosure.

The Rosemount 248 Wireless has a power module life time rating of 10 years with a one minute update rate at reference conditions.[2]

Sensor terminals

Sensor terminals permanently fixed to terminal block

1. *Only available with enclosure option code P.*
2. *Reference conditions are 70 °F (21 °C), and routing data for three additional network devices.*

   Note: Continuous exposure to ambient temperature limits –40 °F or 185 °F (–40 °C or 85 °C) may reduce specified life by less than 20 percent.

Field Communicator connections

Communication terminals

HART® interface connections fixed to the power module (polymer housing)

Clips permanently fixed to terminal block, designated by the text “COMM” (aluminum housing)

Materials of construction

Enclosure

Housing: PBT/PC or low-copper aluminum with NEMA® 4X and IP66/67
Paint: Polyurethane (aluminum housing)
Cover O-ring: Silicone (polymer housing), Buna-N (aluminum housing)
Conduit entry: 316 SST (polymer housing)

Antenna

PBT/PC integrated omni-directional antenna (aluminum housing)

Mounting

Transmitters may be attached directly to the sensor. Mounting brackets also permit remote mounting. See “Dimensional Drawings” on page 15.

Weight

Engineered polymer

248 without LCD display: 0.99 lb (0,45 kg)
248 with LCD display: 1.11 lb (0,51 kg)

Aluminum

3.03 lb (1,38 kg)

Enclosure ratings

Type 4X and IP66/67

Performance specifications

Electromagnetic Compatibility (EMC)

Meets all relevant requirements of IEC 61326

Transmitter measurement stability

±0.15% of output reading or 0.15 °C (whichever is greater) for 12 months

Self calibration

The analog-to-digital measurement circuitry automatically self-calibrates for each temperature update by comparing the dynamic measurement to extremely stable and accurate internal reference elements.

Vibration effect

The Rosemount 248 Wireless (direct and remote mounted with enclosure option code D and direct mounted with enclosure option code P) are tested to the following specifications with no effect on performance per IEC 60770-1, 1999:

Frequency	Acceleration
10–60 Hz	0.21 mm peak displacement
60–2000 Hz	3 g

The Rosemount 248 Wireless (remote mounted with enclosure option code P) is tested to the following specifications with no effect on performance per IEC 60770-1, 1999:

Frequency	Acceleration
10–60 Hz	0.15 mm peak displacement
60–500 Hz	2 g

Sensor connections

Figure 1. Rosemount 248 Wireless Sensor Terminal Block (Polymer Housing)

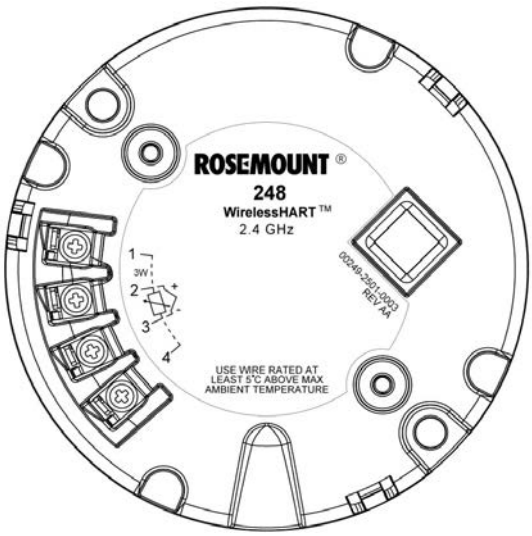

Figure 2. Rosemount 248 Wireless Sensor Terminal Block (Aluminum Housing)

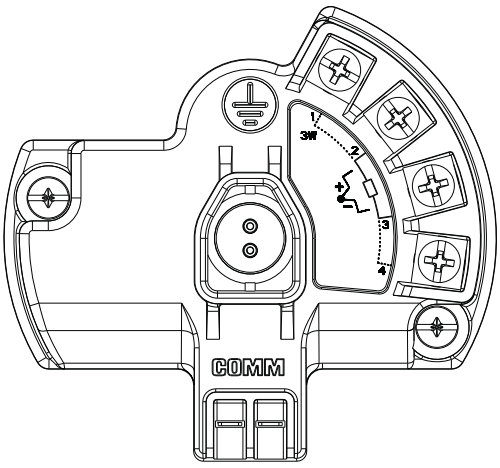

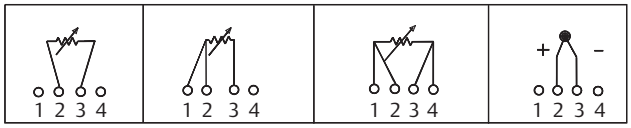

Figure 3. 248 Wireless Sensor Connection

2-wire RTD and Ω(1) | 3-wire RTD and Ω(1) | 4-wire RTD and Ω | T/C and mV

1. Emerson Process Management provides 4-wire sensors for all single element RTDs. You can use these RTDs in 3-wire or 2-wire configurations by leaving the unneeded leads disconnected and insulated with electrical tape.

Temperature limits

Operating limit	Storage limit
–40 to 185 °F (–40 to 85 °C)	–40 to 185 °F (–40 to 85 °C)

Accuracy

2-, 3-, 4-wire ohm		0 to 2000 W	0.0252 W	Entire sensor input range

1. Change in ambient is with reference to the calibration temperature of the transmitter 68 °F (20 °C) from factory.
2. Ambient temperature effect specification valid over minimum temperature span of 50 °F (28 °C).

Transmitters can be installed in locations where the ambient temperature is between –40 and 185 °F (–40 and 85 °C). In order to maintain excellent accuracy performance, each transmitter is individually characterized over this ambient temperature range at the factory.

Temperature effects example

When using a Pt 100 (α = 0.00385) sensor input at 30 °C ambient temperature:

- Digital temperature effects: 0.009 °C × (30 – 20) = 0.09 °C
- Worst case error: Digital + Digital temperature effects = 0.45 °C + 0.09 °C = 0.54 °C
- Total probable error: $\sqrt{0.45^2 + 0.09^2} = 0.459$ °C

Rev 1.5

European Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at EmersonProcess.com/Rosemount.

Ordinary Location Certification

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Telecommunication Compliance

All wireless devices require certification to ensure that they adhere to regulations regarding the use of the RF spectrum. Nearly every country requires this type of product certification. Emerson is working with governmental agencies around the world to supply fully compliant products and remove the risk of violating country directives or laws governing wireless device usage.

FCC and IC

This device complies with Part 15 of the FCC Rules. Operation is subject to the following conditions: This devices may not cause harmful interference, this devices must accept any interference received, including interference that may cause undesired operation. This device must be installed to ensure a minimum antenna separation distance of 20 cm from all persons.

Installing Equipment in North America

The US National Electrical Code® (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

USA

I5 USA Intrinsically Safe
Certificate: 70008071 (Polymer housing)
Standards: FM 3600:2011; FM 3610:2010; FM 3611:2004; UL 61010-1:2012; UL 50E:2012; ANSI/IEC 60529:2004
Markings: Intrinsically Safe: CL I, DIV 1, GP A, B, C, D; CL I, DIV 2, GP A, B, C, D; Class I, Zone 0, AEx ia IIC T4/T5 Ga; T4(–50 °C ≤ T_a ≤ +70 °C); T5(–50 °C ≤ T_a ≤ +40 °C); when installed per Rosemount drawing 00249-2020; Type 4X, IP66/67
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Special Condition for Safe Use (X):

1. Battery Exchange: The battery module can be change inside hazardous gas-explosive locations. During battery change it must be assured that the connections are free from dust or dirt.

I5 USA Intrinsically Safe
Certificate: 3039717 (Aluminum housing)
Standards: FM Class 3600:1998; FM Class 3610:2010; FM Class 3611:2004; FM Class 3810:2005; ANSI/NEMA 250:2003; ANSI/IEC 60529:2004
Markings: IS CL I/II/III, DIV 1, GP A, B, C, D, E, F, G; IS CL I, Zone 0, AEx ia IIC; NI CL I, DIV 2, GP A, B, C, D; T4(–50 °C ≤ T_a ≤ +70 °C), T5(–50 °C ≤ T_a ≤ +40 °C) when installed per Rosemount drawing 00249-1000; Type 4X; IP66/67
See Table 4 at the end of the Product Certifications section for Entity Parameters.

N5 USA Nonincendive and Dust-Ignitionproof
Certificate: 3039717 (Aluminum housing)
Standards: FM Class 3600:1998; FM Class 3611:2004; FM Class 3810:2005; ANSI/NEMA 250: 2003; ANSI/IEC 60529: 2004
Markings: NI CL I, DIV 2, GP A, B, C, D; T4(–50 °C ≤ T_a ≤ +70 °C); DIP CL II/III, DIV 1, GP E, F, G; –50 °C ≤ T_a ≤ +85 °C; when installed per Rosemount drawing 00249-1000; Type 4X; IP66/67

Canada

I6 Canada Intrinsically Safe
Certificate: 70008071(Polymer housing)
Standards: CSA C22.2 No. 0-10;
CSA C22.2 No. 94.2-07 (R2012);
CSA C22.2 No. 213-M1987 (R2013);
CAN/CSA-60079-0-11;
CAN/CSA-60079-11-14;
CAN/CSA C22.2 No. 60529-05;
CAN/CSA-C22.2 No. 61010-1-12
Markings: Intrinsically Safe: CL I, DIV 1, GP A, B, C, D;
CL I, DIV 2, GP A, B, C, D; Ex ia IIC T4/T5 Ga;
T4(–50 °C ≤ T_a ≤ +70 °C);
T5(–50 °C ≤ T_a ≤ +40 °C) when installed per Rosemount drawing 00249-2020; Type 4X, IP66/67
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Special Condition for Safe Use (X):

1. Battery Exchange: The battery module can be change inside hazardous gas-explosive locations. During battery change it must be assured that the connections are free from dust or dirt.

