4.0 SUMMARY OF ACTIVITIES

Location:

0615 Golder arrived onsite.
0645 Golder conducted H&S meeting with Taylor employees that would be working on excavation. Golder received Call from IWI to pick up roll offs to be moved to the locations where IW26-29 will be installed. There was a partial delay in moving the roll offs because the truck to move the roll offs got stuck at entrance for approximately 1 hr. Once roll offs were placed at well locations excavation of IW29 commenced then IW28. The excavated hole size was a little bigger than the anticipated size of 4x4 because of the size of equipment used to perform the work (KOMATSU PC 200) actual size of excavated holes 4x5. Golder estimates the roll off contains b/w 7-8yds of material. Upon completion of the excavation of IW28/29 excavator bucket was deconed using dry method of sweeping bucket/shoveling of bigger pieces of soil that was stuck on the bucket. Clean soil was then placed in the two holes and compacted.

10:30 Unloaded excavator at IW 26-27 area and began excavation of IW26 and 27. As stated above hole size was bigger than anticipated because of equipment used. Once hole were excavated bucket was deconed and clean soil was placed back in the holes and compacted

1030 Unloaded excavator at IW 26-27 area and began excavation of IW26 and 27. As stated above hole size was bigger than anticipated because of equipment used. Once hole were excavated bucket was deconed and clean soil was placed back in the holes and compacted.

4.0 SUMMARY OF ACTIVITIES

06:20 Arrive onsite.

Morning: Went to main office to get excavation permits signed for the drilling on 8/10/15 for the areas IW 26-27. Labeled the roll off containers at areas IW26-29 with PCB stickers. Continued to setup trailer. Taylor finishing up decon pad at the exit of the PCB cells.

Afternoon: Golder left site to go pick up the printer that was ordered at Office Max. Spent most of the afternoon trying to get the printer connected to the computer and eventually had to go back to Office Max to have an employee there set it up.

Contractor began building decon pad near office trailer.

1500 contractor left site.

4.0 SUMMARY OF ACTIVITIES

0615 Arrive onsite H&S meeting with Taylor at 0630
0730 Truck with drilling supplies arrived onsite to be unloaded for the IW 26-29 well install and well raising

0800 Rich Poff onsite waiting on drillers.

Taylor continuing to build decon pad office trailer location also moving trees in the borrow source area so that they are easier to get at for chipping.

Golder printed out liner forms to be used for the liner cap PCB area

Cascade arrived onsite mid- morning and took the H&S video for the plant

Afternoon

Taylor sprayed herbicide in the PCB area where there were a few spots that were getting green again. Not big areas located on the east side of the site.
Cascade removed bollards around wells OW-6D and OW10. also raised well T-6 and removed the metal casing around OWR11. Rich does not want to remove the concrete slab at OWR11 for fear of damaging the well. I told him I would just put the base layer of soil in thicker in that area.

4.0 SUMMARY OF ACTIVITIES

0615 arrive onsite H&S meeting with Taylor. Contractor has 11 men onsite 4 of which are working for Eastman today repairing a fire line on site

Morning Golder (Rich Poff) and the Cascade drilling company finished cutting off the metal stickup to OWR11they did not remove the concrete pad for fear of damaging the well. Driller/Golder then moved to OWR6D to abandon well. Golder did not remove the casing during abandonment.

Taylor for the whole day continued to move brush and surveyed area for the ditch that will be installed along the south side of the borrow source

Golder collected sample of DGA from the Vulcan pit. First sample tested failed gradation. Collected sample from 3 different locations from the small pile that was at the pit. Contractor was going to track mini excavator across HWY 202. Josh saw what the contractor was about

Golder, Golder Associates and the GA globe design are trademarks of Golder Associates Corporation

to do and stopped them. Don Williams then immediately called all workers to the trailer to discuss

Drilling in the afternoon consisted of continuing to abandon OWR6D

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

Plant is currently in "shut-down" and Taylor's crew is beginning excavation in the south side of the autoclave area. Roll-offs, poly sheeting, and "exclusion zone" are in place as part of decontamination procedures.
Material is being excavated with the mini-excavators and by hand, placed into skid steers, and moved into the front-end loader.
Some areas around south stair landings are being hammered and chiseled out.
13:00 Lance Taylor (Taylor Corp) indicated that the mini-excavator contacted a 12-inch inactive terracotta pipe in the vicinity of the fire water shed. Tom Collins will be contacted to verify line is inactive.
15:25 work stopped due to lightening in the area. Excavated material stockpile is covered with poly sheeting.
Excavation will continue on night shift.

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

"Taylor's crew continues excavation progress in the north, west and east side of the autoclave area. Roll-offs, poly sheeting, and ""exclusion zone"" are in place as part of decontamination procedures.

7:20 to 7:45 work suspended due to heavy rain

10:15 Golder performs field measurement of excavation depths.

13:00 Josh Threadgill surveys in exposed areas of concrete along north side of autoclave

16:05 Komat'su mini excavator has contacted and damaged eastern-most PVC steam condensate line. Sump is dug at the toe of the autoclave slope and PVC is brought in to divert flow away from surface and into drain at toe of wall.

Excavation and chipping of concrete obstructions will continue on night shift."

Location: PCB Cells

No activity was noted. Some re-vegetation is occuring in select locations

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

"Taylor's crew continues excavation progress in the north side and slope of the autoclave area. Roll-offs, poly sheeting, and ""exclusion zone"" are in place as part of decontamination procedures.

13:00 Taylor has laid out grade lines. EPA (T. Chuhay) and Golder (P. Callahan and S. Moeller) measure and verify excavation depths. Areas in which no obstructions are present are excavated down to a nominal 12 inches. Areas in which concrete obstructions are present at a depth less than 6 inches are being chipped out.

14:00 Begin placing DGA in eastern portion of Autoclave. Material is being spread to create a clean working surface. Equipment is being decontaminated accordingly.

Contractor:	Taylor Corp.		

Date: Thursday, August 20, 2015

1.0 SITE CONDITIONS

Weather Condition:	Mostly sunny with periodic rain
Temperature:	73-88 °F
Precipitation:	0.8 inches

2.0 HEALTH AND SAFETY

Issues:	The autoclave is a tight working space, stay alert and watch for equipment.

3.0 GOLDER PERSONNEL ON SITE

Name	Time on Site
Patrick Callahan	6:30 to 16:00

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

"A majority of the autoclave soil has been removed; Taylor is chipping concrete obstructions and placing, spreading, and compacting dense graded aggregate (DGA) soil.

7:10 Acker Electrical is on site to update grounding cables to allow for concrete to be poured.

Fabric has been placed under DGA in southeast corner (in vicinity of fire water pump and valves)

Taylor is checking grades to ensure proper drainage and prepare for 6-inch concrete cover.

11:00 Brown Concrete begin placing wood form for new wall on northwest side of autoclave.

11:10 Golder begins to test compaction of DGA along the southern and eastern end of the autoclave. Based on nuclear density gauge testing, Golder recommends that 4 to 5 passes with the plate tamper is sufficient. A new, larger plate tamper is delivered to site for increased compaction effort. Results of nuclear density gauge testing are attached.

Golder Associates Inc.
3730 Chamblee Tucker Road

Tel: (770) 496-1893 Fax: (770) 934-9476 www.golder.com

Golder Associates: Operations in Africa, Asia, Australasia, Europe, North America and South America

Golder, Golder Associates and the GA globe design are trademarks of Golder Associates Corporation

12:30 Due to a decrease in water content of the DGA material, Golder recommends that Taylor spray the surface of DGA prior to compaction.

13:30 Brown begins placing forms along southern portion of the autoclave. Forms are laid out in order to comply with the 20-foot expansion joint spacing. An open slabe is left between each form to allow for expansion joints. Edges of slab and contact with existing concrete are lined with fiber expansion joints.

#4 Re-bar is being places approximately 3 inches from ground surface, at 12 inches on-center-each-way (OCEW).

15:00 Light to moderate rain begins to fall

Placement and compaction of DGA will continue on night shift.

Location: PCB Cells

No activity was noted

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

"A majority of the autoclave soil has been removed; Taylor is placing, spreading, and compacting dense graded aggregate (DGA) soil. Three (3) concrete forms and re-bar are in place along the south side of the autoclave and are ready for pouring.

Four concrete cylinders have been collected by Webb Concrete from the first truck of the day.

Each concrete delivery is being checked by the J. Threadgill (Construction Manager) for mix design.

7:15 Pouring of concrete begins on south side of autoclave

8:05 Taylor is using plate tamper and mini-excavator to compact DGA materail along the north slope.

9:00 Second concrete truck is on site.

Tarracon is on site to perform field testing for concrete parameters. The following tests were run on truck #2 of the day:

Golder Associates Inc.
3730 Chamblee Tucker Road
Atlanta, GA 30341 USA

Slump: 6.0 inches

Air Entrainment: 5.0%

Temp:

4 cylinders were poured for compressive strength testing (will be picked up the following day)

11:40 Schedule 80 PVC pipe is delivered to site; to be used to collect water from steam blow-down lines.

Taylor is connecting pipe and fittings, and trenching DGA in order to place pipe.

15:30 New concrete forms and rebar are being constructed in three (3) locations to prepare for pour on 8/22. D. Williams (Construction Manager) will be on site on 8/22 to observe activity.

16:20 Golder performs nuclear density gauge testing on newly-compacted areas on the east and north side of the autoclave. Light rain begins."

Location: PCB Cells

No activity was noted.

Location: CMT Borrow Area

Stripping of topsoil; chipper is currently down due to mechanical issues.

5.0 DISCUSSIONS / MEETINGS

Personnel Involved:	R. Brown (Brown Concrete), P. Callahan (Golder), Randy (Taylor), S. Patat (Taylor)
Location:	Autoclave
Topics Covered:	The Plant would like to run PVC lines to collect water from autoclave steam lines. The Plant recommends using schedule 80 PVC due to temperature of condensate. Golder recommends that the lines be placed within the DGA in order to avoid contact with concrete.

6.0 CQA TESTING PERFORMED ON-SITE

Location:	Autoclave
Test:	"Visual inspection of concrete forms, expansion joints, and re-bar placement.

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

Concrete has been poured along the south and west side of the autoclave. Compaction of DGA and forming of new slabs continues.

8:40 Concrete contraction joints have been cut on slabs poured on 8/21/2015. Brown is currently laying out and cutting contraction joints on slabs poured on 8/22/2015.

9:00 New concrete forms and rebar are being constructed in three (3) locations to prepare for pour this afternoon.

12:50 Discussion with E. Bennett regarding concrete testing schedule. Golder has recommended that Terracon be on site for the first concrete truck of each day. Terracon will not be available today for testing; therefore Golder has requested that Webb Concrete bring and slump cone to be tested by Golder.

14:00 Taylor is placing toe drain pipe, geotextile, and No. 57 stone.

16:15 First concrete truck arrives. Golder performs slump testing.

- Plate tampers for compaction of DGA

5.0 DISCUSSIONS / MEETINGS

Personnel Involved:	P. Callahan (Golder) and Randy (Taylor)
Location:	Autoclave
Topics Covered:	Taylor has asked for clarification on the toe drain system. Golder has instructed Taylor to place the 2-inch PVC; pipe may be cut and capped in areas where existing steam condensate lines interfere with the alignment. Golder clarifies that the drainage system should be placed 3 feet back from the wall, pipe should be approximately 1 inch higher than the top of the wall to promote drainage, surrounded by No. 57 stone, and wrapped with 6-ounce geotextile. Concrete will extend down the slope and extend 6-inches below the top of the existing wall.

6.0 CQA TESTING PERFORMED ON-SITE

Location:	Autoclave
Test:	Visual inspection of concrete forms, expansion joints, and re-bar placement. Concrete properties testing.

7.0 COMMENTS / ISSUES / OTHER

13:00 Discussion with R. Brown (Concrete Sub) and D. Williams (Construction Manager) regarding the expansion joint / slab spacing on the east side of the autoclave. Golder has approved a deviation in the expansion joint spacing to allow for sloping of the concrete surface for drainage. Eastern-most form will be approximately 14-feet wide, and the next two slabs will be extended to approximately 24-feet wide. Re-bar will be lapped by 2-feet.

8.0 PHOTOGRAPHS

- Slump: 5.75 inches
- Air Entrainment: 5.0%
- Temp: 77 F
- 4 cylinders were poured for compressive strength testing (will be picked up the following day)

14:30 Second concrete truck on site.

All deck slabs have been poured.

Location: Area E

11:15 P. Callahan and S. Moeller (Golder), L. Taylor and E. Bennet (Taylor), and D. Williams and J. Threadgill (Construction Managers) walk Area E and discuss wall alignment. Golder is currently updating the Area E wall detail and will provide to Taylor prior to footing excavation on Monday 8/31/2015.

Footing will be 18-inches wide and 12-inches deep. Footing should follow existing sidewalk and curb.

Location: PCB Cells

9:00 Disking of the PCB cells has begun. D. Williams (Construction Manager) has instructed Taylor to make several passes and "cross-disk" in perpendicular directions.

9:15 P. Callahan and S. Moeller visit PCB Cells. Disking is in progress. Golder recommends to Taylor that organic material and debris be stripped from the east and west boundaries. These areas have excessive rocks and branches.