I6 Canada Intrinsically Safe
Certificate: 1091070 (Aluminum housing)
Standards: CAN/CSA C22.2 No. 0-10;
CSA Std. C22.2 No. 25-1966;
CAN/CSA C22.2 No. 94-M91;
CAN/CSA C22.2 No. 157-92;
CSA C22.2 No. 213-M1987;
C22.2 No. 60529-05;
CSA Std. C22.2 No. 142-M1987
Markings: Intrinsically Safe: CL I, DIV 1 GP A, B, C, D;
Suitable for use in CL I DIV 2 GP A, B, C, D; T3C;
when installed per Rosemount drawing 00249-1020; Type 4X, IP66/67
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Europe

I1 ATEX Intrinsic Safety
Certificate: Baseefa14ATEX0359X (Polymer housing)
Standards: EN 60079-0:2012; EN 60079-11:2012
Markings:  II 1 G Ex ia IIC T4/T5 Ga;
T4(–60 °C ≤ T_a ≤ +70 °C);
T5(–60 °C ≤ T_a ≤ +40 °C)
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Special Condition for Safe Use (X):

1. The plastic enclosure may present a potential electrostatic ignition hazard and must not be rubbed or cleaned with a dry cloth.

I1 ATEX Intrinsic Safety
Certificate: Baseefa10ATEX0121X (Aluminum housing)
Standards: EN 60079-0:2009; EN 60079-11:2007
Markings: II 1 G Ex ia IIC T4/T5 Ga,
T4(–60 °C ≤ T_a ≤ +70 °C),
T5(–60 °C ≤ T_a ≤ +40 °C);
See Table 4 at the end of the Product Certifications section for Entity Parameters

Special Conditions for Safe Use (X):

1. The plastic antenna may present a potential electrostatic ignition hazard and must not be rubbed or cleaned with a dry cloth.
2. The Rosemount 248 enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in a Zone 0 area.

International

I7 IECEx Intrinsic Safety
Certificate: IECEx BAS 14.0158X (Polymer housing)
Standards: IEC 60079-0:2011; IEC 60079-11:2011
Markings: Ex ia IIC T4/T5 Ga, T4(–60 °C ≤ T_a ≤ +70 °C), T5(–60 °C ≤ T_a ≤ +40 °C);
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Special Condition for Safe Use (X):

1. The plastic enclosure may present a potential electrostatic ignition hazard and must not be rubbed or cleaned with a dry cloth.

I7 IECEx Intrinsic Safety
Certificate: IECEx BAS 10.0059X (Aluminum housing)
Standards: IEC 60079-0:2011; IEC 60079-11:2011
Markings: Ex ia IIC T4/T5 Ga, T4(–60 °C ≤ T_a ≤ +70 °C), T5(–60 °C ≤ T_a ≤ +40 °C);
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Special Conditions for Safe Use (X):

1. The surface resistivity of the antenna is greater than 1GΩ. To avoid electrostatic charge build-up, it must not be rubbed or cleaned with solvents or a dry cloth.
2. The Rosemount 701PBKKF Power Module and Intelligent Power Module 71008 may be replaced in a hazardous area. The Power Modules have a surface resistivity greater than 1GΩ and must be properly installed in the wireless device enclosure. Care must be taken during transportation to and from the point of installation to prevent electrostatic charge build-up.
3. The Rosemount 248 enclosure may be made of aluminum alloy and given a protective polyurethane paint finish; however, care should be taken to protect it from impact or abrasion if located in a Zone 0 area.

Brazil

I2 INMETRO Intrinsic Safety
Certificate: UL-BR 15.0222X (Polymer housing)
Standards: ABNT NBR IEC 60079-0: 2008 + Corrigendum 1:2011; ABNT NBR IEC 60079-11:2009
Markings: Ex ia IIC T4/T5 Ga; T4 (–60 °C ≤ T_a ≤ +70 °C); T5 (–60 °C ≤ T_a ≤ +40 °C)
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Special Condition for Safe Use (X):

1. The plastic enclosure may present a potential electrostatic ignition hazard and must not be rubbed or cleaned with a dry cloth.

China

I3 NEPSI Intrinsic Safety
Certificate: GYJ15.1143X (Polymer housing)
Standards: GB3836.1-2010, GB3836.4-2010, GB3836.20-2010
Markings: Ex ia IIC T4/T5 Ga; T4 (–60 °C ≤ T_a ≤ +70 °C); T5 (–60 °C ≤ T_a ≤ +40 °C)
See Table 4 at the end of the Product Certifications section for Entity Parameters.

Special Conditions for Safe Use (X):

1. Non-metallic parts incorporated in the enclosure of the product shall only be cleaned with a damp cloth to avoid electrostatic charge.
2. Must use Rosemount 701PGNKF SmartPower Green Power Module provided by the manufacture.

Japan

I4 TIIS Intrinsic Safety
Certificate: TC21031 (Polymer housing)
Markings: Ex ia IIC T4 X (–20 °C ~ +60 °C)
See Table 4 at the end of the Product Certifications section for Entity Parameters.

EAC

IM Technical Regulation Customs Union (EAC) Intrinsic Safety
Certificate: TC RU C-US.AA87.B.00057
Markings: 0Ex ia IIC T4, T5 Ga X, T5(–60 °C ≤ T_a ≤ +40 °C), T4(–60 °C ≤ T_a ≤ +70 °C); IP66/IP67

Special Condition for Safe Use (X):

1. See certificate for special conditions.

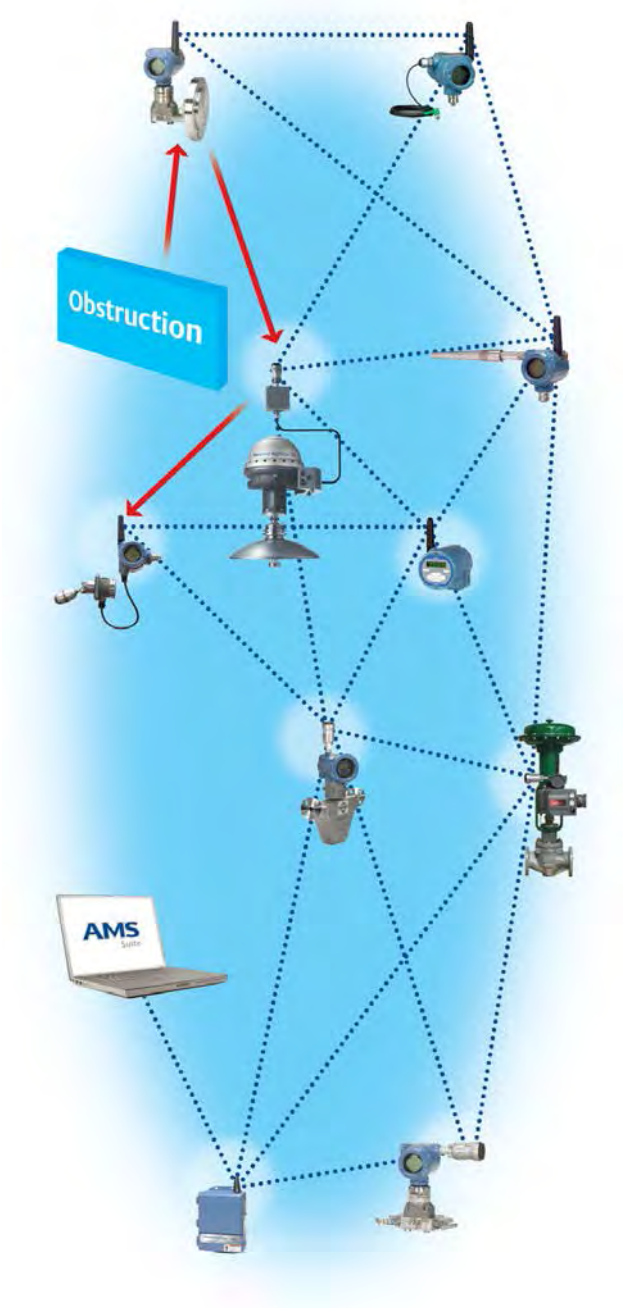
SmartPower™ Solutions

IEC

WirelessHART CE

- Intrinsically Safe design enables ability to perform routine maintenance in hazardous areas
- Predictable life specified under installed conditions
- Robust design for use in harsh environments
- Low Level alerts for easy maintenance
- Keyed connection for easy and fail-safe replacement



ROSEMOUNT

EMERSON.
Process Management

IEC 62591 (*Wireless*HART™)... the Industry Standard

Self-organizing, adaptive mesh routing

- No wireless expertise required, devices automatically find the best communication paths
- Network continuously monitors paths for degradation and repairs itself
- Adaptive behavior provides reliable, hands-off operation and simplifies network deployments, expansion, and reconfiguration
- Supports both star and mesh topologies

Industry standard radio with channel hopping

- Standard IEEE 802.15.4 radios
- 2.4 GHz ISM band sliced into 16 radio-channels
- Continually "hop" across channels to avoid interference and increase reliability
- Direct Sequence Spread Spectrum (DSSS) technology delivers high reliability in challenging radio environment

Self-healing network

- The self-organizing, self-healing network manages multiple communication paths for any given device. If an obstruction is introduced into the network, data will continue to flow because the device already has other established paths. The network will then lay in more communication paths as needed for that device.

Seamless integration to existing hosts

- Transparent and seamless integration
- Same control system applications
- Gateways connect using industry protocols

SmartPower Solutions

Black power module

For 702 Wireless Discrete Transmitter

- Hazardous Area Certifications: FM, CSA, ATEX, IECEx
- Designed for use with:

  Rosemount 702 Wireless Discrete Transmitter
  Rosemount 3051S Wireless Pressure Transmitter
  Rosemount 648 Wireless Temperature Transmitter
  Rosemount 848T Wireless Temperature Transmitter
  Rosemount 248 Wireless Temperature Transmitter
  CSI 9420 Wireless Vibration Transmitter
  Rosemount Analytical 6081 Wireless Transmitter for pH andConductivity
  Rosemount 2160 Wireless Vibrating Fork Liquid Level Switch
  Rosemount 3308 Wireless Guided Wave Radar Level and Interface Transmitter

Green power module

For 248 Wireless Temp Transmitter

- Hazardous Area Certifications: FM, CSA, ATEX, IECEx
- Designed for use with:

  Rosemount 708 Wireless Acoustic Transmitter
  Rosemount 3051 Wireless Pressure Transmitter
  Rosemount 2051 Wireless Pressure Transmitter

Intrinsically safe power solution

- SmartPower Modules can be changed in hazardous areas
- No need to remove transmitter from process to change power module

Predictable life

- Life expectancies specified under installed conditions
- Up to 10 year life depending on update rate

Easy maintenance

- Low level alerts for easy planning of replacements
- Keyed connections for easy replacement and fail-safe connection

Safe robust design

- Short circuit protection
- No special training required
- Designed for harsh environments

Ordering Information

Specification and selection of product materials, options, or components must be made by the purchaser of the equipment. See page 5 for more information on material selection.