Location: CMT Borrow Area

9:50 P. Callahan and S. Moeller visit CMT Borrow Area. A new chipper is being delivered and a truck is leaving the site with a load of chips.

5.0 DISCUSSIONS / MEETINGS

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

Concrete has been poured along the entire autoclave. Taylor is currently working to apply joint sealer in expansion and contraction joints. Silkaflex 1C is being applied with caulk guns.

9:00 Gutter subcontractor is on site to install gutter at autoclave.

Location: Area E

No activity noted.

Location: PCB Cells

Cells were rolled with a smooth-drum on Friday 8/28/2015, and area was inspected by Taylor after rain event on 8/30/2015.

Location: CMT Borrow Area

Taylor continues to prepare the borrow area and stormwater detention basin.

Contractor working on the soil screener to get it ready for use. The screener was delivered to site on 9/4/15. Contractor built a shelf for the screener SW corner of the site and also continued to build Dike along west limits to the drainage basin

Location: Groundwater Extraction System

Josh and Shawn went to look for the manhole across the tracks for the new well install but could not locate it with the coordinates given. Don't think it is there any longer. There is a cemented ditch along the railroad track that was installed in 2002 and suspect that is when the manhole was likely taken out.

0620 it was noticed from the field trailers that there was smoke in the borrow source area. Upon further investigation it was found that the chip pile was on fire. According to a Taylor employee who lives in the area he noticed smoke there on 9/5/15 but thought it might have been a nearby neighbor. Apparently the fire was reported to the fire department that same day.

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

No activity noted

Location: Area E

Contractor has 10 men onsite for concrete pour of the footer/6in part of the wall.

Contractor raising the rebar in the footer to the required 2/2.25in level below the top of the footer. Golder measured numerous areas along the south, east and northern limits. After inspection there were 3 areas that need to be raised and inch to a 1/2in. The SE and NE corners and an area near STA 3+75

1008am 1st cement truck arrived onsite. Truck mixed load for 5min and then slump/air entrain test performed both passed. Slump was 5in and air test was 5% along with a temperature of 79.4f. Five cylinders were collected by Terracon

Started pouring the footer in the NW (STA 1+13) corner and got to STA 3+32.

2nd truck arrived onsite @ 1105. Mixed load for 5min and Donn wanted testing to be performed on this truck also. Slump was 4in and the air test was 5.5% with a temperature of 79.5f.

2nd truck poured footer from STA 3+32 to STA 4+97 then went to the NW corner to STA 1+13 to start pouring the 6in portion of the wall. Truck 2 ended it pour at STA 4+36.

3rd truck arrived onsite with a 1yd load to get from STA 4+36 to STA 4+97 for the 6in portion of the wall where the water stop is located

Samples ID for truck one E1151124 and truck 2 sample ID E1151124 2

Location: PCB Cells

60 loads 10/05/15 for a total of 539 (there were 9 loads that got missed in the math on 9/17/15 that didn't get added in)

Continue to haul in sub-grade soil to PCB cell working along the North limits and finished off the 2nd bridge. Also contractor brought in a smooth drum roller for the DGA to compact both areas that were bridged

Golder was called to the PCB area to do some density testing by contractor. The south limits west of the south entrance was knocked down by the contractor and pushed over to the area where a depth check near the south entrance only had 2in of cover (Test DC-36)

Golder performed 4 density tests 9-12 in areas that were very close to previous tests that had failed

See attached map for test location for Density

Test PCB-9 very close to failed tests PCB-1

Test PCB-10 very close to failed tests PCB-2 & 7

Test PCB-11 is SW of failed test PCB-3 but I will perform another test closer to PCB-3 in the morning. Note that PCB-3 is surrounded by 3 passing test

Location: Area A

There was work completed by Randy's crew in Area A today but never got a chance to go see what they were doing.

However I believe they were prepping the area for concrete along the fence line where concrete is to be poured

Concrete contractor planning on working in that area for the next 2 days and pouring on Friday of this week

Location: CMT Borrow Area

Screening soil and sending it to the PCB cells

Apparently contractor had a fuel line break on the excavator that was loading the screen late morning. It is believed that they took 2 of the empty drums Golder had onsite to contain the fuel

Location: Groundwater Extraction System

Some of the drums to be moved had a little amount of water in the bottom likely b/c the lids were not tightened on and rain water possible got in. Josh Richards is onsite for GW sampling and said he would run the water through a carbon filter at the end of the week before they are disposed of in the roll off

Contractor continued to haul in sub-grade soil to PCB cell, working along the North and east limits.

Golder was called to the PCB area to do some density testing by contractor. Golder performed 4 density tests 13-16 in areas that were very close to previous tests that had failed and newly placed fill. See attached map for test location for Density.

Golder and Solutia witnessed Contractor perform X “pot hole” tests to verify thickness of subgrade soil. One test (previously measured at 2.0 inches) was still low; Contractor was informed and will place additional soil in area.

Golder informed Contractor that subgrade soil should extend to the liner limits on the north, west, and east sides of the PCB cells.

Golder, Golder Associates and the GA globe design are trademarks of Golder Associates Corporation

Liner crew arrived onsite at 0800. Spoke with Jimmy (Plastic Fusion superintendent) about the specs. Plastic Fusion did not have a copy of the specs or the CQA plan. Golder printed them out for Plastic fusion. Golder pointed out a few things that are different. Archiving the trial seam, informed him of the 3 peel and 3 sheer tests, no equipment to be on the liner. Basically went through the specs with him

Tony (PM Plastic Fusion) and Ellis onsite around 1300. Ellis wanted to move the anchor trench 2 more feet to the north for more staging area. I informed him that was unlikely and called Steve to confirm.

Also informed Tyler/Ellis that the anchor trench would need to be extended on the SE and SW corner. SW corner will not be much approx. 20ft. Waiting until they have sub-grade in on the east side to see how far the SE anchor trench needs to be extended. Can measure out the panel widths once the sub-grade is in because liner crew not exactly sure yet how they are starting the east side

Taylor wanted to start liner on the west side of the cells but as was stated before that would block them off to the east

Started anchor trench late afternoon SE corner of site 18in wide by 6in deep. Contractor could not find a 12in bucket

Anchor trench to be excavated 6ft from the south side of the anchor trench to the limits

Golder informed contractor site would need to be re-rolled due to the rain over the weekend which caused some rutting and exposed some small stones that just need to be pushed down into the sub-grade

Location: Area A

Poured area along the fence north of the main gate. 3 trucks for a total of 24.5yds. 5 cylinders were collected for samples on each of the first 2 trucks.

Sample ID’s are E1151124 10/12/15 and E1151124 10/12/15 (2)

Contractor is planning on pouring the first 120ft of wall from the SW limits working east on 10/20/15

Location: PCB Cells

46 loads total of 851 as of end of day 10/15/15 (there were 9 loads that got missed in the math on 9/17/15 that didn't get added in)

Golder Associates Inc.
3730 Chamblee Tucker Road
Atlanta, GA 30341 USA
Tel: (770) 496-1893 Fax: (770) 934-9476 www.golder.com

Golder Associates: Operations in Africa, Asia, Australasia, Europe, North America and South America

Golder, Golder Associates and the GA globe design are trademarks of Golder Associates Corporation

Morning continue to place sub-grade NE corner

Had contractor add sub-grade to the north limit the soil was not out to the flags

NOTE: survey limits show the liner on the exit road…..are we going to be doing that????

Surveyors onsite shooting the grades and also flagging limits mid-morning

1040am START deploying liner.

Deployed all day along with seaming and pressure testing. Approximately 53,450 square ft deployed and pressure tested

Location: Area A

Started fence post install. According to Josh the fence company was performing work in Area A without a hot work permit nor an excavation permit

Location: CMT Borrow Area

Continue to screen material for PCB cells also worked on screen and started to stockpile soil

Location: Groundwater Extraction System

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

No activity

Location: Area E

No activity

Location: PCB Cells

Begin deploying panel 13 at 0750 east side of site working west.

Early afternoon had to add water to the sub-grade and smooth drum roll. There were some small rocks at the surface west of panel 19. Wind has been blowing off the surface soil and exposing small rocks. Just need to stay on top of it. Golder informed Ellis of this

Golder Associates Inc.
3730 Chamblee Tucker Road
Atlanta, GA 30341 USA
Tel: (770) 496-1893 Fax: (770) 934-9476 www.golder.com

Golder Associates: Operations in Africa, Asia, Australasia, Europe, North America and South America

Golder, Golder Associates and the GA globe design are trademarks of Golder Associates Corporation

Deployed panels 13-26 for a total of 78,450 ft2

Marked destructs 7-13 for fusion and all seams have been pressure tested

Of not we have had on one pressure test that wouldn't hold air and it was at a butt seam. I have to say that is very good quality

Building forms along north limits area A

1st truck came in slump was tested they started pouring a section but the air entrain failed at 4%. Did a retest still only 4.3%. Finished that one section sample that load and Josh sent the truck offsite

Location: CMT Borrow Area

Repair silt fence near basin

Location: Area C&D

Started Geocell install SE corner top of slope. Golder informed Ellis that it doesn't look like they have the geocell out far enough in the anchor trench. Also informed Josh of this but will get with Steve before the weekly meeting to confirm

Repaired washout from the rain will take a couple of density tests on 11/11/15 after it has been compacted

14 truckloads of DGA for the 6in base for a total of 264 as of end of day 11/10/15.

No activity

Location: PCB Cells

Contractor continues to haul in cover soils from CMT Borrow Area. Contractor has now completed a 3-foot access road from the entrance gate to exit. Low-ground pressure dozers are being used to spread cover soil material. Two haul trucks were utilized before approximately 11:00am, however only one was in operation from 11:00 to 14:30.

Work is being done to reinforce entrance and exit haul roads. Stone is brought in and graded to cover muddy/washed out sections.

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

No activity

Location: Area E

Concrete Contractor worked to finalize rebar placement and prepared forms for footing pour. The 4-inch ADS outlet pipe is in place at Station 0+00. Taylor verified drain height and confirmed it was within 1/8-inch of design elevation.

At 10:35 first concrete truck on site for footing pout. Terracon is also on site for concrete QA testing (Slump = 2.75", Air = 5.25%, Temp = 74 F). A total of 2 trucks made concrete delivery. Concrete poured in footing from approximately station 1+10 to 0+00.

Location: PCB Cells

Contractor continues to haul in cover soils from CMT Borrow Area. Contractor has now completed a 3-foot access road from the entrance gate to exit. Low-ground pressure dozers are being used to spread

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

No activity

Location: Area E

At 8:15 Acker Electrical is on site to install two new light pole foundations. Taylor has provided Acker with the target foundation elevation, and depth of augering based on final grade elevation. Taylor and Acker excavated and augered two locations (each location was probed and hand-augered for utility clearance). A 7-foot rebar cage and Sonotube was lowered into the excavation, top of sonotube was surveyed by Taylor.

Location: PCB Cells

Contractor continues to haul in cover soils from CMT Borrow Area. Contractor has now completed a 3-foot access road from the entrance gate to exit and is now working off of road extending east down the middle of the PCB Cells. Low-ground pressure dozers are being used to spread cover soil material.

Location: Area C&D

Cont backfilling geocells east limits. Informed dozer operator/Randy there is a couple of areas where the DGA might extend to far for the rip rap

For a total of 157,700ft2 12/08/15

DGA loads 12/07/15= 12 for a total of 490 as of 12/10/15

Location: Groundwater Extraction System

Could not find piping near IW13 that goes across road to the plant. Spoke with Steve he found a different drawing that showed the pipes 109ft west of IW13. Excavated in that area could not find them so the contractor continued east words excavating 2ft deep and probing below. Contractor found 2 pipes approx. 4ft BGS 65ft west of IW13 and 24ft south of the fence line.

The pipes that have been found are 2'10in and 3'6in BGS

Still have not found the 3rd line yet

Also all areas were backfilled except where the 2 pipes are located

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

No activity

Location: Area E

Formwork and rebar installation at wall around north and east sides of future control building (approximately 120 LF).

Location: PCB Cells

Placing of cover soil along northeastern side of PCB Cells.; Taylor has started to wreck out access road along middle of cells.

Southern half of PCB Cells have been hydroseeded. Subcontractor has confirmed that seed mix is "ALDOT Winter, frequent mowing mix". Straw cover is being spread by hand.

Loads of cover fill on placed on PCB Cells = 17 (no cover soil moved 1/13 – 1/17, heavy rain on 1/15, light rain on 1/17);

Golder Associates Inc.

Screening cover soils.

Location: Area C&D

No Activity

Location: Groundwater Extraction System

Randy's crew is currently beginning work at property north of the plant site (IW-26 and IW-27). Excavation around wells and installation of well vaults. Carbon treatment enclosure was installed and delivered to site on 1/15.

5.0 DISCUSSIONS / MEETINGS

Personnel Involved:	Steve, Kevin, Patrick
Location:	IW26 and IW27
Topics Covered:	Golder has approved Taylor to orient the vaults so they will be facing each other. A second hole will be drilled in each vault to pass the conveyance line through the concrete, rather than over-excavating and running the line under the vault. Conveyance line will extend from each vault and join together into one excavation towards the treatment shed.

Loads of topsoil delivered to site = 0;

Location: Area A

Brown Concrete crew is installing wood formwork and rebar within the footers of Vault #1 and Vault #2. Concrete pour is scheduled for 9:00am on 2/2/16.