Table 1. SmartPower Solutions Ordering Information

★ The Standard offering represents the most common options. The starred options (★) should be selected for best delivery.
The Expanded offering is subject to additional delivery lead time.

Model	Product description	
701P	SmartPower Options	
SmartPower type		
BK	Black Power Module	★
GN	Green Power Module	★
Certification		
KF	FM, CSA, ATEX, and IECEx Intrinsically Safe	★
Typical model number: 701PBKKF		

Specifications

Functional specifications

Life expectancy

Up to 10-year life at 1 minute update rate. See Table on page 5 for more information.

Humidity limits

0–100% relative humidity

Physical specifications

Material selection

Emerson provides a variety of Rosemount product with various product options and configurations including materials of construction that can be expected to perform well in a wide range of applications. The Rosemount product information presented is intended as a guide for the purchaser to make an appropriate selection for the application. It is the purchaser's sole responsibility to make a careful analysis of all process parameters (such as all chemical components, temperature, pressure, flow rate, abrasives, contaminants, etc.), when specifying product, materials, options and components for the particular application. Emerson Process Management is not in a position to evaluate or guarantee the compatibility of the process fluid or other process parameters with the product, options, configuration or materials of construction selected.

Electrical connections

Emerson SmartPower solutions were designed for use with various Smart Wireless devices.
The black power module is used with the 3051S, 648, 848, 702, 2160, 9420, and 6081.
The green power module is used with the 708, 3051C, and 2051.

Rated voltage

Black Power Module: 7.2 V
Green Power Module: 3.6 V

Materials of construction

Lithium-thionyl chloride with a polybutylene terephthalate (PBT) enclosure.

Weight

Black Power Module -0.50 lb. (230 g)
Green Power Module - 0.34 lb. (155 g)

Performance specifications

Electromagnetic compatibility (EMC)

All Models:
Meets all relevant requirements of EN 61326-1; 2006; EN 61326-2-3; 2006.

Vibration effect

No effect when tested per the requirements of IEC60770-1: High Vibration Level - field or pipeline (10-60 Hz 0.21 mm displacement peak amplitude / 60-2000 Hz 3g).

Temperature limits

Operating limit	Storage limit
–40 to 185 °F –40 to 85 °C	–40 to 185 °F –40 to 85 °C

Power module life

Power module life in a given wireless transmitter is mainly a function of the wireless update rate. Faster wireless updates lead to lower power module life. Power module life is also impacted by extreme temperature service and wireless network conditions.

Table 2. Power Module Life Estimates

Power module life estimates in years							
Update	4 sec	16 sec	60 sec	300 sec	20 min	40 min	60 min

for an on-line power module life estimator.

Product Certifications – 701P SmartPower Solutions

European Directive Information

A copy of the EC Declaration of Conformity can be found at the end of the Quick Start Guide. The most recent revision of the EC Declaration of Conformity can be found at www.rosemount.com.

Ordinary Location Certification for FM Approvals

As standard, the transmitter has been examined and tested to determine that the design meets the basic electrical, mechanical, and fire protection requirements by FM Approvals, a nationally recognized test laboratory (NRTL) as accredited by the Federal Occupational Safety and Health Administration (OSHA).

Installing in North America

The US National Electrical Code (NEC) and the Canadian Electrical Code (CEC) permit the use of Division marked equipment in Zones and Zone marked equipment in Divisions. The markings must be suitable for the area classification, gas, and temperature class. This information is clearly defined in the respective codes.

USA

KF FM Intrinsic Safety (IS)
Certificate: 3042016
Standards: FM Class 3600 – 1998, FM Class 3610 – 2010, FM Class 3810 – 2005
Markings: IIS CL I, DIV 1, GP 1, B, C, D; CL II, DIV 1, GP E, F, G; Class III; Class 1, Zone 0 AEx ia IIC T4; NI CL I, DIV 2, GP A, B, C, D T4; (-40 °C ≤ T_a ≤ +70 °C)
(See Table 3 or Table 4 for parameters)

Special Condition for Safe Use (X):

1. Replacement of power module, see instructions for final product.

Canada

KF CSA Intrinsically Safe
Certificate: 2430393
Standards: CAN/CSA C22.2 No. 0-M91, CSA Std C22.2 No. 157-92
Markings: Intrinsically Safe Class I, Division 1, Groups A, B, C, and D T3C (Ta ≤ +70 °C) Warning – refer to | QSG 825-0100-4701 for Safe I.S. Use
(See Table 3 or Table 4 for parameters)

Specific Condition for Safe Use (X):

1. The power modules are certified as components for use in intrinsically safe products where the suitability/ combination of use in the final assembly shall be subjected to CSA acceptance. The final assembly must incorporate all protection features necessary for batteries in accordance with applicable standards of the final intrinsically safe application.

Europe

KF ATEX Intrinsic Safety
Certificate: Baseefa11ATEX0042X
Standards: EN 60079-0: 2012, EN 60079-11: 2012
Markings: Ex II 1G Ex ia IIC T4 Ga, T4(-60 °C ≤ Ta ≤ +70 °C)
Ex II 1G Ex ia IIC T5 Ga, T5(-55 °C ≤ Ta ≤ +40 °C)
(See Table 3 or Table 4 for parameters)

Special Condition for Safe Use (X):

1. The plastic enclosure of the Model 701P SmartPower Power Modules may constitute a potential electrostatic ignition risk and caution should be used when being handled.

Note
This condition of use does not apply after a Power Module is installed within a wireless transmitter enclosure.

International

KF IECEx Intrinsic Safety
Certificate: IECEx BAS 11.0026X
Standards: IEC 60079-0: 2011, IEC 60079-11: 2011
Markings: Ex ia IIC T4/T5 Ga T4(-40 °C ≤ Ta ≤ +70 °C), T5(-40 °C ≤ Ta ≤ +40 °C)

Special Condition for Safe Use (X):

1. The plastic enclosure of the Model 701P SmartPower Power Modules may constitute a potential electrostatic ignition risk and caution should be used when being handled.

Note
This condition of use does not apply after a Power Module is installed within a wireless transmitter enclosure.

APPENDIX T10

Leak Detection Sensor

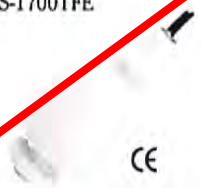
- Our wall mount level switch will provide leak detection for your tank containments or high level alarming with one of ours or your controls.
- Optional mounting brackets are available upon request.
- Custom lengths are available.
- Wetted material CPVC, ~~TEFLON or PVDF (Kynar), TEFLON~~.
- Also available with tank adapter to install on top of tank for high high alarm.

Large Size – Engineered Plastics

Select from these Engineered Plastics for Aggressive or Ultra-Pure Liquids

Each of these series offers unique features. Choose from this selection when all-plastic material is desirable and tank space is not restricted.

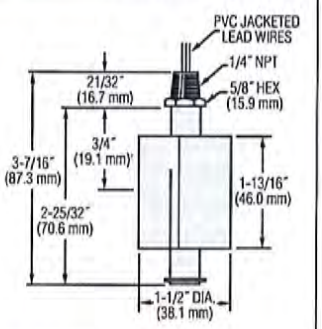
LS-74780 – All CPVC



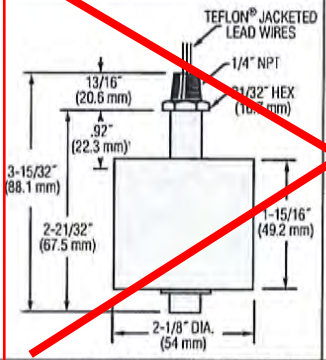
Particularly well suited for rough service. Ideal for use in chemical and plating applications.

LS-1900TFE

Resists build-up of foreign material or sticky media. Float travel remains uninhibited in viscous or corrosive liquids. SPDT switch.

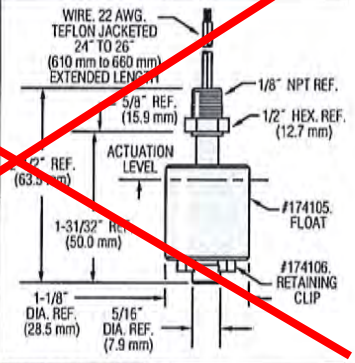


LS-1700TFE



A medium-size solution for ultra-pure liquid level sensing. Made of corrosion resistant PTFE for low particle generation.

Dimensions



LS-74780

LS-1900TFE

LS-1700TFE

†L_1=Switch actuation level, nominal (based on a liquid specific gravity of 1.0 and N.O. dry circuit–dimension will vary for N.C. circuit).

Common Specifications

Electrical Termination: No. 18 AWG, 24" L., Lead Wires
(Jacket material is indicated on dimensional drawings, above).

How To Order – Select Part Number based on specifications required.