Location: CMT Borrow Area

New screener is on site, limited screening of material but nothing hauled to PCB Cells. Taylor is currently using a 1-inch screen; if larger screen is changed out, Golder requires that oversized material be picked by hand.

Location: Area C&D

No Activity

Location: Groundwater Extraction System

Randy's crew has installed approximately 350 feet of 2-inch HDPE running from the carbon enclosure to the AWWSB tie-in. As of 2/1/16, there is approximately 100 feet left to trench/install.

Randy's crew continued to break up concrete and install 2-inch HDPE, leaving the pipe stubbed out near the man-hole tie in. A majority of the pipe is now in place. Randy's crew is also cleaning up excavated material and placing into roll-off.

Sonny's crew is now on site and are working on the carbon enclosure piping. Two carbon drums and bag filter have been delivered today.

5.0 DISCUSSIONS / MEETINGS

Personnel Involved:	Donn Williams, Patrick Callahan, Josh Threadgill
Location:	PCB Cells
Topics Covered:	A water bubble was encountered near the proposed location of the access road cul-de-sac by Tyler (Taylor Corp.) on 1/30/16. This area had been covered by cover soil the week of Jan 17, and the bubble was identified as topsoil was being placed in the area. Water was noted as coming out from under the liner in the NE corner of the cell, and a large amount of water rushed out when pressure was applied to the bubble via the low ground pressure dozier.

Loads of topsoil delivered to site = 0;

Location: Area A

Brown Concrete crew is installing wood formwork and rebar within the footers of Vault #1 and Vault #2. Concrete pour is scheduled for 9:00am on 2/2/16.

Two concrete trucks delivered material for footer and Area E NW corner. Ticket numbers 115666 (9 yards) and 115679 (1 yard) were delivered. Slump: 4.0 inches, Air: 5.5%, Temp: 66.1F, 5 cylinders poured for compressive strength testing.

Location: CMT Borrow Area

New screener is on site, limited screening of material and hauling to PCB Cells. Taylor is currently using a 1-inch screen.

Location: Area C&D

No Activity

Location: Groundwater Extraction System

K. Killoran and P. Callahan observed the vault installed at IW-14. The conveyance pipe and electrical conduit are currently running on top of one another. Littleton will need to re-align conduit within vault to allow for adequate room to install flow meter.

Randy's crew has installed approximately 380 feet of 2-inch HDPE leaving the pipe stubbed out near the man-hole tie in. A majority of the pipe is now in place. Randy's crew is also cleaning up excavated material and placing into roll-off.

Sonny's crew is working on the carbon enclosure piping.

K. Killoran, D. Williams, and E. Bennett review plan to identify piping near IW-13, IW-2, and south landfill wells. Proposed to run water through lines to identify which lines are connected to each well. Taylor will provide a change order to Solutia for replacement of piping in the area.

5.0 DISCUSSIONS / MEETINGS

Personnel Involved:	Donn Williams, Patrick Callahan, Josh Threadgill, Ellis Bennett, Robbie Brown
Location:	Area A vault retaining walls
Topics Covered:	The fiber expansion joints will not be used between new concrete and existing concrete walls in Area A. Robbie has indicated that this is not standard practice due to the fact that soil on the back side of footer will provide room for expansion.

6.0 CQA TESTING PERFORMED ON-SITE

Location:	North-central portion of PCB Cells Area A Vaults footers

Location: Groundwater Extraction System

Sonny's crew has begun excavating and exposing conveyance piping within the SMWU-I treatment system at the South Landfill. The conveyance pipes were previously exposed as part of the flow meter vault installation in December, however activity was halted due to leaking lines. Sonny's crew exposed three 2-inch HDPE pipes, and are preparing the area for pump testing. Jerry Hopper has locked out pumping system.

Lance T. and Ellis B. were on site with their piping supplier to inspect the 24-inch wells and come up with a design for valves.

Location: Area C&D

No Activity

Location: Groundwater Extraction System

Sonny's crew exposed three 2-inch HDPE pipes on 2/8/16, and are preparing the area for pump testing. Materials were delivered to site in order to hook up the water truck to the manifold near IW-10, and the sampling port on IW-2. A pump test was conducted on the SWMU-1 system with oversight from Tom Collins. Allen Hall and Mark Knighton are within the plant to observe any water flowing out of the system and into the wet well.

The first test was conducted by hooking the water truck up to the IW-10 manifold. Green dye was placed in the lines in order to identify pump test water. No water was observed flowing through the exposed lines, however water was seen flowing through the disconnected output line in IW-13. The line within IW-13 was re-connected, and dyed water was then observed bubbling to surface at the existing leak spot.

A second test was conducted by hooking the water truck up to IW-2. After pumping, water came flowing out from excavation sidewall, north of the exposed lines. No water was observed down to Manhole #8.

Sonny's crew plans to excavate near the leaking sections of pipes to expose the break / damage. A new pump test will be completed on 2/10.

Location: Groundwater Extraction System

Sonny's crew is working to excavate near the leaking sections of pipes identified on 2/9 pump test to expose the broken / damaged sections of pipe. Three pipes have been exposed to the SE of 2/9 excavation and the pump truck will be connected directly to these lines.

1. The pump truck was connected to the center line. A gash was identified in this line and it is assumed that it is connected to the manifold. Water pressure was applied to the line and no flow was observed.

2. The pump truck was connected to the easternmost line. Flow was observed coming to the surface near the Alimet Dike.

3. The pump truck was connected to the westernmost line. Flow was again observed coming into the north sidewall of the 2/9 excavation.

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

No activity

Location: Area E

Robbie Brown’s crew is beginning to install formwork for wall pour. The footing form is being removed.

Location: PCB Cells

Inspection of BMPs after heavy rain on 2/15 identified several locations of repair along the north and northeast perimeter of the PCB Cells. Although most silt fence intact, several locations are leaning over or have a significant amount of silt built up behind them; Jason will address and repair BMPs.

Flow from the seep area has been noted to be the same as the previous week.

PCB cells are too wet for work.

Location: CMT Borrow Area

Borrow area is too wet for screening.

Location: Area C&D

No Activity

Location: Groundwater Extraction System

Sonny's crew is beginning excavation to expose the leaking pipe near the Alimet Dike. At a depth of approximately 1 ft-bgs, dyed water is entering the excavation. Pumps and sediment bags are being implemented to manage water. A small containment dike has been constructed to hinder flow of sediment.

The excavation has been dug to approximately 4 ft-bgs immediately next to the Alimet Dike. At 9:30 a water truck is being mobilized to the S. Landfill to pump water into the conveyance line (Taylor hopes this will help identify the exact location of the damaged line). After pumping, dyed water was observed infiltrating from the north side of the excavation, from under the pipe rack foundation. John L and Donn W. are on site to observe progress. Donn W. has ordered that excavation be stopped and no further searching for the conveyance line. Golder and Taylor will explore options for delivering a frac tank to site for temporary storage.

Tyler's crew continues to work on pad foundation for SW vaults in Area A. Based on Golder's instruction, 1 union valve was raised by approximately 2" to avoid contact with the concrete pad. A 2" hole was also drilled into the side of the existing drainage manhole to allow for drainage of surface water around the pump foundation. Because the pump foundation is slightly lower than the existing vault wall, Taylor recommended a secondary drainage location so the pad does not hold water.

At 8:15 Robbie Brown's crew is working to install wall footing formwork around vault.

Location: CMT Borrow Area

Material is being screened and stockpiled.

Location: Area C&D

No Activity

Location: Groundwater Extraction System

Sonny's crew spent most of the morning gathering parts and fittings to connect the conveyance piping to the frac tank. Based on Kevin K's recommendation, the three exposed lines will be extended vertically out of the ditch, backflow preventers and valves installed, combined, and directed towards the tanks.

As a check of the overall system, Golder has recommended running water through IW-13, IW-2, and the manifold. Three pump tests were performed:

1. Water was pumped through IW-2 and was observed coming out of the westernmost pipe, as expected.
2. Water was pumped through the manifold and was observed coming out from the tee connection and flowing back uphill in the middle line, in the opposite direction as originally estimated.
3. Water was pumped through IW-13 and was observed coming out from the tee connection and flowing back uphill, in the opposite direction as originally estimated. Due to the direction of flow out of IW-13 and the manifold system, the collection pipes were reversed in the middle conveyance line.

RA construction team has received approval to move frac tanks into place at the S Landfill. Excavator is being used to pull tanks into place on laydown pad.

Sonny's crew spent most of the morning installing fittings, valves, and backflow preventers to connect the conveyance piping to the frac tank.

A temporary line was run from the IW13/Manifold line (center line) to the frac tank in order to identify flow though the manifold system of individual wells. Allen Hall's crew have uncovered the manifold and will be present with Jerry H. Water is being pumped through individual interceptor wells, and the backflow preventers on each manifold line are being marked to identify which well they are hooked up to.

4.0 SUMMARY OF ACTIVITIES

Location: Autoclave

No activity

Location: Area E

The concrete footer was poured on 2/11/16

Location: PCB Cells

Taylor is working on the construction of the access road. 10 oz geotextile and DGA is being placed. Excess soil material is being removed near the entrance.

Location: Area A

A majority of the area has been disc'ed and has been holding up well with the recent rain. There is one low spot north of the easternmost vaults that is holding water and has become muddy. Golder recommends bridging in this area.

Golder Associates Inc.
3730 Chamblee Tucker Road
Atlanta, GA 30341 USA
Tel: (770) 496-1893 Fax: (770) 934-9476 www.golder.com

Golder, Golder Associates and the GA globe design are trademarks of Golder Associates Corporation

Guy wires along western boundary have been raised, and AT&T is on site to raise the telecom fiber pedestal.

One “sinkhole” has been identified adjacent to the easternmost vault. The area is a depression in the ground that has been eroded from recent rain; site drawing from Tom Collins indicate that the location is a abandoned manhole/basin inlet. Donn has directed Taylor to excavate the area. An open pipe and manhole was discovered. The excavation was backfilled with a reinforcing geosynthetic, riprap, and concrete.

The westernmost vault footing has been poured.

Location: CMT Borrow Area

Material is being screened and stockpiled. Taylor has agreed to cut the floor of the borrow area to a 2% grade, but has not started significant excavation along the floor.

Location: Area C&D

No Activity

Location: Groundwater Extraction System

The vacuum truck operator is on site to begin draining water from the frac tanks. Today they will focus on draining the northern tank. The truck made 8 trips today, and removed everything with the exception of 7 inches of water.

Sonny’s crew continues to install well pipe, wiring, well cap, and valves within IW-26 and IW-26 well vaults.

APPENDIX V3

Weekly Progress Meeting Reports

Weekly Update Meeting July 22, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday July 18 is 974 hours. Daily safety meetings are being held each morning for all Construction Employees on site.

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of July 13, 2015

- Completed installation of BMP's at the PCB Cells (678 LF of Type A Silt Fence, and 720 LF of Wattles were installed).
- Clearing and Grubbing was completed at the PCB Cells (A total of 27,649. SF has been cleared)
- Existing grades were verified by a Surveyor, and the limits of the PCB Cells were marked

Work in progress for the week of July 20, 2015

- Clearing and Grubbing began at the Borrow Site
- Access Road to the PCB Cells is being installed
- Herbicide was sprayed today at the PCB Cells
- Fence was removed on the Southwest corner of the PCB Cells, and 288' temporary fence has been installed

Work anticipated for the next two weeks

- Finish up Clearing at the Borrow Site
- Begin Stripping topsoil at the Borrow Site
- Begin Installing BMPs at Borrow Site

- Complete PCB Cells Access Road
- Disk and Roll the PCB Cells
- Areas that will require bridging in the PCB Cells will be identified

Opportunities

Final Pours and Methods Plan for the Autoclave will be submitted on Friday July 24, 2015 for review by Golder and Solutia.

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project, but no weekend work has taken place to date.

Weekly Update Meeting July 29, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday July 25 is 1205 hours. Daily safety meetings are being held each morning for all Construction Employees on site.

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of July 20, 2015

- Clearing and Grubbing at the PCB Cells was completed
- Herbicide was sprayed at the PCB Cells
- Access Haul road to the PCB Cells began
- Clearing at the Borrow Pit began
- Final Pours and Methods Plan for the Autoclave was submitted

Work in progress for the week of July 27, 2015

- Clearing and Grubbing at the Borrow Pit is on-going
- Access haul road to the PCB Cells will be complete
- Grass that is not dying in the PCB Cells will be re-sprayed with herbicide

Work anticipated for the next two weeks

- Begin Stripping topsoil at the Borrow Site
- Begin Installing BMPs at Borrow Site
- Begin installing sediment basin at the Borrow Site

- Disk and Roll the PCB Cells
- Areas that will require bridging in the PCB Cells will be identified

Opportunities

Autoclave Pour Plan has been submitted, and will be discussed

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project, but no weekend work has taken place to date.

Weekly Update Meeting August 5, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday July 25 is 1565 hours. Daily safety meetings are being held each morning for all Construction Employees on site.

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of July 27, 2015

- Clearing and Grubbing was on going in the borrow pit
- 24" CMP was installed on the PCB Access Road
- PCB Cells Access Road was complete
- Grass was re-sprayed with Herbicide

Work in progress for the week of July 27, 2015

- Clearing and Grubbing at the Borrow Pit will be complete
- Decon Pad at PCB Cells will be complete
- Decon Pad at Construction Gate will begin
- Will observe the PCB Cells to verify grass is ready to be disked and rolled
- Tractor and Disk will mobilize to site
- Erosion Control began at Borrow Site

Work anticipated for the next two weeks

- Continue Erosion Control in Borrow Pit
- Begin Stripping Topsoil at Borrow Pit

- Begin Sediment Basin in Borrow Pit
- Autoclave work will begin on August 17, 2015
- Disk and Roll PCB Cells
- Areas that will require bridging at PCB Cells will be identified

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project, and will take place during the Autoclave Work.

Weekly Update Meeting August 12, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday August 8, 2015 is 1805 hours. Daily safety meetings are being held each morning for all Construction Employees on site. Safety Topics at the daily safety meetings last week included the following:

8/3 Personal Hygiene

8/4 Equipment Safety

8/5 Environmental Hazards

8/6 Communication

8/7 Back to School Hazards

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted. However, last week two traffic signs were stolen, these signs are in the process of being replaced.

Work completed week of August 3, 2015

- Clearing and grubbing was on going in the Borrow Pit
- Decon Pad at the PCB Cells was complete
- Decon Pad at the Construction Access Gate was started
- Began installing Erosion Control at the Borrow Pit

Work in progress for the week of August 10, 2015

- Clearing and grubbing at the Borrow Pit will be complete
- Erosion control at the Borrow Pit will continue

- Begin stripping topsoil at Borrow Pit
- Begin Sediment Basin at Borrow Pit
- Complete Decon Pad at Construction Access Gate
- Begin Mobilizing for Autoclave Construction

Work anticipated for the next two weeks

- Disk and Roll PCB Cells
- Areas that will require bridging at PCB Cells will be identified
- Begin screening dirt for the PCB Cells
- Autoclave work will begin on August 17, 2015

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project, and will take place during the Autoclave Work.

Weekly Update Meeting August 19, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday August 15, 2015 is 2105 hours. Daily safety meetings are being held each morning for all Construction Employees on site. Safety Topics at the daily safety meetings last week included the following:

8/10 Jobsite Traffic

8/11 Site Acclimation

8/12 Equipment Safety

8/13 Jobsite Hazards

8/14 PCB Awareness

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of August 10, 2015

- Decon Pad at the Construction Access Gate was completed
- Continued Installing Erosion Control at Borrow Pit
- Began Stripping Topsoil at Autoclave
- Tub Grinder Mobilized to Begin Grinding Trees at Borrow Pit
- Began Mobilizing for work at Autoclave

Work in progress for the week of August 17, 2015

- Tree Grinding is ongoing at Borrow Pit
- Installing Erosion Control is ongoing at Borrow Pit

- Topsoil Stripping at Borrow Pit is ongoing
- Autoclave Excavation Complete
- Installing Dense Grade Base at Autoclave
- Begin Concrete Work at Autoclave

Work anticipated for the next two weeks

- Disk and Roll PCB Cells
- Areas that will require bridging at PCB Cells will be identified
- Autoclave work will be Complete
- Begin Excavation for wall at Area E
- Complete the sediment basin at Borrow Pit

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project, and will take place during the Autoclave Work.

Weekly Update Meeting August 26, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday August 22, 2015 is 3205 hours. Daily safety meetings are being held each morning for all Construction Employees on site. Safety Topics at the daily safety meetings last week included the following:

8/17 Weather/Site Access and Control

8/18 Site Spotters

8/19 Slips, Trips, and Falls

8/20 Caught Between

8/21 Lead By Example

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been three rain events to date over ¾ of an inch, and the BMP's have held up through each of them. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of August 17, 2015

- Tree Grinding at Borrow Pit was halted due to equipment failure
- Erosion Control continued in Borrow Pit
- Topsoil Stripping was on going in Borrow Pit
- Autoclave Excavation was complete
- Dense Grade Base was complete in Autoclave
- Concrete Placement Began at Autoclave

Work in progress for the week of August 24, 2015

- Tree Grinding will begin back
- Installing Erosion Control is ongoing at Borrow Pit
- Topsoil Stripping at Borrow Pit is ongoing
- Concrete Work at Autoclave is ongoing and will be complete on Saturday
- PCB Cells will be Disked and Rolled
- Areas that will require bridging will be identified

Work anticipated for the next two weeks

- Begin Excavation for wall at Area E
- Begin screening dirt at Borrow Pit
- Begin Hauling Dirt to PCB Cells

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project, and will take place during the Autoclave Work.

Weekly Update Meeting September 2, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday August 29, 2015 is 4141 hours. Daily safety meetings are being held each morning for all Construction Employees on site. Safety Topics at the daily safety meetings last week included the following:

8/25 Backing in Trucks

8/26 Material Handling

8/27 The Different Levels of Protection

8/28 When to Use Hearing Protection

8/29 Splash Protection

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been three rain events to date over ¾ of an inch, and the BMP's have held up through each of them. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of August 24, 2015

- Tree Grinding at Borrow Pit began again
- Erosion Control continued in Borrow Pit
- Topsoil Stripping was on going in Borrow Pit
- Autoclave Concrete Work was completed
- Joint Sealing in the Autoclave Area Began
- PCB Cells was disked and rolled
- Areas that will require bridging was identified
- Area E was sprayed with Herbacide

Work in progress for the week of August 31, 2015

- Tree Grinding is ongoing in Borrow Pit
- Installing Erosion Control is ongoing at Borrow Pit
- Sediment Pond Piping will be installed at Borrow Pit
- Screen will be mobilized at Borrow Pit
- Gutters will be installed at Autoclave

Work anticipated for the next two weeks

- Begin screening dirt at Borrow Pit
- Begin Hauling Dirt to PCB Cells
- Area E Wall will be prepped for concrete
- Begin Concrete Footer for Area E Wall

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting September 9, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday September 5, 2015 is 4414 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

8/31 MSDS

9/1 Underground Utilities

9/2 Roadway Safety

9/3 Hearing Protection

9/4 Holiday Weekend Home Safety

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been three rain events to date over ¾ of an inch, and the BMP's have held up through each of them. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of August 31, 2015

- Tree Grinding at Borrow Pit was completed
- Erosion Control continued in Borrow Pit
- Topsoil Stripping was ongoing in Borrow Pit
- Sediment Basin Structure and Pipe was installed
- Joint Sealing in the Autoclave Area was complete
- Gutters were installed in Autoclave Area

Work in progress for the week of September 7, 2015

- Installing Erosion Control is ongoing at Borrow Pit
- Haul Road will be installed to access Borrow Pit
- Screen is mobilized and material will begin being screened
- Screened Material will begin being placed at the PCB Cells
- Area E wall will be dug out for footer
- Dense Grade Base will be installed for the footer

Work anticipated for the next two weeks

- Screen Dirt for PCB Cells
- Haul Dirt to PCB Cells
- Area E Wall will be prepped for concrete
- Begin Concrete Footer for Area E Wall

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting September 16, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday September 12, 2015 is 4746 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

9/7 No Work due to Labor Day Holiday

9/8 Mental Distractions and Inattention

9/9 Poor House Keeping

9/10 Machinery

9/11 Safety with Machine Guards: Basics and Proper Use

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been three rain events to date over ¾ of an inch, and the BMP's have held up through each of them. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted. The chip pile located in the Borrow Area did catch fire either by spontaneous combustion or by arson. The fire began on Saturday September 5, 2015, but was not noticed by employees associated with the OU-3 work until returning to work after the Labor Day Holiday on Tuesday September 8, 2015. Local Fire Department responded on September 5th, 6th, and 7th, but they assumed that the fire was intentionally set. After being notified, Taylor Corporation provided overnight fire watch on September 8th and 9th. The fire was extinguished on September 10th. Nothing was damaged by the fire.

Work completed week of September 7, 2015

- Erosion Control continued in Borrow Pit
- Topsoil Stripping was ongoing in Borrow Pit
- Screen was mobilized at Borrow Pit
- Haul Road was installed to access Borrow Pit
- Screened Material began being hauled to PCB Cells
- Preparation began for Area E footer
- Dense Grade Base was installed for Area E Wall Footer

Work in progress for the week of September 14, 2015

- Screening dirt for PCB Cells
- Hauling screened dirt to PCB Cells
- 40 mil Geomembrane is being delivered
- Preparation for Concrete at Area E will be finished this week
- Footer and Wall for Area E wall will begin being formed and poured

Work anticipated for the next two weeks

- Screen Dirt for PCB Cells
- Haul Screened Dirt to PCB Cells
- Concrete for Area E Wall and Footer will continue being poured
- Begin work in Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting September 23, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday September 19, 2015 is 5402 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

9/14 Weather and Erosion and Sediment Control

9/15 Powerlines and Dust Control

9/16 Awareness of Surroundings

9/17 PPE

9/18 Poor Housekeeping

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been three rain events to date over ¾ of an inch, and the BMP's have held up through each of them. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of September 14, 2015

- Erosion Control continued in Borrow Pit
- Topsoil Stripping was ongoing in Borrow Pit
- Screened Material began being hauled to PCB Cells
- Digging out for Area E footer was complete
- Dense Grade Base was complete for Area E Footer
- Form work for Area E Footer and Wall Began
- Weather Station at Area A was taken down

- 40 mil Geomembrane was delivered

Work in progress for the week of September 21, 2015

- Haul Screened Dirt to PCB Cells
- Continue Forming and Pouring Area E Wall
- Continue Preparing Area A for Concrete

Work anticipated for the next two weeks

- Screen Dirt for PCB Cells
- Haul Screened Dirt to PCB Cells
- Concrete for Area E Wall and Footer
- Continue Preparing Area A for concrete

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting September 30, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday September26, 2015 is 6215 hours inclusive of subcontractors. Daily safety meetings are being held each morning for all construction employees on site. Subcontractors are given tailgate safety meetings prior to starting work. Safety topics at the daily safety meetings last week included the following:

9/21 Basic Safety & Health Rules

9/22 Blood Borne Pathogens (BBP)

9/23 Construction, Safety Stand Down

9/24 Death, Workplace Related

9/25 Driving Safety

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been three rain events to date over ¾ of an inch, and the BMP's have held up through each of them. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

On September 24, 2015, the concrete subcontractor ignited a small patch of grass in Area E while cutting rebar. The fire was quickly extinguished, and they were instructed to use a fire cloth and keep their fire extinguisher next to the work area.

Work completed week of September 21, 2015

- Erosion Control continued in Borrow Pit
- Topsoil Stripping was ongoing in Borrow Pit
- Screened Material was hauled to PCB Cells
- Form work for Area E Footer and Wall was On-Going
- Conduit in Area E was lowered where it interfered with footer
- Preparation for Area A slab on grade began
- Temporary Fence was installed in Area A
- Chain link Fabric was removed from southern portion of Area A Fence

Work in progress for the week of September 28, 2015

- Haul Screened Dirt to PCB Cells
- Erosion Control in Borrow Pit will be complete
- Continue Forming and Pouring Area E Wall
- Continue Preparing Area A for Concrete
- Begin Forming Area A for Concrete

Work anticipated for the next two weeks

- Haul Screened Dirt to PCB Cells
- Bridge areas at the PCB Cells
- Complete final elevations, compaction and moisture testing of subgrade at the PCB Cells
- Concrete for Area E Wall and Footer
- Continue Preparing Area A for concrete
- Begin Pouring Area A Concrete Slab
- Re-Install Fence along Southside of Area A
- Remove next section of Chain Link Fabric in Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected to make up for rain delays.

Weekly Update Meeting October 7, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday October 3, 2015 is 6750 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

9/28 Truck Traffic

9/29 Dust Control

9/30 Construction Safety

10/1 Erosion Control

10/2 Trench Safety

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been five rain events to date over ¾ of an inch, and the BMP's have held up through each of them. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted. There was one other incident reported, the sparks generated from our subcontractor cutting rebar started a small fire on the dead grass in Area E. The fire was extinguished before any damage was caused to any person, property, or equipment.