Series Number	Materials: Stem, Mounting and Other Wetted	Materials: Float	Min. Liquid Sp. Gr.	Operating Temperature	Pressure, PSI, Max.	Switch*	Part Number: Mounting Size 1/4" NPT	Part Number: Mounting Size 1/8" NPT
LS-74780	CPVC		.85	-40°F to +180°F (-40°C to +82.2°C)	15	SPST, 20 VA	74780** ⚡	—
LS-1900TFE	Teflon®		.80	-40°F to +300°F (-40°C to +148.9°C)	30	SPDT, 20 VA	133299 ⚡	—
~~LS-1700TFE~~	~~PTFE~~		~~.80~~	~~-40°F to +212°F (-40°C to +100°C)~~	~~25~~	~~SPST, 20 VA, N.C.~~	~~—~~	~~174199 ⚡~~
						SPST, 20 VA, N.C.	—	174200 ⚡

* See "Electrical Data" on Page X-5 for more information.
** Switch operation is selectable, N.O. or N.C., by inverting the float on the unit stem. Units are shipped N.O. unless otherwise specified.
†† 100 VA switches are not U.L. Recognized.

⚡ – Stock Items.

APPENDIX T11

Plumbing Items

(Basic Information on Pipe, Valves, and Gauges)

CHARLOTTE
PIPE AND FOUNDRY COMPANY

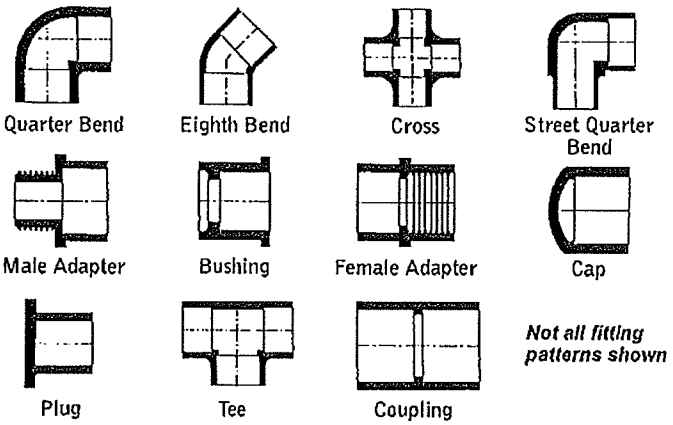
SUBMITTAL FOR CHARLOTTE PIPE®
PVC SCHEDULE 80 PRESSURE PIPE AND FITTING SYSTEM

Date: 10-8-15

Job Name: SOLUTIA GROUNDWATER RA Location: _____

Engineer: GOLDER ASSOCIATES Contractor: TAYLOR CORPORATION

Scope:
This specification covers PVC Schedule 80 pipe and fittings for pressure applications. This system is intended for pressure applications where the operating temperature will not exceed 140° F.

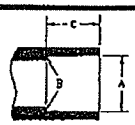


Specification:
Pipe and fittings shall be manufactured from virgin rigid PVC (polyvinyl chloride) vinyl compounds with a cell class of 12454 as identified in ASTM D 1784.

PVC Schedule 80 pipe shall be Iron Pipe Size (IPS) conforming to ASTM D 1785. Injection molded PVC Schedule 80 fittings shall conform to ASTM D 2467. PVC Schedule 80 threaded fittings shall conform to ASTM D 2464. Pipe and fittings shall be manufactured as a system and be the product of one manufacturer. All pipe and fittings shall be manufactured in the United States. Pipe and fittings shall conform to NSF International Standard 61 or the health effects portion of NSF Standard 14.

Installation:
Installation shall comply with the latest installation instructions published by Charlotte Pipe and Foundry and shall conform to all applicable plumbing, fire, and building code requirements. Buried pipe shall be installed in accordance with ASTM F 1668 and ASTM D 2774. Solvent cement joints shall be made in a two-step process with primer manufactured for thermoplastic piping systems and solvent cement conforming to ASTM D 2564. The system shall be protected from chemical agents, fire-stopping materials, thread sealant, plasticized-vinyl products or other aggressive chemical agents not compatible with PVC compounds. The system shall be hydrostatically tested after installation. **WARNING!** Never test with or transport/store compressed air or gas in PVC pipe or fittings. Doing so can result in explosive failures and cause severe injury or death.

Referenced Standards:



ASTM D 1784: Rigid Vinyl Compounds
ASTM D 1785: PVC Plastic Pipe, Schedule 80
ASTM D 2464 or D 2467: PVC Threaded Fittings, Schedule 80
ASTM D 2467: PVC Socket Fittings, Schedule 80
ASTM D 2564: Solvent Cements for PVC Pipe and Fittings
ASTM D 2774: Underground Installation of Thermoplastic Pressure Piping
ASTM F 1668: Procedures for Buried Plastic Pipe
NSF Standard 14: Plastic Piping Components & Related Materials
NSF Standard 61: Drinking Water System Components–Health Effects

NSF Listed. Meets All Requirements of ASTM D 1784 and ASTM D 1785.

⚠ WARNING

Testing with or use of compressed air or gas in PVC / ABS / CPVC pipe or fittings can result in explosive failures and cause severe injury or death.

- NEVER test with or transport/store compressed air or gas in PVC / ABS / CPVC pipe or fittings.
- NEVER test PVC / ABS / CPVC pipe or fittings with compressed air or gas, or air over water boosters.
- ONLY use PVC / ABS / CPVC pipe or fittings for water or approved chemicals.
- Refer to warnings on PPFA's website and ASTM D 1785.

Technical Specification

Heavy Duty Gray PVC Cement

Description

- Heavy-bodied grey cement for use on all schedules and classes PVC pipe and fitting up to 12" diameter with interference fit, up to 18" for non-pressure.
- Lo-V.O.C. Solvent Cement meets California South Coast Air Quality Management District (SCAQMD) 1168/316A or BAAQMD Method 40 and various environmental requirements.
- Thick formula fills gaps in large diameter pipe and loose fitting joints.
- Recommended for potable water, pressure pipe, conduit and DWV.
- Recommended application temperature 40°F to 110°F / 4°C to 43°C.
- Meets ASTM D2564.

Technical Specification

Heavy Duty Gray PVC Cement

CHEMICAL PROPERTIES		PHYSICAL PROPERTIES	
Appearance	Gray Liquid	Lap Shear Strength	(min. ASTM Standards)
Viscosity	Min. 1600 cps @73° F ± 2° F	2 hours	250 psi
Density	7.86 ± 0.2 lbs/gallon	16 hours	500 psi
Shelf Life	3 years from manufacture date	72 hours	900 psi
		Set Up Time	
		30° F to 50° F	4 – 5 minutes
		50° F to 70° F	2 – 3 minutes
		70° F to 90° F	1 – 2 minutes

Precautions

Read all information carefully before using this product.

DANGER!: CAUSES SERIOUS EYE IRRITATION. HARMFUL IF INHALED. MAY CAUSE DROWSINESS OR DIZZINESS. MAY CAUSE RESPIRATORY IRRITATION. REPEATED EXPOSURE MAY CAUSE SKIN DRYNESS OR CRACKING. Long term overexposure to solvents may cause damage to the brain, nervous system, reproductive system, respiratory system, mucous membranes, liver and kidneys. Contains a chemical classified by the US EPA as a suspected possible carcinogen. KEEP OUT OF REACH OF CHILDREN.

PRECAUTIONS: Avoid breathing vapors. Use only outdoors or in a well-ventilated area. Use explosion-proof electrical/ventilating equipment. Use only non-sparking tools. Take precautionary measures against static discharge. Wear a NIOSH-approved respirator for organic solvents. Keep away from heat/sparks/open flames/hot surfaces. No smoking. Vapors may accumulate in low places and may ignite explosively. Keep container tightly closed and cool. Wear protective gloves and eye protection. Wash thoroughly after handling. Do not eat or drink while using this product.

EMERGENCY/FIRST AID: CALL 1-877-740-5015 FOR INSTRUCTIONS.
IF SWALLOWED: Immediately call a POISON CENTER/doctor. Do NOT induce vomiting. Rinse mouth. This product may be aspirated into the lungs and cause chemical pneumonitis, a potentially fatal condition. If IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists, get medical attention. If ON SKIN: Rinse skin with water/shower. Take off immediately all contaminated clothing. If INHALED: Remove person to fresh air and keep comfortable for breathing. Call POISON CENTER/doctor if you feel unwell. If medical advice is needed, have product container or label at hand. FIRE: Use dry chemical, foam, or carbon dioxide extinguisher. Water spray may be applied to reduce potential vapors or for cooling. Burning liquid extinguished with water will _oat and may re-ignite on surface of water. SPILLS: Remove all sources of ignition and ventilate area. Personnel cleaning up the spill should wear appropriate personal protective equipment, including respirators if vapor concentrations are high. Soak up spill with absorbent material. Put absorbent material in covered, labeled metal containers. Dispose of contents/ container in accordance with local regulations. Store in a well-ventilated space. Store locked up.

Oatey®

Technical Specification

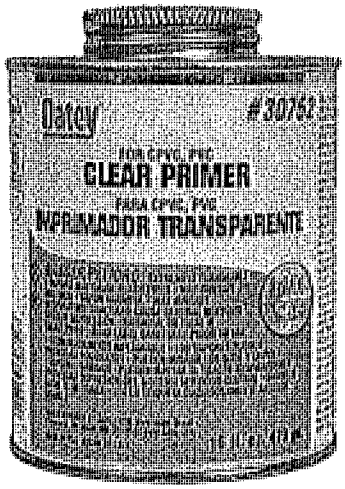
Heavy Duty Gray PVC Cement

Directions for Use

Store and use at temperatures between 40°F and 110°F. At temperatures outside of this range, special care must be taken to prepare good joints and prevent exposure to solvents. Stir or shake before using; if jelly-like, don't use. Do not thin.

1. Cut pipe ends square, chamfer and clean pipe ends.
2. Check dry fit of pipe and fitting. Pipe should easily go 1/3 of the way into the fitting. If pipe bottoms, it should be snug.
3. Use a suitable applicator at least 1/2 the size of the pipe diameter. For larger size pipe systems use a natural bristle brush or roller.
4. Clean pipe and fitting with a listed primer.
5. Apply liberal coat of cement to pipe to the depth of the socket, leave no uncoated surface.
6. Apply a thin coat of cement to inside of fitting, avoid puddling of cement. Puddling can cause weakening and premature failure of pipe or fitting. Apply a second coat of cement to the pipe.
7. Assemble parts QUICKLY. Cement must be fluid. If cement surface has dried, recoat both parts.
8. Push pipe FULLY into fitting using a ¼ turning motion until pipe bottoms.
9. Hold pipe and fitting together for 30 seconds to prevent pipe push-out - longer at low temperatures. Wipe off excess.
10. Allow 15 minutes for good handling strength and 2 hours cure time at temperatures above 60°F before pressure testing up to 180 psi. Longer cure times may be required at temperatures below 60°F or with pipe above 3".