Work completed week of September 28, 2015

- Erosion Control was finished in Borrow Pit
- Topsoil Stripping was ongoing in Borrow Pit
- Screened Material was hauled to PCB Cells
- Form work for Area E Footer and Wall was On-Going

- Guy Wire and Grounding Rod was raised in Area E to allow room for dirt fill
- Guy Wire was removed in Area A, and Grounding Rod was raised to allow room for concrete cover system
- Preparation for Area A slab on grade began

Work in progress for the week of October 5, 2015

- Finishing up first layer of 6" screened material in PCB Cells
- Will be pouring the first section of Concrete Footer in Area E
- Continue Preparing Area A for Concrete
- Begin Forming Area A for Concrete

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Liner Subcontractor will Mobilized and begin work in PCB Cells
- Continue Forming and Pouring Area E Wall
- Continue Preparing Area A for concrete
- Begin Pouring Area A Concrete Slab
- Extensions for PIV's and Fire Hydrant will be installed in Area A
- Re-Install Fence along Southside of Area A
- Remove next section of Chain Link Fence in Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting October 14, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday October 10, 2015 is 7840 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

10/5 Hot Work

10/6 Slips and Falls

10/7 Overhead Line and Utilities

10/8 Spotter Communication

10/9 Good Housekeeping

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been six rain events to date over ¾ of an inch, and the BMP's had to be repaired after the last rain event in a several locations. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of October 5, 2015

- Screened Material was hauled to PCB Cells
- Topsoil Stripping and stock piling was ongoing in Borrow Pit
- Screened Material was hauled to PCB Cells
- First Pour of Eastern and Northern side of Area E footer was poured
- Forming and Pouring of Area A Slab on Grade began

Work in progress for the week of October 12, 2015

- Finishing up first layer of 6" screened material in PCB Cells, which was not able to be complete over the weekend due to rain events
- Liner will begin being placed in PCB Cells
- Forming and tying steel in Eastern and Northern Wall Pour in Area E
- Preparation for Valve Extensions in Area A
- Knuckled Fence will be installed along the southern section of Area A
- Next 200' of Poles will be driven for future Area A Fence
- Pouring of Area A Concrete Slab will Continue

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Liner Subcontractor will be installing liner at the PCB Cells
- Concrete for Area E Wall and Footer
- Continue Preparing Area A for concrete
- Extensions for PIV's and Fire Hydrant will be installed in Area A
- Continue Pouring Area A Slab on Grade
- Herbicide Area A to prepare for fill

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting October 21, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday October 17, 2015 is 8802 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

10/12 Fire Extinguisher Inspection

10/13 Hydration in Cold Weather

10/14 Housekeeping and Equipment

10/15 Daily Inspections of Equipment

10/16 Slips and Falls

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been six rain events to date over ¾ of an inch, and the BMP's had to be repaired after the last rain event in a several locations. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of October 12, 2015

- First 6" Layer of Screened Material was complete at PCB Cells
- Installation of Liner Began at PCB Cells
- There was a new Gate installed to access the PCB Cells from the South East Corner
- Topsoil Stripping at Borrow Pit was complete
- Steel Tying and Formwork was conducted for Eastern Section of Area E Wall

- First South to North Section of Area A Slab on Grade was complete
- Fence was reinstalled on southern section of Area A
- Fence Post were installed for the next 200' of fence in Area A
- Temporary Fence was relayed for next Section of Area A Slab on Grade
- Herbicide was sprayed in Area A below Slab on Grade Area

Work in progress for the week of October 19, 2015

- Liner will be placed at the PCB Cells
- Material will be screened and stock piled at the Borrow Pit
- Eastern and Northern Wall of Area E will be poured
- Western side of Area E Footer will begin being formed
- Next Section of Area A will be prepped for Slab on Grade

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Liner Subcontractor will continue installing liner and geocomposite at the PCB Cells
- Concrete for West side of Area E Footer
- Continue Preparing Area A for concrete
- Continue Pouring Area A Concrete Slab on Grade
- Fence will be installed in Area A as we finish Concrete Slab on Grade

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting October 28, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday October 24, 2015 is 10,502 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

10/19 Slips and Falls

10/20 Equipment Maintenance

10/21 Personal Hygiene

10/22 Proper Permitting

10/23 Housekeeping on the Jobsite

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been six rain events to date over ¾ of an inch, and the BMP's had to be repaired after the last rain event in a several locations. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of October 19, 2015

- Liner at the PCB Cells was completed
- The destructs in the liner were surveyed by Turner Surveying
- Installation of Geocomposite began at PCB Cells
- Material was screened and stockpiled at the Borrow Pit
- Northern, Southern, and Eastern Walls of Area E Wall was poured
- Area A will continue being prepped for Area A Slab on Grade

- Formwork and tying of steel continued in Area A for the Slab on Grade
- Fence Post were driven along the southern and northern limits of Area A for future fence

Work in progress for the week of October 26, 2015

- Geocomposite will be placed and sowed at the PCB Cells
- Material will be screened and stock piled at the Borrow Pit
- Forms from Northern, Eastern, and Southern Area E Wall will be wrecked
- Next Section of Area A Slab on Grade will be poured
- Fence around the old weather station was removed in Area A
- Due to Rain, Randy's Crew will begin hauling and placing Dense Grade Base in Area C&D
- Tyler's crew will begin raising PIV's and Hydrant in Area A

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Liner Subcontractor will be finished at the PCB Cells
- Soil Cover Layer will begin being hauled to cover the PCB Cells
- Formwork for West side of Area E Footer
- Continue Preparing Area A for concrete
- Continue Pouring Area A Concrete Slab on Grade
- Fence will be installed in Area A as we finish Concrete Slab on Grade
- Herbicide will be sprayed in Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting November 4, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday October 31, 2015 is 11,308 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

10/26 Lockout Tag Out

10/27 Fire Extinguisher Familiarization

10/28 Confined Space

10/29 Adapting to New Environments and Task

10/30 Halloween Safety (watching for children on the roads)

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been eight rain events to date over ¾ of an inch, and the BMP's held up through each of the two rain events in the last week. Temporary Fence at the PCB Cells is also being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of October 26, 2015

- Installation of Geocomposite Continued at PCB Cells
- Material was screened and stockpiled at the Borrow Pit
- Northern, Southern, and Eastern Walls of Area E Wall was stripped
- Western Footer began being formed
- Area A continued being prepped for Area A Slab on Grade
- Formwork and tying of steel continued in Area A for the Slab on Grade

- Area A Slab on Grade continued being poured
- PIV and Hydrants began being raised in Area A
- Fence around the old weather station in Area A was removed
- Area A was sprayed with Herbicide
- Due to Rain, blended stone layer for Area C&D began being hauled and placed
- Installed Silt Fence at Area C & D

Work in progress for the week of November 2, 2015

- Sowing of the Geocomposite at the PCB Cells was finished
- Material will be screened and stock piled at the Borrow Pit
- Soil Cover Layer will begin being placed over the Geocomposite as soon as it dries out enough to haul dirt
- Due to rain, Tyler Hollis's Crew began clearing for perimeter fence
- Blended Stone Layer at Area C&D was finished being placed and blended
- Turner is surveying the blended layer of Area C&D
- The next 6" layer of DGB will begin being placed in Area C&D
- Next Section of Area A Slab on Grade will be poured
- Tyler's crew will finish raising PIV's and Hydrant in Area A
- Western Wall in Area E is held up at the moment, due to design change of the wall. (New Control Building will require engineered fill that was unaccounted for in the original wall design)
- Sign in Area E is being raised
- Valve Vault in Area E is being Raised

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Soil Cover Layer will begin being hauled to cover the PCB Cells
- Formwork for West side of Area E Footer
- Continue Preparing Area A for concrete
- Continue Pouring Area A Concrete Slab on Grade

- Fence will be installed in Area A as we finish Concrete Slab on Grade
- Continue Hauling and Placing DGB to Area C&D

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting November 11, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday November 8, 2015 is 12,904 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

11/2 Power Tool Inspection

11/3 The 12 Fatal Job Site Mistakes

11/4 Work Truck Safety Inspections

11/5 Proper BMP Installation and Maintenance

11/6 Inclement Weather

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been eight rain events to date over ¾ of an inch, and the BMP's held up through each of the two rain events in the last week. Temporary Fence at the PCB Cells and at Area A are being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of November 2, 2015

- Sowing of Geocomposite at the PCB Cells was finished
- Material was screened and stockpiled at the Borrow Pit while weather permitted
- Due to Rain Tyler Hollis's Crew began clearing for perimeter fence
- Preparation for Area A Slab on Grade was complete
- Formwork and tying of steel continued in Area A for the Slab on Grade

- Area A Slab on Grade continued being poured
- PIV and Hydrants were completed being raised in Area A
- Blended Layer of Stone in Area C&D was completed
- Survey was conducted on the blended layer at Area C&D
- 6” Layer of DGB was Installed on Areas C&D
- Valve Vault in Area E was raised

Work in progress for the week of November 9, 2015

- Material will be screened and stock piled at the Borrow Pit
- Soil Cover Layer will begin being placed over the Geocomposite at the PCB Cells
- The Geocells began being installed in Area C & D
- Next Section of Area A Slab on Grade will be poured
- Form Work for Western Footer in Area E will resume
- Foundation for Sign in Area E will be poured

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Soil Cover Layer will be hauled to cover the PCB Cells
- Formwork for West side of Area E Footer and Wall
- Light Poles will be raised in Area E
- Area A Slab on Grade will be complete
- Fence will be installed in Area A as we finish Concrete Slab on Grade
- Continue Installing Geocells in Area C & D
- Continue Filling Geocells with DGB in Area C&D

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting November 18, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday November 14, 2015 is 13,704 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

11/9 BMP Inspection

11/10 Wet Roads/Slips and Falls while Working on Geocells

11/11 Fog Low Visibility/Slips and Falls while on Working on Geocells

11/12 Muscle Strain and Sprains

11/13 Hydration and Personal Health

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been nine rain events to date over ¾ of an inch. We had a very large rain last weekend that had a cumulative total of over 3.68", There was a breach in the BMP's in Borrow Area, and the Northeast Corner of the PCB Cells, They were repaired Monday morning. There was also a wash out in the DGB in Area C&D, it was repaired on Monday as well. Temporary Fence at the PCB Cells and at Area A are being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of November 9, 2015

- Material was screened and stockpiled at the Borrow Pit as weather permitted
- Began Hauling the Soil Cover Layer to the PCB Cells
- Area A Slab on Grade was complete

- Installed Gate Post on Northwest Section of Area A
- 6” Layer of DGB was complete in Area C & D
- Geocells began being installed in Area C & D
- Geocells began being filled with DGB in Area C&D

Work in progress for the week of November 16, 2015

- Material will be screened and stockpiled at the Borrow Pit weather permitting
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- The Geocells will continue being installed
- The Geocells will continue being filled with DGB
- Form Work for Western Footer in Area E will resume
- Will Pour the next section of the Western Footer
- Foundation for Sign in Area E will be poured

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Soil Cover Layer will be hauled to cover the PCB Cells
- Formwork for West side of Area E Footer and Wall
- Light Poles will be raised in Area E
- Fence will be installed in Area A
- East-West Run of Existing Fence will be removed in Area A
- Fence will be installed in the field north of Area A
- Continue Installing Geocells in Area C & D
- Continue Filling Geocells with DGB in Area C&D

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting December 2, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday November 28, 2015 is 14,931 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings in the last two weeks included the following:

11/16 BMP Inspection

11/17 Safety Sheets/ Slips and Falls

11/18 Equipment Inspection

11/19 Safety Stand Down

11/20 Good House Keeping

11/23 Complacently

11/24 Maintenance and Service

11/25 Holiday Safety

11/26 Thanksgiving Holidays

11/27 Thanksgiving Holidays

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been ten rain events to date over ¾ of an inch. The BMP's held up through last week's rain event. Temporary Fence at the PCB Cells and at Area A are being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted. Due to Thanksgiving Holiday's this is a two week Update.

Work completed weeks of November 16 & November 23

- Material was screened and stockpiled at the Borrow Pit as weather permitted
- Began Hauling the Soil Cover Layer to the PCB Cells
- Geocells were installed in Area C & D
- Geocells continued being filled with DGB in Area C&D
- Area E Sign foundation was poured
- Area E Light Pole Bases were Poured
- West Side footer for Area E Wall was Poured

Work in progress for the week of November 30, 2015

- Material will be screened and stockpiled at the Borrow Pit as weather permits
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- The Geocells will continue being installed
- The Geocells will continue being filled with DGB
- Area E Wall will resume
- Fence is being installed in Area A
- Perimeter Fence will finish being cleared
- Perimeter Fence will be staked out

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Soil Cover Layer will be hauled to cover the PCB Cells
- Form and Pour West side of Area E Footer and Wall
- Fence will be complete in Area A
- Fence will begin in the field North of Area A
- Continue Installing Geocells in Area C & D
- Continue Filling Geocells with DGB in Area C&D

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project. Week of November 23, 2015 concluded on Wednesday November 25 in observation of Thanksgiving Holidays.

Weekly Update Meeting December 9, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday December 5, 2015 is 15,890 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

11/30 Equipment Check Sheets

12/1 Complacency

12/2 Proper PPE

12/3 Task Safety Evaluations

12/4 Heed, Hear, and Understand

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been eleven rain events to date over ¾ of an inch. The BMP's held up through last week's rain event. Temporary Fence at the PCB Cells is being inspected daily. Temporary Fence in Area A was removed, because permanent fence was installed. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed weeks of November 30

- Material was screened and stockpiled at the Borrow Pit as weather permitted
- Hauled the Soil Cover Layer to the PCB Cells
- Geocells were installed in Area C & D
- Geocells continued being filled with DGB in Area C&D

- Fence was installed in Area A
- Temporary Fence was removed from Area A
- Perimeter Fence was finished being cleared
- Perimeter Fence was staked out

Work in progress for the week of December 7, 2015

- Material will be screened and stockpiled at the Borrow Pit as weather permits
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- Topsoil will be placed on top of the Soil Cover Layer in the Southwest corner
- The Geocells will be finished, with the exception of approximately 11,000 SF. Those Cells will be complete once the additional Geocells are delivered.
- The Geocells that are installed will be filled with DGB
- Next Section of Area E wall will be poured
- Fence North of Area A will begin

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Soil Cover Layer will be complete at the PCB Cells
- Topsoil will be ongoing at the PCB Cells
- Form and Pour West side of Area E Footer and Wall
- Fence will be complete in the field North of Area A
- Perimeter Fence will begin on Southside of Highway 202

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting December 16, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday December 12, 2015 is 16,580 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

12/7 Awkward Postures

12/8 Electrical Hazards

12/9 Driving Safety

12/10 Competent Person

12/11 Chemical Hazard Communication

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been twelve rain events to date over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed weeks of December 7

- Material was screened and stockpiled at the Borrow Pit as weather permitted
- Hauled the Soil Cover Layer to the PCB Cells
- Hauled and Stockpiled Topsoil at the PCB Cells
- Geocells were completed at Area C&D with the exception of 9,306 SF which we had to order from manufacturer
- Fence began being installed in the field north of Area A

- Next 120’ section of wall was poured in Area E
- Excavated for the remainder of Area E Footer.

Work in progress for the week of December 14, 2015

- Material will be screened and stockpiled at the Borrow Pit as weather permits
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- Topsoil will be placed on top of the Soil Cover Layer as it is complete
- The remainder of the Geocells will arrive
- The rip rap perimeter began being installed at Area C&D
- Area E Wall forms will be wrecked
- Next section of Area E Footer will be formed
- Fence North of Area A will be finished
- Gate in Area A will be installed

Work anticipated for the next two weeks

- Screen and Stockpile Dirt for PCB Cells
- Soil Cover Layer will continue at the PCB Cells
- Topsoil will be ongoing at the PCB Cells
- Form and Pour West side of Area E Footer and Wall
- Perimeter Fence will begin on Southside of Highway 202
- Taylor Corporation will take off after December 22 in observation of Christmas Holidays and will resume on January 4.

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting December 22, 2015

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday December 19, 2015 is 17,128 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

12/14 Equipment Maintenance

12/15 Top Five Safety Features on a Vehicle

12/16 Slips and Falls

12/17 Top 10 Reasons for Injuries on the Job Site

12/18 Personal Hygeine

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been eleven rain events to date over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed weeks of December 14

- Material was screened and stockpiled at the Borrow Pit as weather permitted
- Hauled the Soil Cover Layer to the PCB Cells as weather permitted
- Rip Rap Perimeter Barrier at Area C&D began being installed
- Fence in the field north of Area A was installed
- Northern Gate at Area A was installed
- Southern Light Pole in Area E was transferred to new pole base

Work in progress for the week of December 21, 2015

- Material will be screened and stockpiled at the Borrow Pit as weather permits
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- Topsoil will be placed on top of the Soil Cover Layer as it is complete
- The remainder of the Geocells will be installed at Area C&D
- The rip rap perimeter will be complete at Area C&D
- Fence North of Area A will be finished
- Northern Light Pole in Area E will be transferred to new Pole Base

Work anticipated for the next two weeks upon return

- Once Construction activities resume we will concentrate on completing cover of the PCB Cells, and preparing to haul to Area A

Opportunities

- Taylor Corporation will take off after December 22 in observation of Christmas Holidays and will resume on January 4
- BMP's and temporary fencing will continue to be inspected during the Christmas Holiday Shutdown

Weekly Update Meeting January 13, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday January 9, 2016 is 18,427 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

1/4 Equipment Check Sheets

1/5 Complacency

1/6 Proper PPE

1/7 Task Safety Evaluations

1/8 Heed, Hear, and Understand

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been sixteen rain events to date over ¾ of an inch. There were five significant rain events while on Christmas Holiday Vacation. After each rain event, Deon Dupree of Taylor Corporation came in to inspect the BMP's and made any repairs necessary. Temporary Fence at the PCB Cells is being inspected daily. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of January 4, 2016

- Returned to Work from Christmas Holidays on Monday January 4, 2016
- Sediment Pond had to be mucked out from recent rain events
- Material was screened and stockpiled at the Borrow Pit as weather permitted.

- Hauled the Soil Cover Layer to the PCB Cells.
- Hauled and Stockpiled Topsoil at the PCB Cells.
- Grades were verified in the south portion of the PCB Cells, so that it can be grassed.
- Next 120' section of Area E wall footer was formed.
- Last of the DGB was installed into the Geocells
- Decon Pad near Temporary Guard Shack was Removed
- Grading took place around perimeter of Area C&D to enhance drainage

Work in progress for the week of January 11, 2016

- Material will be screened and stockpiled at the Borrow Pit as weather permits
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- Topsoil will be placed on top of the Soil Cover Layer as it is complete
- The rip rap perimeter began being installed at PCB Cells
- South Half of the PCB Cells will be Hydroseeded
- Next Section of Area E Footer was Formed and Poured
- Slab on Grade in Northeast corner outside of Area E Wall was Formed and Poured
- Perimeter Fence will Begin

Work anticipated for the next two weeks

- Finish Soil Cover Layer at PCB Cells
- Finish Topsoil at PCB Cells
- Install Maintenance Road at PCB Cells
- Install Rip Rap perimeter at PCB Cells
- Finish Hydroseeding at PCB Cells
- Form and Pour next 120' Section of Wall in Area E
- Form and Pour Slab on Grade in Northwest Corner outside of Area E Wall

- East to West Run of Existing Fence in Area A will be taken down.
- Guy wires in Area A will be raised to accommodate 2’ Fill
- Vaults in Area A will be raised to accommodate 2’ Fill
- Perimeter Fence will continue on Southside of Highway 202

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting January 20, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday January 16, 2016 is 19,138 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

1/11 Overhead Hazards

1/12 Site Construction Traffic

1/13 Hazard Communication

1/14 Electrical Hazards

1/15 Crane Operations and Taglines

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been seventeen rain events to date over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. The permanent Perimeter Fence will begin this week. Once it is complete the temporary fence at the PCB Cells will be removed. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of January 11, 2016

- Hauled the Soil Cover Layer to the PCB Cells.
- Hauled and Stockpiled Topsoil at the PCB Cells.
- Rip Rap was installed along the Southern Limits of the PCB Cells
- The Southern Half of the PCB Cells was Hydroseeded
- Next 120’ section of Area E wall footer was poured.

- Slab on Grade in Northeast corner of Area E outside of the wall was poured
- East to West Run of Existing Fence in Area A was taken down.

Work in progress for the week of January 18, 2016

- Material will be screened and stockpiled at the Borrow Pit as weather permits
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- Topsoil will be placed on top of the Soil Cover Layer as it is complete
- Bollards around Pump Station in the Northwest Corner of Area E were installed
- Next 120' section of wall is being formed
- Perimeter Fence is being installed South of Alabama Highway 202

Work anticipated for the next two weeks

- Finish Soil Cover Layer at PCB Cells
- Finish Topsoil at PCB Cells
- Install Maintenance Road at PCB Cells
- Install Rip Rap perimeter at PCB Cells
- Finish Hydroseeding at PCB Cells
- Form and Pour Slab on Grade in Northwest Corner outside of Area E Wall
- Guy wires in Area A will be raised to accommodate 2' Fill
- Retaining walls will be installed around the vaults in Area A to accommodate 2' Fill
- Perimeter Fence will be complete on Southside of Highway 202

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting January 27, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday January 23, 2016 is 19,628 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

1/18 Safety Awareness/Hyperthermia

1/19 Top 10 Workplace Related Injuries

1/20 Driver Awareness/Complacency

1/21 Fall Prevention

1/22 Workplace Violence/Driving Conditions

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been eighteen rain events to date through Saturday January 23 over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. The permanent Perimeter Fence began last week. Once it is complete the temporary fence at the PCB Cells will be removed. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of January 18, 2016

- Hauled the Soil Cover Layer to the PCB Cells.
- Hauled and Stockpiled Topsoil at the PCB Cells.
- Formed next 120’ section of Area E Wall (Pushed pour back to Monday 1-25-2016 due to freezing temperatures)
- Bollards were installed in Northwest Corner of Area E

- Perimeter fence began on south side of Alabama Highway 202
- Finished Ditch around area C&D and the added rip rap ditch down the south eastern embankment

Work in progress for the week of January 25, 2016

- Had a specialist come out and look at the screen, and to make repairs while weather is inclement
- Soil Cover Layer will continue being placed over the Geocomposite at the PCB Cells
- Topsoil will be placed on top of the Soil Cover Layer as it is complete
- Filter Ring in Area C&D was complete, which completes Area C&D
- Slab on grade in Northwest Corner of Area E around Pump Station will be complete
- Next section of Area E Footer will be formed
- Footers for extending Area A Vaults will be Prepped for Concrete
- Perimeter Fence is being installed South of Alabama Highway 202

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material
- Finish Soil Cover Layer at PCB Cells
- Finish Topsoil at PCB Cells
- Install Maintenance Road at PCB Cells
- Install Rip Rap perimeter at PCB Cells
- Finish Hydroseeding at PCB Cells
- Perimeter Fence will be complete on Southside of Highway 202
- Disk Area A to prepare for Soil Cover

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting February 3, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday January 30, 2016 was 20,450 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

1/25 Situational Awareness

1/26 Tailgate Safety on Each Specific Job

1/27 Hazardous Awareness/Proper PPE

1/28 Tools Safety/Proper Use

1/29 Slips and Fall Prevention

BMPs are being inspected daily, and after each rain event that is over ¾ of an inch. There have been eighteen rain events to date through Saturday January 30 over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. Approximately 1800 LF of the permanent Perimeter Fence is installed on the Southside of Alabama Highway 202. Once it is complete the temporary fence at the PCB Cells will be removed. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site. No tampering of gates or equipment has been noted.

Work completed week of January 25, 2016

- Had a Specialist come and inspect the Shaker Screen, and he is going to provide an itemized list for repairs
- Rented a Shaker Screen while Repairs were made to Taylor Corp's Screen
- Hauled the Soil Cover Layer to the PCB Cells.

- Hauled and Stockpiled Topsoil at the PCB Cells.
- Perimeter fence continued on the Southside of Alabama Highway 202.
- Poured the next 120’ section of wall in Area E.
- Filter Ring was installed in Area C&D.
- Footers for Retaining Walls around the two eastern most Vaults in Area A were prepared for Concrete.
- Formwork for Retaining Walls around the two eastern most Vaults in Area A began.
- Area A was disked and rolled in.
- Removed north-south run of fence along the northwest side of Area A.
- Removed Speed Bump North of Area A, to prepare to haul soil to Area A.
- BMP’s were installed in Area A.

Work in progress for the week of February 1, 2016

- Screening and stockpiling material in Borrow Pit
- Soil Cover Layer is ongoing in the PCB Cells
- Topsoil is being placed on top of the Soil Cover Layer as it is complete
- Slab on grade in Northwest Corner of Area E around Pump Station is complete
- Footers for Area A Retaining wall around two most eastern Vaults were poured
- Walls around Vaults in Area A will be installed
- Perimeter Fence on the Southside of Alabama Highway 202 is ongoing

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material
- Finish Soil Cover Layer at PCB Cells
- Finish Topsoil at PCB Cells
- Install Maintenance Road at PCB Cells
- Install Rip Rap perimeter at PCB Cells

- Finish Hydroseeding at PCB Cells
- Vaults in Area A will be complete
- Begin Hauling 6” soil cover material to Area A
- Form and Pour next 60’ of Wall in Area E
- Perimeter Fence will be Complete

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting February 10, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday February 6, 2016 were 21,013 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

2/1 Overhead Hazards

2/2 Most Dangerous Tools

2/3 Site Construction Traffic

2/4 Equipment Maintenance

2/5 Slips and Falls

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been nineteen rain events to date through Saturday, February 6 over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. Before last week's rain event we had a crew inspect the BMP's, and ensure that they were in good shape prior to the rain. However, there was a blow out in the BMPs in Area A; the blow out was repaired first thing Wednesday morning. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of February 1, 2016

- Hauled the Soil Cover Layer to the PCB Cells.
- Hauled and Stockpiled Topsoil at the PCB Cells.
- Repaired Taylor Corporation's screen

- Continued perimeter fence on the Southside of Alabama Highway 202.
- Poured Concrete Footers for Retaining Walls around the two eastern most Vaults in Area A
- Began formwork for Retaining Walls around the two eastern most Vaults in Area A
- Poured slab in Northwest corner of Area E

Work in progress for the week of February 8, 2016

- Screening and stockpiling material in Borrow Pit
- Soil Cover Layer is finished at the PCB cells
- Topsoil is being placed on top of the Soil Cover Layer as it is completed
- Rip Rap Perimeter is ongoing at the PCB Cells
- Laser Scan Area A so that a model can be built for the 6" soil layer
- Walls for Area A Retaining wall around two most eastern Vaults were postponed due to temperatures, but will be poured on Thursday
- Next 75' of footer in Area E will be poured
- Perimeter Fence on the Southside of Alabama Highway 202 is ongoing

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material
- Finish Topsoil at PCB Cells
- Finish Rip Rap perimeter at PCB Cells
- Finish Hydroseeding at PCB Cells
- Complete Vaults in Area A
- Begin Hauling 6" soil cover material to Area A
- Form and Pour next 75' of Wall in Area E
- Complete Perimeter Fence

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting February 16, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday February 13, 2016 were 21,829 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

2/8 Lock Out/Tag Out

2/9 Speed Control

2/10 Cold Injury/Truck Traffic

2/11 Safety Checks

2/12 Shore Up for Rain Events

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been nineteen rain events to date through Saturday, February 13 over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. Wattles were added in Area A, because it is a safety hazard to install silt fence on the slopes of the ditch along Clydesdale Ave. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of February 8, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Soil Cover Layer was finished at the PCB Cells
- Topsoil was finished at the PCB Cells
- Worked on Rip Rap Armor Shield at the PCB Cells
- Poured Concrete Walls for Retaining Walls around the two eastern most Vaults in Area A.