DO NOT TEST WITH AIR.



Revision Date: 3/15/2013

Technical Specification

Clear Primer

Description

- Clear aggressive primer for use on PVC and CPVC pipe and fittings.
- Lo-V.O.C. Solvent Cement meets California South Coast Air Quality Management District (SCAQMD) 1168/316A or BAAQMD Method 40 and various environmental requirements.
- Removes surface dirt, grease and grime as well as softens the pipe surface to allow a fast, secure solvent weld.
- N SF Listed.
- Meets ASTM F656.

PolyPipe for POTABLE WATER

PW PE3408/PE4710
High Performance Pipe for Potable Water Service

FEATURES:

- Suitable applications include Potable Water, Reclaim Water, Intake Water, Raw Water and Waste Water
- Heat-fused, fully restrained, leak proof joints
- Maintains optimum flow rates due to resistance to corrosion & biological growth
- Fatigue resistant
- NSF-61 & NSF-14 certified
- Meets ASTM D3350 cell classification PE445574C
- Material grades PE3408/PE4710/PE100 per PPI TR-4
- AWWA C901 / ASTM D3035 & AWWA C906 / ASTM F714

SAMPLE PRINTLINE	12 " IPS - SDR 11 - DURALINE-POLYPIPE®PW - PE3408 - AWWA C906-PC160-PE4710-ASTM F714-200PSI - (Resin Code)(Color Code) - 1GA - (ddmmmyy) - NSF-61
APPLICATION	Potable Water Service & applications such as Mining, Landfill, Dredging, Water Reclamation or Wastewater
SIZE RANGE	½" – 65" IPS 3" – 30" DIPS
COLOR/STRIPE	Solid black, or with Stripes: blue, green, purple

PolyPipe is manufactured with high performance resins engineered with outstanding resistance to Slow Crack Growth (SCG) and Rapid Crack Propagation (RCP). The fatigue resistance of these resins improves design life in water systems where cyclic pressure surges exist.

Dura-Line is ISO 9001 certified and PolyPipe is qualified using exacting laboratory procedures and test methods, and a consistent uncompromised quest for design and manufacturing excellence.

PolyPipe® Potable Water PE4710 Pipe is manufactured in accordance with the following standards:

- For sizes ½" IPS through 3" IPS products are manufactured in accordance with ASTM D3035 & AWWA C901.
- For sizes 4" IPS through 60" DIPS products are manufactured in accordance with ASTM F714 & AWWA C906.
- Metric sizes also available.
- Coiled pipe available through 6" OD and straight lengths available in 40' and 50' lengths.
- For custom lengths, contact a Customer Service Representative.

- Pressures are based on water at 23°C (73.4°F) and are determined by use of the Hydrostatic Design Stress (HDS) as established by the Hydrostatic Stress Board (HSB) of the Plastics Pipe Institute (PPI).
- The above weights for IPS and DIPS sizes are calculated in accordance with Plastics Pipe Institute (PPI) TR-7, using a value of 0.960 for density.
- Available with color-coded striping.

PRODUCT SPECIFICATIONS SHEET

BUTT FUSION FITTINGS (IPS)
PE3408 / PE4710 HDPE
BLACK

SCOPE:

This document describes the standard specifications and features related to Georg Fischer Central Plastics' injection molded PE4710 (formerlyPE3408) Butt Fusion Fittings for pressure piping systems.

SIZES:

1/2" CTS through 2" CTS.	TEE, 90 DEGREE ELBOW, REDUCER, CAP,
1/2" IPS through 12" IPS.	TEE, 90 DEGREE ELBOW, 45 DEGREE ELBOW, REDUCER, CAP, PURGE FITTING,

REQUIREMENTS:

ASTM D2513	Specification for Thermoplastic Gas Pressure Pipe, Tubing, and Fittings
ASTM D3350	Specification for Polyethylene Plastic Pipes and Fittings Materials
ASTM D3261	Specification for Butt Heat Fusion Polyethylene (PE) Plastic Fittings for Polyethylene (PE) Plastics Pipe and Tubing

REFERENCE DOCUMENTS:

PPI TR-19	Thermoplastics Piping for the Transport of Chemicals
PPI TR-31	Underground Installation of Polyolefin Pipe
PPI TR-33	Generic Butt Fusion Procedure for Polyethylene Gas Pipe
ASTM D2657	Standard Practice for Heat Fusion Joining of Polyolefin Pipe and Fittings

CERTIFICATIONS/LISTINGS:

FM 1613	Approval Standard: Plastic Pipe and Fittings for Underground Fire Protection Service
AWWA C906	Standard for Polyethylene Pressure Pipe and Fittings, 4 in. Through 63 in., for Water Distribution
FM 1613	Approval Standard: Plastic Pipe and Fittings for Underground Fire Protection Service
ANSI/NSF 14	Plastic Piping System Components and Related Materials

MATERIALS:

PE Resin: Pre-blended black high density virgin resin. Recognized by the Plastic Pipe Institute as having a PE3408 / PE4710 / PE100 rating and a Hydrostatic Design Basis of 1600 psi @ 73°F. This resin has a cell classification of 445574C* in accordance with ASTM D3350.

Note* Previous editions of ASTM D3350 resulted in cell classifications of 345464C and 345564C.

TEST METHODS:

ASTM D1598 — Time-to-Failure of Plastic Pipe Under Constant Internal Pressure.
Must exceed 170 hours in 80°C bath @ 670psi Hoop Stress, or
Must exceed 1000 hours in 80°C bath @ 580psi Hoop Stress, or
Must exceed 1000 hours in 23°C bath @ 1600psi Hoop Stress.
(All methods are considered equivalent)

ASTM D1599 — Short-Term Hydraulic Pressure Failure of Plastics Pipe, Tubing, and Fittings.
Uniform pressurization until failure between 60 and 70 seconds from start of test. Most result in ductile failure at a pressure great enough to create a 2520psi Hoop Stress.

ASTM D2122 — Test Method for Determining Dimensions of Thermoplastic Pipe and Fittings
Determination of diameter, wall thickness, and length dimensions including procedures for dimensioning molded thermoplastic pipe fittings.

39605 Independence, Shawnee, OK, 74804 | 1.800.654.3872 | www.gfcp.com

FEATURES:
Made in USA from pre-blended virgin materials. These fittings are availabe in various configurations and DR and are primarily intended for use in pressure piping applications. These fittings are compatible for heat fusion to any PE material made from a like or similar resin. Select sizes can be supplied with AWWA or FM marking. Designed for use on pipe conforming to ASTM F714, D2513, and D3035.

PRESSURE RATING:
PE4710 Butt Fusion Fittings are pressure rated in accordance with industry and regulatory guidelines for natural gas or water @73°F. Pressure ratings are subject to change depending on ambient temperatures. Pressure ratings vary according to wall thickness and the design factor for the intended application, see below for ratings:

Fitting SDR	Pressure Rating (PSI) @ 73° F (23° C)			
	Water (.63 DSF)	Water (.5 DSF)	Natural Gas (.32 DSF) US	Natural Gas (.4 DSF) Canada
7	335	265	170*	215*
9	250	200	125*	160*
11	200	160	100	125
13.5	160	125	80	100
17	125	100	65	80
21	100	80	50	65
26	80	65	40	50
32.5	65	50	30	40

* Subject to maximum operating pressure limits of regulatory requirements.

Minimum wall thickness for plastic piping gas distribution systems is limited to .062".

Above listed pressure ratings based on 73°F ambient temperature. Pressure ratings subject to derating depending on temperature.

PRESSURE TESTING:
Pressure testing can be conducted in accordance with the recommendations of the pipe manufacturer, or as described in ASTM F2164 *STANDARD PRACTICE FOR FIELD LEAK TESTING OF POLYETHYLENE (PE) PRESSURE PIPING SYSTEMS USING HYDROSTATIC PRESSURE,* typically 1.5 x's the rated working pressure not exceeding 8 hours in duration for a single test.

MAXIMUM OPERATING TEMPERATURE:
The maximium operating temperature of PE4710 Butt Fusion Fittings is 140°F. Pressure de-rating factors should be considered when operating systems above the 73°F stated pressure rating, to maintain the 50 year substantiated long-term hydrostatic strength of the polyethylene material.

STORAGE/SHELF LIFE:
Black high density polyethylene resin contains a minimum of 2% of a finely dispersed concentration of carbon black which provides protection from UV effects. Even so, it is recommended that fittings which are stored for extended periods (two years or greater) be stored indoors in their original packaging. Fittings stored indoors in their original packaging have a virtually unlimited shelf-life.

CHEMICAL RESISTANCE:
Polyethylene generally exhibits strong resistance to many chemical compounds. Known chemical resistance characteristics at specified temperatures can be found in PPI Technical Report TR-19.

INSTALLATION:
These fittings are compatible for heat fusion by butt, socket, or electrofusion joining products. They can be heat fusion joined to pipe or fittings manufactured from like or similar resin. Qualified mechanical joining products can be used to join these fittings, consult the manufacturer for recommendations. Fusion jointing should only be attempted by persons who have been trained and have qualified joints through destructive testing.

Note: This Specification supercedes all previous Product Specifications and is subject to change without notice.

Part Name: Male thread HDPE Transition Fitting
Series 710 Carbon Steel, T304, ~~T316~~, Stainless Steel

Threaded Transitions

The POLY-CAM Threaded Transition Adaptors is a multi-level mechanical transition fitting, protected under patent number 5,211,429, which is hydraulically compressed unto the polyethylene or pipe quality copolymer material.

Design

The relaxation creates a seal to prevent leakage. Under pressure, the internal pressure within the pipe increases the sealing surface area on the barb. Under zero internal pressure, the compression strain and tensional strain created by the compression of the multi-level barbs is greater then the stress created by relaxation and/or thero expansion and contraction. As the internal pressure increases the joining of the polyethylene or copolymer and the coupling increases.

Sizes range from .5" to 12" NPT. All National Pipe Threads are made to ANSI/ASME B1.20-1983 R 1992.

System Performance

The transition fitting is designed to handle the pressure rating of the HDPE pipe with a 2:1 safety factor at 73.40 degrees Fahrenheit with a minimum 50 year design life.

Quality Assurance

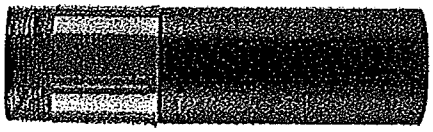
The transition fitting shall be manufactured by Poly-Cam, Inc. Poly-Cam, Inc. shall provide quality assurance with regards to proper installation, compatibility, performance, and acceptance. Transition joint meets or exceeds the requirements of ASTM D2513 Category 3. Upon request Poly-cam can install a stainless steel insert to meet ASTM 2513 Category 1. All Fittings meet ARRA requirements. Manufactured in the United States.

Installation

HDPE pipe end: Install transition fitting so as to comply with the pipe manufacturer's recommended procedures. All field welds shall be accomplished in accordance with Plastic Pipe Institute's welding procedure for butt fusion.

Threaded Fitting: When installing the transition fitting one should always use pipe joint sealant or Teflon tape. Always use strap wrenches. **Do not use pipe wrench. Always use 2 wrenches when connecting, Over tighten may cause ovality or damage. Always pressure test for leaks before backfilling.** Backfill and compact carefully around transition and service line to prevent ground shifts which could damage the valve and/or transition fitting.

Material



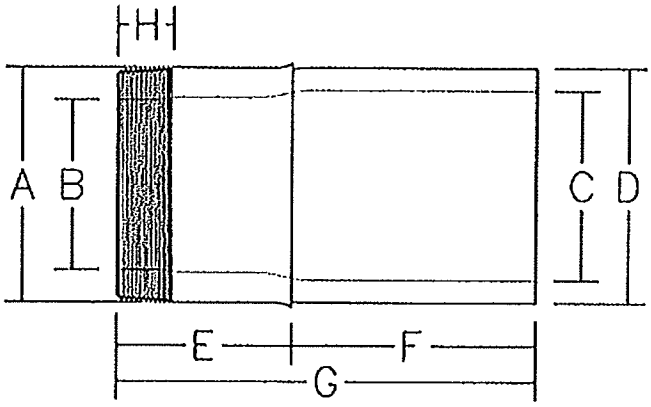
The POLY-CAM Threaded Transition is manufactured of ~~Carbon Steel (A53 or A106 grade)~~ Type 304 ~~or Type 316 (ASTM A249 or ASTM A269) and or ERW pipe (ASTM SA-312) and~~ incorporated with the transition manufactured of HDPE (cell class 345454c) or pipe quality Copolymer material. (pe3408, pe3608 and pe4710). All pipe meets ASTM 3035 and ASTM 714. It complies AWWA C-901, C906 and NSF 61. All certification will be submitted upon request.

The **epoxy coating** (IF 194T Red Iron Oxide) is fusion bonded to the metal. It has approvals NSF 61, FDA 175.300, AWWA C116-01,C213-01, UL 262 and FM 1120/1130
The carbon steel epoxy POLY-CAM threaded transition fitting complies with AWWA and NSF 61 material requirements.

Warranty

Warranty period is one year after date of substantial completion of installation.

Series 710
Transition with
Male NPT



POLY-CAM Male Threaded Transition Adaptors (710 Series) is a multi-level mechanical transition fitting, patent number 5,211,429. The POLY-CAM Threaded Transition is manufactured to the following;

- **Carbon Steel Epoxy Coated, 304 and 316 Stainless Steel**
- **Other steel materials can be made depending on availability.**
- **Sizes range from .5 to 12" NPT**
- **Meets ANSI/ASME B1.20-1983 R 1992**
- **All materials comply with AWWA and NSF 61 Meets ASTM 2513 Category 3. Upon request Poly-cam can install a stainless steel insert to meet ASTM 2513 Category 1**

FNW™

FULL PORT TRUE-UNION BALL VALVE

Figure 340N - PVC with NPT and SW Ends*

Figure 340NF - PVC with 150# Flanges

Figure 350N - CPVC with NPT and SW Ends*

SW only on sizes over 2". NPT is available upon request.

Valve Features

- Full Port Design
- Pressure Rating: 150 PSI
- Temperature Range:
  - PVC: 41°F to 122°F (5°C to 50°C)
  - CPVC: 32°F to 194°F (0°C to 90°C)
- Certified to NSF 61 Annex G
- ~~EPDM~~ or FPM (Viton®) Seals
- O-ring Energized Seats (up to 2")
- Bidirectional Flow *
- Adjustable Seat Tightness
- Easy Disassembly with Handle
- Easy Replacement Reduces Down Time
- Can Be Modified for Actuator Installation

* Note that the valve has a preferred flow direction indicated by the embossed arrow on the body. The preferred flow direction orients the carrier upstream so that downstream piping can be removed with valve closed.

Standards

Figure 340N Connections:
- Threaded: ASTM D-2464, ref. ANSI B1.20.1
- Socket: ASTM D-2467

Figure 340NF Connections:
- Flanged: ANSI B16.5, Class 150

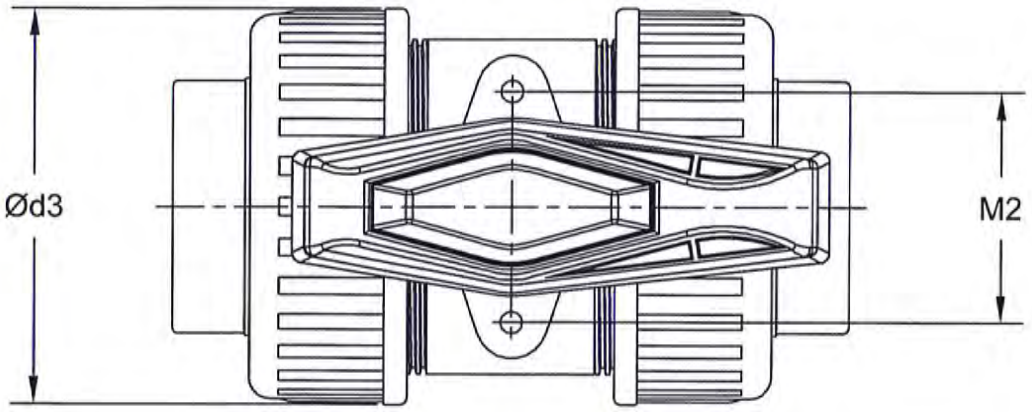

Figure 350N Connections:
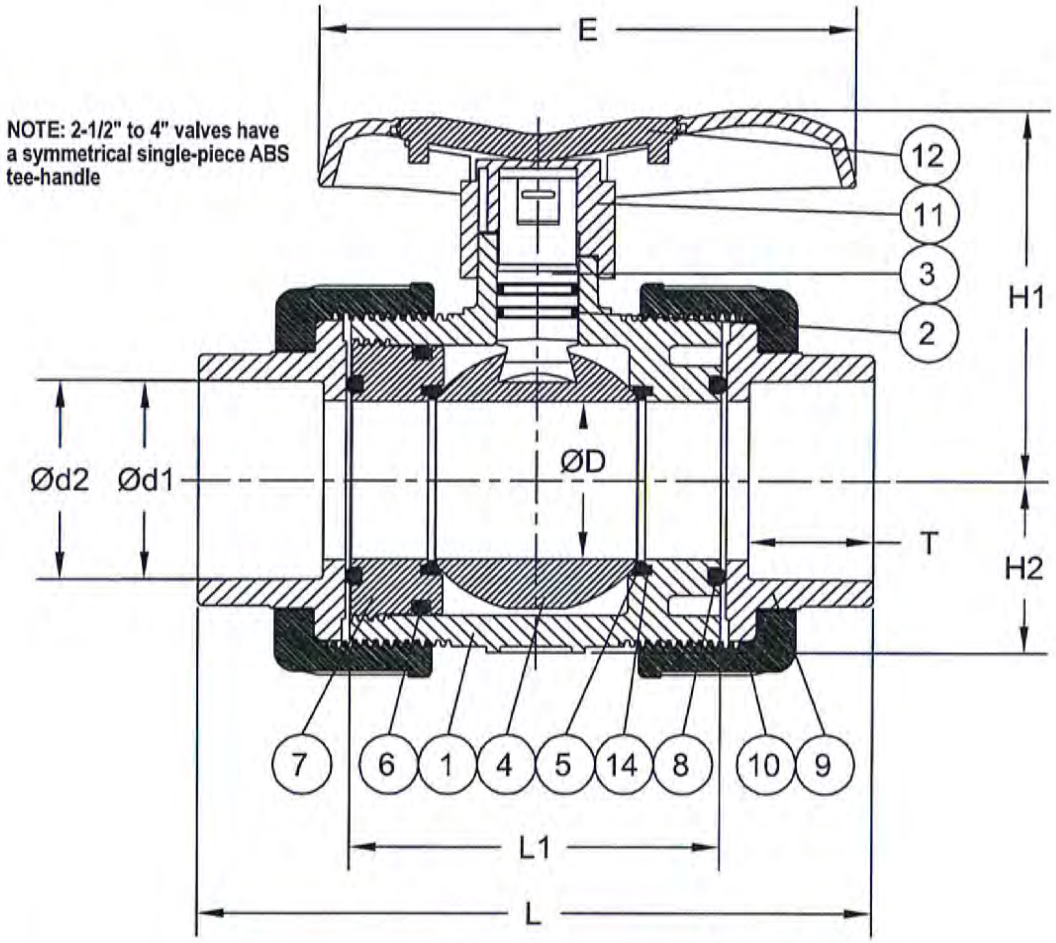
- Threaded: ASTM F437
- Socket: ASTM F439



Materials:
- PVC: Cell Classification 12454 per ASTM D1784 (formerly Type I, Grade 1)
- CPVC: Cell Classification 23447 per ASTM D1784 (formerly Type IV, Grade 1)

Options

FNW offers many options and modifications for valves. These include, but are not limited to: Actuation including chain wheels, worm gear operators, pneumatic and electric operators, control accessories, stem extensions, and custom mounting hardware. Contact FNW with your specific application needs.