- Laser Scanned Area A, so that a GPS Model can be built for the 6” soil layer beneath the liner.
- Poured footer for the next 75’ section of Area E, we are leaving a 60’ section of wall out for access to haul material into the Area E.
- Continued perimeter fence on the Southside of Alabama Highway 202.

Work in progress for the week of February 15, 2016

- Screening and stockpiling material in Borrow Pit
- Rip Rap Perimeter will be finished at the PCB Cells
- Forms for Walls for Area A Retaining wall around two most eastern Vaults will be wrecked
- Next 75’ of wall in Area E will be poured
- Digging out for concrete cover and wall around western most vault in Area A.
- Begin forming wall for western most vault in Area A.
- Perimeter Fence on the Southside of Alabama Highway 202 is ongoing

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material
- Finish Hydroseeding at PCB Cells
- Complete Vaults in Area A
- Begin Hauling 6” soil cover material to Area A
- Complete Perimeter Fence

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting February 24, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday February 20, 2016 were 22,547 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

2/15 Rain/Excavation in Plant

2/16 Accident Release/Spill Control

2/17 Decontamination Procedure

2/18 Permitting

2/19 Rigging and Lifting

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty rain events to date through Saturday, February 20 over ¾ of an inch. Temporary Fence at the PCB Cells is being inspected daily. Permanent Perimeter Fence will be complete this week. We have a guard monitoring the construction entrance gate during construction hours. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of February 15, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Finished Rip Rap Armor Shield at the PCB Cells with the exception of the northeast corner until a plan could be made on the seep
- Began Installing the Maintenance Road at the PCB Cells.
- Poured wall for the next 75’ section of Area E, we are leaving a 40’ section of wall out for access to haul material into the Area E.

- Continued perimeter fence on the Southside of Alabama Highway 202.
- Graded for Slab and Wall around western most Vault in Area A.
- Began Forming for wall around western vault in Area A.

Work in progress for the week of February 22, 2016

- Screening and stockpiling material in Borrow Pit weather permitting.
- Finish maintenance road at the PCB Cells weather permitting.
- Grass and Mulch north half of PCB Cells weather permitting.
- Finish forming and pour concrete wall at the Western Most Vault in Area A.
- Sheep Foot Roll Area A weather permitting.
- Wreck Wall Forms in Area E.
- Perimeter Fence on the Southside of Alabama Highway 202 will be complete.

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material
- Area A Vault Modifications will be complete
- Begin Hauling 6” soil cover material to Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting March 2, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday February 27, 2016 were 22,847 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

2/22 New Permit Process

2/23 Inclement Weather

2/24 Hazard Communication (MSDS)

2/25 3 Points of Contact

2/26 Surroundings/Foot Traffic

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-three rain events to date through Saturday, February 27 over ¾ of an inch. Temporary Fence at the PCB Cells was removed last week as the permanent fence was complete. We now have no temporary fence on the job. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of February 22, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Finished Maintenance Road at the PCB Cells
- Finished Dressing Up Topsoil at PCB Cells in Preparation for Hydroseeding

- Wrecked wall forms for the next 75’ section of Area E (we are leaving a 40’ section of wall out for access to haul material into the Area E.)
- Finished perimeter fence on the Southside of Alabama Highway 202.
- Raised Fiber Pedestal in Area A
- Made wall footer pour for wall around western most vault in Area A.

Work in progress for the week of February 29, 2016

- Screening and stockpiling material in Borrow Pit.
- Grass and Mulch north half of PCB Cells.
- Removed Fiber Pedestal in Area E.
- Repaired Sinkhole in Area A.
- Finish tilling up Area A with skid-steer tiller in the areas that were too small for John Deere Tractor and Disk.
- Begin hauling 6”soil layer to Area A.
- Finish forming and pouring concrete wall at the Western Most Vault in Area A.
- Pour Slab on Grade at Western most vault in Area A.

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material
- Area A Vault Modifications will be complete
- Finish Hauling 6” Soil Cover to Area A
- Plastic Fusion to mobilize to install liner on Area A.
- Begin Hauling 6” Soil Cover to Area E

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting March 9, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday March 5, 2016 were 23,387 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

2/29 Crossing Highway

3/1 Traffic Route

3/2 Overhead/Underground Utilities

3/3 Dust Control

3/4 Flood Preparedness

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-four rain events to date through Saturday March, 5th that were over ¾ of an inch. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of February 29, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Finished grassing and mulching north side of PCB Cells
- Removed Pedestal in Area E
- Repaired sinkhole in Area A
- Finish tilling up Area A with skid-steer tiller in the areas that were too small for John Deere Tractor and Disk.
- Began hauling 6” Soil layer to Area A

- Finished wall for western most vault in Area A
- Formed Slab on Grade for western most vault in Area A
- Met with Landscape Architect for Area H.

Work in progress for the week of March 7, 2016

- Screening and stockpiling material in Borrow Pit.
- Hauling 6”soil layer to Area A.
- Finish pouring slab on grade for western Area A Vault

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material
- Finish Hauling 6” Soil Cover to Area A
- Plastic Fusion to mobilize to install liner on Area A.
- Begin Hauling 6” Soil Cover to Area E

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting March 16, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday March 12, 2016 were 24,221 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

3/7 Behavioral Safety

3/8 Hazard Awareness

3/9 Dust Control

3/10 Safety Stand Down

3/11 Tarping Trucks

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-four rain events to date through Saturday March, 12th that were over ¾ of an inch. We now have no temporary fence on the job. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of March 7, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Finished hauling 6" Soil layer to Area A
- Finished Pouring Slab on Grade for Area A Vault
- Began Prepping Area E for 6" Soil Cover Layer

Work in progress for the week of March 14, 2016

- Screening and stockpiling material in Borrow Pit.

- Plastic Fusion mobilized to begin liner in Area A
- Disk and Rolled Area E
- Began hauling 6”soil layer to Area E
- Finished hauling 6” soil layer to Area E.

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material.
- Siberton Fence will mobilize to finish ditch crossings and replace fencing south of the PCB cells.
- Plastic Fusion to install liner on Area A.
- Plastic Fusion will begin installing liner on Area E.

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting March 23, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday March 19, 2016 were 25,131 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

3/14 Hot Work

3/15 Loading and Unloading Equipment

3/16 Security

3/17 Don't Be in a Hurry

3/18 Overhead Lines

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-four rain events to date through Saturday March, 19th that were over ¾ of an inch. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of March 14, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Plastic Fusion began Installing Liner in Area A
- Disked and Rolled Area E
- Began and completed Hauling 6" Soil layer to Area E

Work in progress for the week of March 21, 2016

- Screening and stockpiling material in Borrow Pit.
- Plastic Fusion finished liner in Area A.

- Plastic Fusion to begin liner in Area E.
- Siberton Fence is onsite to complete fence work.

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material.
- Plastic Fusion to finish liner in Area E.
- Plastic Fusion to install geocomposite layer in Area E.
- Begin installing 12” soil cover layer in Area E.
- Plastic Fusion to install geocomposite layer in Area A.

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting March 30, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday March 26, 2016 were 26,126 hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

3/21 Fatigue

3/22 Situational Awareness

3/23 Plant Traffic

3/24 Power Tools and Equipment

3/25 Emergency Preparedness

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-four rain events to date through Saturday March, 26th that were over ¾ of an inch. Siberton is going to cut in a new 16' gate in the fence north of Area A, we installed temporary fence until Siberton can complete the gate. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of March 21, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Plastic Fusion finished installing geomembrane in Area A
- Plastic Fusion began installing geomembrane in Area E
- Siberton Completed fence around the PCB Cells

Work in progress for the week of March 28, 2016

- Screening and stockpiling material in Borrow Pit.
- Plastic Fusion completed geomembrane in Area E.
- Plastic Fusion finished geocomposite in Area E.
- Plastic Fusion began geocomposite in Area A.
- Installed Directional Bores into Area A.
- Begin to haul 12” soil cover to Area E.

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material.
- Plastic Fusion to finish geocomposite in Area A.
- Finish installing 12” soil cover layer in Area E.
- Begin installing topsoil in Area E.
- Install drainage pipe in Area E.
- Finish Area E Footer and Wall.

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting April 6, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday April 2, 2016 were 26,981hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

3/28 Slips and Falls

3/29 PCB Awareness and PPE

3/30 Plant Truck Traffic

3/31 Team Work

4/1 Hazwoper Refresher Course

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-four rain events to date through Saturday April, 2nd that were over ¾ of an inch. We did get over 1" of rain last week; however, it was over the course of two days, and we did not get over 3/4" rain in a single day. Siberton finished the new gate in the fence north of Area A last Friday. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of March 28, 2016

- Screened and Stockpiled Material at the Borrow Pit
- Plastic Fusion finished installing geomembrane in Area E
- Plastic Fusion finished installing geocomposite in Area E
- Plastic Fusion finished installing geocomposite in Area A

- Installed directional bore into Area A.
- Siberton installed new gate in the fence north of Area A.
- Began installing haul road into Area E

Work in progress for the week of April 4, 2016

- Screening and stockpiling material in Borrow Pit.
- Began to haul 12" soil cover to Area E.
- Began installing topsoil in Area E.
- Begin Installing Drainage Pipe in Area E

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material.
- Brown Construction to mobilize to finish wall and footer in Area E.
- Plastic Fusion will mobilize to finish liner in Area E.
- Begin hauling 12" layer of soil cover to Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting April 13, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday April 9, 2016 were 27,391 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

4/4 Congested Work Area

4/5 Accountability

4/6 Hand Tool Inspection

4/7 Excavation Safety

4/8 Hazwoper Refresher

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-five rain events to date through Saturday April, 9th that were over ¾ of an inch. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of April 4, 2016

- Finished Hauling 12" Soil Cover to Area E (Except for corner left out for access)
- Finished Hauling Topsoil to Area E (Except for corner left out for access)
- Installed 4" Perforated Pipe in Area E
- Installed #57 Stone around pipe in Area E

Work in progress for the week of April 11, 2016

- Screening and stockpiling material in Borrow Pit (weather permitting)
- Install Sod in Area E (weather permitting)
- Continue constructing Haul Road in Area A (weather permitting)
- Began to haul 12" soil cover to Area A (weather permitting)
- Will Pull Carrier Pipe through Casing at Area A

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material.
- Brown Construction to mobilize to finish wall and footer in Area E.
- Plastic Fusion will mobilize to finish liner in Area E.
- Continue hauling 12" layer of soil cover to Area A
- Begin hauling Topsoil to Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting April 20, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Health and Safety

Safe hours worked through Saturday April 16, 2016 were 27,893 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this past week included the following:

4/11 Fire Extinguisher Inspection

4/12 Hazwoper Pt 2

4/13 Fall Protection

4/14 PCB Awareness

4/15 Narrow Roads in Borrow Pit

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-six rain events to date through Saturday April, 16th that were over ¾ of an inch. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of April 11, 2016

- Screened and Stockpiled Material in the Borrow Pit.
- Began Constructing Haul Road in Area A.
- Began Hauling Soil Cover to Area A.
- Installed 3” Carrier Pipe through north bore in Area A.

Work in progress for the week of April 18, 2016

- Screening and stockpiling material in Borrow Pit.
- Installed Sod in Area E.
- Installing Soil Cover in Area A.
- Brown Construction to mobilize to finish footer and wall in Area E.

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material.
- Complete installation of the final section of footer and wall in Area E.
- Plastic Fusion will mobilize to finish liner in Area E.
- Continue hauling 12” layer of soil cover to Area A.
- Begin hauling Topsoil to Area A.
- Reinstall Sign in Area E

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting April 27, 2016

Project: OU-3 Remediation

Health and Safety

Safe hours worked through Saturday April 23, 2016 were 28,463 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this past week included the following:

4/18 Alertness

4/19 Time on Equipment

4/20 Spotting Trucks

4/21 Rain Prep

4/22 Taking Care of yourself

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-six rain events to date through Saturday April, 23rd that were over ¾ of an inch. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of April 18, 2016

- Screen and Stockpile Material in the Borrow Pit
- Installed Sod in Area E
- Brown Began Forming Footer for Area E
- Hauled Soil Cover to Area A
- Hauled Topsoil to Area A

Work in progress for the week of April 25, 2016

- Screening and stockpiling material in Borrow Pit.
- Brown Construction will Pour Footer in Area E
- Brown Construction will begin forming Wall in Area E
- Electronic Sign will be Reinstalled in Area E
- Installing Soil Cover in Area A
- Installing Topsoil in Area A

Work anticipated for the next two weeks

- Continue to Screen and Stockpile material.
- Complete Wall in Area E.
- Complete concrete curb near western vault in Area A.
- Plastic Fusion will mobilize to finish liner in Area E.
- Backfill behind wall in Area E.
- Lay Sod behind wall in Area E.
- Finish Drainage Pipe & #57 Stone in Area E.
- Continue hauling 12" layer of soil cover to Area A.
- Continue hauling Topsoil to Area A.