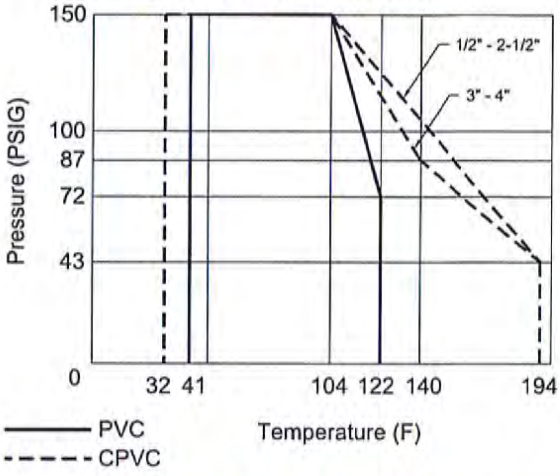
About PVC

Unplasticised Polyvinyl Chloride, or PVC, is the most widely used of all plastics and commonly used for pressure pipes, fittings, and valves. It is rigid, suitable for above and below ground applications. PVC has good chemical resistance and is odorless and tasteless. It is for use with liquids and gasses with temperatures +32°F to +140°F* (for higher temperatures see CPVC) at a wide range of operating pressures. Some poorer quality PVC can leach chemicals into water which can build up in recirculation systems, however most modern pipe is built to specific standards (e.g. BS3505/6, ASTM D 1785, ASTM D2241, DIN 8061/2, KIWA 49, BS4346 PART 1, DIN 8063) to control this. ASTM D1784 controls the compounds for rigid PVC and CPVC.

About CPVC



Chlorinated Polyvinyl Chloride, or CPVC, has been offering the process industry superior corrosion resistance, mechanical strength, and excellent life-cycle economics in a single package. Conceptually, CPVC is a PVC homopolymer that has been subjected to a chlorination reaction. It is generally inert to most mineral acids, bases, salts, and paraffinic hydrocarbon solutions. CPVC is not recommended for use with chlorinated or aromatic hydrocarbons, esters, or ketones. The upper temperature limit on CPVC is 200°F*. There is no lower temperature limit on CPVC and the material will withstand pressure. However, at very cold temperatures, the material will become brittle and the impact strength will decline.

*** Note: Other materials within valves besides PVC and CPVC can have an affect on the temperature limits of the valve. Temperatures noted above are for the thermoplastic material alone.**

Self-Closing Thermoplastic Check Valves...

Patented Diaphragm Design Assures Dependable, Repetitive, Bubble-Tight Sealing... and They Can Be Mounted in Any Position!

Sizes: 1/2", 3/4" and 1"

Features/Benefits:

- **Patented Design:** Self-sealing - are not dependent upon gravity, mounting position or reverse flow, a significant improvement over ball check valves.
- **Silent Operation:** No internal sliding or loose parts to slam or vibrate - chattering is eliminated!
- **Dependability:** Leak-free sealing protects against the potential hazards created by reverse flow of corrosive liquids such as acids, caustics and chlorine solutions.
- **Repetitive Long Term Sealing:** Diaphragm automatically positions itself against seat in the identical location. Superior to ball check valves which often leak at lower pressures.
- **Convenience:** Union nut on Series CKM simplifies valve inspection/removal with minimum piping breakdown.
- **Minimal Cracking Pressure:** Diaphragm begins to open at approximately 1.0 to 1.5 PSI.
- **Cost Efficient:** Designed to improve system performance and competitively priced.

Materials of Construction:

Plast-O-Matic Series CKM Check Valves are molded of Type 1, Grade 1, PVC (Polyvinyl Chloride), Glass-filled Polypropylene, Corzan® CPVC, and Kynar® PVDF in sizes 1/2", 3/4" and 1". A machined version, Series CK is available in PTFE in sizes 3/4" and 1". Diaphragms are of EPDM or FKM (Viton®). Threaded connections are standard on all models. Socket end connectors are available on all Series CKM models.

Note: For information on 1½", 2" and 3" models, refer to Catalog CKS.

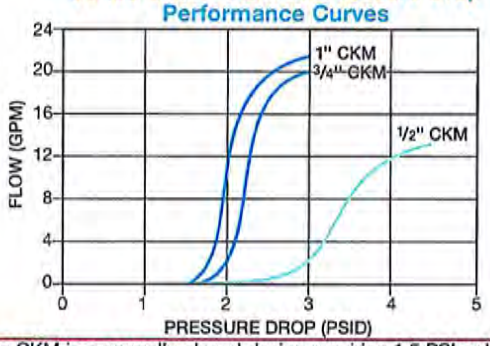
Series ~~CKM &~~ CK Diaphragm Check Valves 1/2", 3/4" & 1"

Design

Series CKM & CK Check Valves, normally closed in design, feature a patented diaphragm seal that will neither stick nor chatter and is automatic in action. The valves are not dependent upon gravity so they can be mounted in any position. Even in the absence of reverse flow or pressure, the diaphragm will automatically reposition itself to seal against the valve seat. This is achieved with or without the presence of reverse flow. The unique and patented diaphragm will seal in the identical location every time producing a more reliable and repetitive seal.

The molded Series CKM models have only one moving part – the diaphragm. This provides both design simplicity and maximum operating dependability.



Operation

Flow entering the valve inlet will open the valve by pushing the diaphragm off the valve seat until it comes to rest on the internal stop. This supports the diaphragm and eliminates force or stress under high flow condition. In this position both the diaphragm and valve seat are kept clean by the flushing action of the internal flow, keeping the entire sealing area free of particles which could cause leakage.

If the inlet flow is either stopped, or if a backflow of a higher pressure is sensed, the diaphragm will automatically reposition itself, closing off the valve seat. Reverse flow or pressure is not required to close the valve when the inlet flow stops. If reverse pressure is present it simply creates a tighter seal.

Series CKM – Flow vs. Pressure Drop Performance Curves

Series CKM is a normally-closed design requiring 1.5 PSI or less to open

Installation

Because of its normally closed design the Plast-O-Matic CKM and CK Check Valves can be installed in any position; concern over the valve seat closing due to gravity (as with ball check designs) is of no consequence. Caution should be exercised to make certain that the direction of flow is correct. Threaded connections should never be made to metal piping and should always be wrapped with PTFE or other acceptable pipe sealant to effect a seal. The assembly need only be made hand tight followed by a one-quarter turn more with a strap wrench. *DO NOT* overtighten and *DO NOT* use a pipe wrench as a future valve fracture could result.

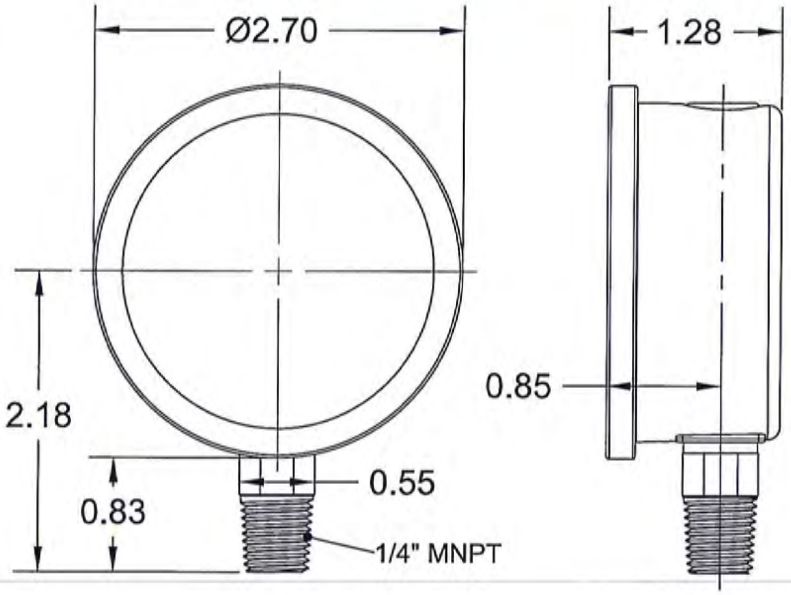
GAUGES & THERMOMETERS

FNW™

2-1/2" LIQUID FILLED GAUGE

Liquid-filled pressure gauges provide users with a number of advantages in certain measurement applications. They are ideally suited for uses on equipment where excessive vibration and pulsation are encountered, such as pumps, compressors, and machine tools.

Features:



- Dual Scale (PSI and kPa)
- +/- 1.5% of Full Scale Accuracy
- 304SS Case and Crimp-On Bezel Ring
- Glycerin Filled
- Phosphor Bronze C-Shaped Bourdon Tube
- 1/4" OT 58 Brass MNPT Connection
- OT 59 Brass Movement
- Black Anodized Aluminum Pointer
- White Aluminum Dial with Black and Red Markings
- Tin/Copper Alloy Welding
- Polycarbonate Lens
- Buna N Socket Gasket and Fill Plug
- Silicone Gasket at Lens (Non-wetted Part)
- 75% of Full Scale Working Pressure
- 25% Over-Pressure Limit
- -4°F to 150°F (-20°C to 65°C) Process and Ambient Temperature Limit
- IP65 Enclosure Rating

RE: Operable Unit 3 Design Change
- Curb Additions for Area A
Anniston PCB Site, Anniston, Alabama

EPA CERCLA ID # ALD000400123
EPA RCRA ID # ALD004019048

Dear Ms. Macolly:

The U.S. Environmental Protection Agency has reviewed the change to the design of the cover system for Area A in operable unit 3 of the Anniston PCB Site. This change was provided by email from you on July 20, 2016. The purpose of this letter is to document that the EPA agrees that the change is appropriate based to prevent damage to the liner. The changes should not affect the remedial objective to reduce groundwater infiltration in the area.

If you have any questions, please contact me at (404)562-8935.

Sincerely,

Pamela J. Langston Scully, P.E.
Remedial Project Manager
Superfund Remedial Branch

RE: Operable Unit 3 Design Change
- Cover System for Area E
Anniston PCB Site, Anniston, Alabama

EPA CERCLA ID # ALD000400123
EPA RCRA ID # ALD004019048

Dear Ms. Macolly:

The U.S. Environmental Protection Agency has reviewed the change to the design of the cover system for Area E in operable unit 3 of the Anniston PCB Site. This change was provided by email from Steve Moeller on August 3, 2015. The purpose of this letter is to document that the EPA agrees that the change is appropriate based on the physical obstructions and future use plan for the area. The changes will maintain the remedial objective to reduce groundwater infiltration in the area.

If you have any questions, please contact me at (404)562-8935.

Sincerely,

Pamela J. Langston Scully, P.E.
Remedial Project Manager
Superfund Remedial Branch

Subject: [I] RE: Proposed Changes to Final Design, Operable Unit 3 Remedial Action (OU-3 RA) Cover Systems Project

Gayle,
I have reviewed the changed to the OU3 RD sent in your January 25th email. Tom Dahl and I discussed the changes with Mike Price during a site visit on January 25, 2016. I don't have any comments, and I approve of the modifications to the Remedial design. Thanks.
Pam

Subject: Proposed Changes to Final Design, Operable Unit 3 Remedial Action (OU-3 RA) Cover Systems Project

Hi Pam:

On behalf of Solutia Inc. and Pharmacia LLC (collectively, P/S), please find enclosed three (3) drawings showing proposed design changes to Areas A, E and H for the Operable Unit 3 Remedial Action (OU-3 RA) Cover Systems Project. As communicated previously, P/S are considering these changes to coordinate future Plant projects with remedial activities related to the Anniston PCB Site. Details of the proposed changes are listed below:

- P/S propose to raise the height of the retaining wall along the perimeter of the "Future Controls Building" area

(building footprint is shown on Sheet 06 of the OU-3 Remedial Design Drawings). Details of the wall raise are included in the attached Area E Wall Profile (Control Building Area) drawing. This modification will accommodate future construction of the Control Building (not part of the Cover System or RA contract), and will not impact the overall design or construction of the cover system within Area E. Modifications to the wall in Area E are proposed to match the height of a future foundation wall that will be constructed for the Control Building. P/S will provide construction details of the foundation and surrounding concrete covers for the Control Building upon completion.

- The original site fencing layout was provided in Sheet 13 of the OU-3 Remedial Design Drawings. This layout has been revised to accommodate future landscaping along the visitor parking and sidewalk entrance area outside of the Plant's main offices (Area H) and to allow for better access in and out of the parking lot. Setting the fence-line back 7 feet will allow room for people to more safely access the parking lot and to install landscaping between the existing sidewalk and outside of the fence. The proposed fence layout within Area H is included in the attached Proposed New Fence Alignment (Area H) drawing. The proposed design includes removing an existing tree, locating the additional fencing as shown, and pouring a concrete cover along the eastern side of the visitor parking. For reference, the original fencing layout is included on the drawing.

- P/S propose a design change around the vault/pump station located on the western portion of Area A as shown on the attached Vault/Pump Station Locations/Details drawings. The originally approved design calls for construction of a concrete retaining wall around the perimeter of the pump station with a geomembrane and soil cover system on the adjacent areas. The design modification would replace a portion of the geomembrane cover with a six-inch concrete cap as approved under the IROD and shown on Sheets 10 and 11 of the Final Design Drawings. P/S would construct a six-inch concrete cap around the existing pump station and electrical components located in this area rather than attempting to cover this area with the geomembrane cover system. This modification will only affect approximately 1,000 sq ft (0.02 acres) of the capped area for Area A and would significantly expedite construction. The concrete cover would be constructed in accordance with the appropriate drawings and specifications included in the 100% design. P/S believe that this modification is appropriate and would actually provide a better cover system over this small area due to the challenges anticipated with installing the retaining walls and constructing a 2-ft thick cover over such a small area.

Please let me know if we have provided sufficient information for you to review and approve these proposed changes. If acceptable to you, we would document the change as part of the final as-built construction drawings.

Please do not hesitate to contact me at (256) 770-1299 with any questions and/or comments that you may have regarding this submittal.

Thanks,
Gayle

APPENDIX U4

Topsoil Borrow Source Approval

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 4
ATLANTA FEDERAL CENTER
61 FORSYTH STREET
ATLANTA, GEORGIA 30303-8960

July 31, 2015

Ms. E. Gayle Macolly
Manager, Remedial Projects
Solutia, Inc.

Anniston, Alabama 36201-5328

RE: Topsoil Borrow Source
Operable Unit 3
Anniston PCB Site, Anniston, Alabama

EPA CERCLA ID # ALD000400123
EPA RCRA ID # ALD004019048

Dear Ms. Macolly:

The U.S. Environmental Protection Agency has reviewed the proposed topsoil borrow source evaluation report prepared for the Anniston PCB Site. Based on the sampling resulting include in the report, the EPA approves the use of the stockpiled soil from the Oxford Recreational Complex in Oxford, Alabama. If you have any questions, please contact me at (404)562-8935.

Sincerely,

Pamela J. Langston Scully, P.E.
Remedial Project Manager
Restoration and Sustainability Branch

APPENDIX U5

SWMU-1 Design Change and Seep Capture

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION 4
ATLANTA FEDERAL CENTER
61 FORSYTH STREET
ATLANTA, GEORGIA 30303-8960

August 28, 2016

Ms. E. Gayle Macolly
Manager, Remedial Projects
Solutia, Inc.
702 Clydesdale Avenue
Anniston, Alabama 36201-5328

RE: Operable Unit 3 Remedial Action
- SWMU 1 Design Change and Seep Capture
Anniston PCB Site, Anniston, Alabama

EPA CERCLA ID # ALD000400123
EPA RCRA ID # ALD004019048

Dear Ms. Macolly:

The U.S. Environmental Protection Agency has reviewed the change to the design of the SWMU groundwater extraction and treatment system which includes a plan to capture an intermittent seep that continues to impact the cover system constructed over the PCB Cells as part of the interim remedial action for Operable Unit (OU) 3 of the Anniston PCB Site. Design documents were submitted on May 13, 2016 and June 16, 2016. The purpose of this letter is to approve the submitted changes to the groundwater extraction and treatment system for SWMU 1. The EPA is aware that there may be additional specification changes under consideration for the vessels and/or tanks associated with the treatment system. Those changes should also be submitted for approval.

The EPA notes that the information related to the seep near the PCB cells is focused on a quick solution for handling the intermittent seep rather than investigating and possibly eliminating the seep. Although the proposed sump will provide a solution for handling the water, it may or may not be the best solution. More information relative to the seep south of the PCB cells is required as discussed below.

1. It appears from the surface elevation map of the landfill that Cell 1E and Cell 2E are located at a higher elevation than the seep. The topographic map also shows a steep downward slope east of the seep location. Although the landfill was covered with an impermeable cap, it is possible that the water table inside the landfill could rise above the elevation of the seep and that groundwater flow from various areas could drain to the seep. No discussion of the groundwater table elevation during the period when the seep was flowing was presented in the memo. There are a few wells up and down gradient of

the seep. Groundwater elevation during the wet season along with the seep elevation should be analyzed thoroughly, to evaluate flow direction and implications to the seep.

2. The elevation of the land surface south of the landfill is higher than the elevation of the seep (Figure 4). This area could be the potential recharge zone for the seep. Topographic map shows some thick vegetation east of MW-01B. This area should be studied thoroughly for potential source of the seep.

3. There was no discussion in the memo on the proposed sampling frequency and parameters from the sump proposed to collect water from the seep (Sheet F). A detailed monitoring plan should be provided.

4. No monitoring wells from immediately upgradient and downgradient of the south landfill should be abandoned until the source of the seep water is identified. These wells could be useful in identifying the source of the seep.

5. The map of the wells proposed for abandonment in a separate June 2, 2016 submittal should also include the wells remaining in the PSVP (Performance Standard Verification Plan). In addition, maps of groundwater equipotential lines should be provided for both wet and dry seasons. Review of the well abandonment plan will be completed upon receiving the map.

If a response to these comments cannot be provided within 30 days, please provide a proposed schedule for addressing them. If you have any questions, please contact me at (404)562-8935.

Sincerely,

Pamela J. Langston Scully, P.E.
Senior Remedial Project Manager
Restoration and Sustainability Branch

APPENDIX U6

Notification for Off-Site Disposal (Three Corners Facility)

Stevenson, Kelly

Incident Report

*(use this form to report **non-employee** injuries and property damage)*
Please be as accurate as possible. We encourage reporting of all incidents.

Date: 8/28/15 Time of accident: 7:45 PM

Name of person reporting incident (please print): JASON W. JOINER

Street Address 702 CLYSDALE AVE

City ANNISTON State AL Phone #: 256-499-6948

COMPLETE THIS SECTION IF THERE WAS AN INJURY:

Type of Bodily Injury (If any): _____

The injured person(s) is a:

Location of accident: _____

Name(s) of Person(s) injured: _____

_____

Describe exactly what happened: AT Approx. 0630 on 29 AUG 15 I RECEIVED NOTIFICATION THAT THE REMEDIATION GATE #1 HAD BEEN LEFT UNLOCKED AFTER TC CREW HAD LEFT THE SITE FOR THE DAY. THE GAURD WAS INSTRUCTED ~~THE~~ THE GATES ARE TO BE DOUBLE CHECKED BEFORE LEAVING

Signature: _____ Date: 8/31/15