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting May 4, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Health and Safety

Safe hours worked through Saturday May 7, 2016 were 29,462 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week include the following:

5/2 Proper PPE

5/3 Hydration

5/4 Equipment Safety

5/5 Good Hygiene

5/6 Weather Preparation

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-seven rain events to date through Saturday May 7th that were over ¾ of an inch. We have a guard monitoring the construction entrance gate during construction hours. The guard will be moved down to the gate north of Area A while we are hauling to Area A. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of May 2, 2016

- Screened and stockpiled material
- Wrecked forms in Area E
- Finished 6" Soil Preparation under liner in southwest corner of Area E
- Plastic Fusion finished liner and geocomposite in southwest corner of Area E
- Finished Cover Soil and Topsoil in southwest corner of Area E
- Re-Connect Electrical for Sign in Area E

- Finish Drainage Pipe and #57 Stone in Area E
- Continued Hauling Cover Soil to Area A
- Continued Hauling Topsoil to Area A

Work in progress for the week of May 9, 2016

- Finish Sod in Area E
- Finished Hauling Cover Soil to Area A
- Finished Hauling Topsoil to Area A
- Begin Fine Grading Area A around vaults
- Survey Depths in Area A
- Begin Rip Rap Barrier in Area A

Work anticipated for the next two weeks

- Finish Rip Rap Barrier in Area A
- Finish fine grading Area A around vaults
- Hydroseed and Mulch Area A
- Begin Area H Slab on Grade, Fence, and Tree Removal

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Health and Safety

Safe hours worked through Saturday May 28, 2016 were 30,600 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings this week included the following:

5/23 Critical Lift

5/24 Complacency

5/25 House Keeping

5/26 Emergency Response Plan

5/27 Maintenance Service

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-seven rain events to date through Saturday, May 28 th that were over ¾ of an inch. Since all the soil hauling is complete the guard is no longer monitoring the construction entrance. All traffic at this point is entering and exiting through the main plant gate. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of May 23, 2016

- Completely finished Rip Rap Barrier in Southeast Corner of Area A
- Finished Grassing and Haying small Area around Vault in Southeast corner of Area A
- Extended Rip Rap Ditch on south side of Area C&D
- Dug for Slab on Grade in Area H
- Installed Fence in Area H
- Installed Slab on Grade in Area H

- Removed Existing Fence in Area H
- Began General Clean Up

Work in progress for the week of May 30, 2016

- Re-connect the Light Pole in Eastern Area A Vault
- Wreck Forms for Slab on Grade in Area H
- Shoot Final Surveys for Area A and Area E
- Disconnect Power, Water, and Sewer to EPA/Golder Trailer
- Continue General Clean Up
- Work on Punch List Items

Work anticipated for the next two weeks

- EPA/Golder Office Trailer will be removed from the site
- Punch List Items

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project.

Weekly Update Meeting June 22, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday June 18, 2016 were 31,056 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings the last two week included the following:

6/7 Mobilize In

6/8 Watch for Falling Rock

6/9 Heat Stress

6/10 Equipment Checks

6/13 Slips and Falls

6/14 30 Minute Lightning Rule

6/15 Unstable Soil

6/16 Hydration

6/17 Wet Conditions

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-seven rain events to date through June 18th that were over ¾ of an inch. Since all the soil hauling is complete the guard is no longer monitoring the construction entrance. All traffic at this point is entering and exiting through the main plant gate. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of June 6th and 13th

- Restored Borrow Pit
- Finished Surveying for Final As-Built Topo

Work in Progress for week of June 20th

- Restoring Borrow Pit
- Punch List Items

Work Scheduled for the next two weeks

- Finish Borrow Pit Restoration
- Punch List Items

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F. Weekend work is expected for this project. There was no weekly update meeting last week as Ellis was out of town.

Weekly Update Meeting June 29, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday June 25, 2016 were 31,284 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings the last two week included the following:

6/20 Work/Rest Cycle

6/21 Hydration

6/22 Heat Injuries

6/23 Heat Stress

6/24 Sun Exposure

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-seven rain events to date through June 25th that were over ¾ of an inch. Since all the soil hauling is complete the guard is no longer monitoring the construction entrance. All traffic at this point is entering and exiting through the main plant gate. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of June 20th

- Restored Borrow Pit
- Punch List Items

Work in Progress for week of June 28th

- Restoring Borrow Pit
- Punch List Items

Work Scheduled for the next two weeks

- Finish Borrow Pit Restoration
- Punch List Items

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F.

Weekly Update Meeting August 24, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday August 20, 2016 were 32,486 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

8/17 Overhead Danger

8/18 Heat Exhaustion

8/19 Fire Extinguisher

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-eight rain events to date through August 20th that were over ¾ of an inch. Crews re-mobilized last Wednesday to work on the additional curb in Area A. All traffic at this point is entering and exiting through the main plant gate. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of August 15th

- Began Digging out for Additional Curb and Slab on Westside of Area A

Work in Progress for week of August 22nd

- Continued Digging Out for Additional Curb and Slab on Westside of Area A
- Began Forming for Concrete for the Type A Curb and the Slab on Grade
- Will make First Pour on the Type A Curb and Slab on Grade
- Installed steps into Vaults in Area A

- Create more of swale on the Southside of C&D to prevent water from jumping out of the Rip Rap Ditch
- Add some #24 Stone for a Diversion Berm at C&D

Work Scheduled for the next two weeks

- Finish Pouring Additional Slab in Area A
- Finish Dressing Up and Re Grassing Disturbed Area in Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F.

Weekly Update Meeting August 31, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday August 27, 2016 were 33,016 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

8/22 Proper PPE

8/23 Decon (Booties/Gloves During Excavation)

8/24 Hydration

8/25 Medical Response Procedure

8/26 Confined Spaces

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-eight rain events to date through August 27th that were over ¾ of an inch. All traffic at this point is entering and exiting through the main plant gate. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of August 22nd

- Began Forming Southern Portion of Type A Curb
- Formed Slab on Grade Area on west side of Area A
- Poured Southern Portion of Type A Curb and Slab on Grade
- Installed Steps into Vaults in Area A
- Created more of a swale on the south side of C&D to prevent water from jumping out of the Ditch
- Added #24 Stone for a diversion berm in Area C&D

Work in Progress for week of August 27th

- Forming up for The northern half of the Type A Curb in Area A
- Formed up for the Type B and Type C Curb in Area A
- Will make final concrete pour for the additional curb and slabs in Area A.
- Saw Cut and Removed Asphalt Pot holes, and replaced them with Hot Mix Asphalt
- Cut Liner and Geocomposite and then backfilled behind southern portion of Type A Curb.

Work Scheduled for the next two weeks

- Finish Dressing Up and Re Grassing Disturbed Area in Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F.

Weekly Update Meeting September 7, 2016

Project: OU-3 Remediation

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Taylor Corporation

Health and Safety

Safe hours worked through Saturday September 3, 2016 were 33,416 man hours. Daily safety meetings are being held each morning for all construction employees on site. Safety topics at the daily safety meetings last week included the following:

8/29 QCI Refresher Questions

8/30 Fire Safety

8/31 Emergency Response

9/1 Heat Stress

9/2 Work Practices

BMPs are being inspected daily, and after each rain event exceeding ¾ of an inch. There have been twenty-eight rain events to date through September 3rd that were over ¾ of an inch. All traffic at this point is entering and exiting through the main plant gate. Employees sign in with the guard every morning and sign out when they leave the site.

Work completed week of August 29th

- Formed for the northern half of Type A Curb in Area A
- Formed up for Type B and Type C Curb in Area A
- Made Final Concrete Pour for the Additional Curb and Slabs in Area A
- Saw cut and removed Asphalt Potholes, and replaced them with Hot Mix Asphalt
- Cut Liner and Geocomposite and then backfilled behind Type A Curb

- Closed out sediment basin in Borrow Pit
- Re-grassed bare areas in Borrow Pit and PCB Cells

Work in Progress for week of September 5th

- No work on Monday due to Labor Day
- Installed Sod behind new concrete in Area A
- Wrecked All forms from Concrete work

Work Scheduled for the next two weeks

- Continue watering to establish sod in Area A

Opportunities

Taylor Corporation Hours are 6:30 to 4:30 M-F.

Weekly Update Meeting August 12, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- Upon arrival on site, the drillers went through the H&S orientation for the plant site.
- Alabama 811 was contacted to clear utilities for new interceptor well locations. Hand auger holes were advanced to clear utilities prior to drilling.
- Conducted regular H&S briefings. Topics included:
    - Reviewed H&S requirements regarding utilities and the excavation permit policy;
    - Discussed plant PPE requirements and cell phone policy;
    - Discussed general safety requirements and working around heavy equipment; and
    - Discussed working near drill rigs.

Work completed week of August 3, 2015

- Located interceptor well locations
- Excavated 4x4 drill pads and placed material in roll-offs
- Replaced excavated material with clean fill material

Work in progress for the week of August 10, 2015

- Modifying existing wells located in Areas A and E
- Abandoning OWR-6D
- Installing the four new interceptor wells

Work anticipated for the next two weeks

- Preparing submittals for pumping, piping and treatment systems

Opportunities

Weekly Update Meeting August 19, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 194 safe hours worked through Saturday 8/15/2015
- Golder performed daily health and safety briefings with drilling subcontractor. Items discussed included:
    - Poison ivy
    - Traffic safety
    - Stray dogs
    - Slips, trips, and falls due to wet ground surface
- Drilling and installation of four new interceptor wells was completed without a health and safety incident

Work completed week of August 10, 2015

- Drilled, installed, and developed interceptor wells (IW-26 through IW-29)
- Raised existing in-ground well casings in Area E and Area A
- Removed and grouted of OWR-6D

Work in progress for the week of August 17, 2015

- Dispose of drums used to collect well development water
- Relocate and remove roll-offs used for well pads and drilling material

Work anticipated for the next two weeks

- Preparing submittals for pumping, piping and treatment systems

Opportunities

Weekly Update Meeting August 26, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 195 safe hours worked through Saturday 8/22/2015

Work completed week of August 17, 2015

- Installed well caps and locks on the four new Interceptor Wells and the three modified stick-ups.

Work in progress for the week of August 24, 2015

- Dispose of drums used to collect well development water
- Relocate and remove roll-offs used for well pads and drilling material

Work anticipated for the next two weeks

- Preparing submittals for pumping, piping and treatment systems

Opportunities

Weekly Update Meeting September 2, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 195 safe hours worked through Saturday 8/29/2015

Work completed week of August 24, 2015

- Relocate and remove roll-offs used for well pads and drilling material

Work in progress for the week of August 31, 2015

- Dispose of drums used to collect well development water

Work anticipated for the next two weeks

- Preparing submittals for pumping, piping and treatment systems

Opportunities

- Kevin Killoran (Golder Groundwater Systems Engineer) is on site the week of September 1 to meet with subcontractors, plant personnel, and walk the site.

Weekly Update Meeting September 9, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked through Saturday 9/05/2015

Work completed week of August 31, 2015

- Kevin Killoran (Golder Groundwater Systems Engineer) was on site to meet with subcontractors (electrician and field crew), Plant personnel, and walk the site. Kevin met with Plant personnel to discuss ergonomic and maintenance access associated with the groundwater system.

Work in progress for the week of September 7, 2015

- Dispose of drums used to collect well development water

Work anticipated for the next two weeks

- Preparing submittals for pumping, piping and treatment systems

Opportunities

- Golder is continuing to work with Taylor Corp to prepare submittals and schedule

Weekly Update Meeting September 16, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked through Saturday 9/12/2015

Work completed week of September 7, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals and schedule

Work in progress for the week of September 14, 2015

- Preparing submittals for pumping, piping and treatment systems

Work anticipated for the next two weeks

- Continue to develop submittals
- Dispose of drums used to collect well development water

Opportunities

- Taylor Corp. is coordinating with manufacturers for production of carbon treatment shed and other project components

Weekly Update Meeting September 23, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 9/19/2015

Work completed week of September 14, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals and schedule

Work in progress for the week of September 21, 2015

- Preparing submittals for pumping, piping and treatment systems
- Additional roll-off containers are being delivered to site the week of September 21 for material disposal. Drums used for drilling water are currently empty; Golder will coordinate with Taylor Corp to use equipment to crush and disposed of drums in a roll-off

Work anticipated for the next two weeks

- Continue to develop submittals
- Golder will be working with Taylor to inspect the aboveground pipe for WMA-II area

Opportunities

- Taylor Corp. is coordinating with manufacturers for production of carbon treatment shed and other project components

Weekly Update Meeting September 30, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 9/26/2015

Work completed week of September 21, 2015

- Golder is continuing to work with Taylor Corp. to prepare submittals and schedule

Work in progress for the week of September 28, 2015

- Reviewing submittals for pumping, piping and treatment systems
- Drums used for drilling water are currently empty; Taylor Corp. is scheduled to crush and disposed of drums in a roll-off once equipment is available

Work anticipated for the next two weeks

- Continue to develop and review submittals

Opportunities

- Taylor Corp. is coordinating with manufacturers for production of carbon treatment shed and other project components

Weekly Update Meeting October 7, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 10/3/2015

Work completed week of September 28, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals.

Work in progress for the week of October 5, 2015

- Two drums used to collect well development water have been disposed of in roll-off container. Remaining drums will be disposed when equipment is made available.
- Reviewing submittals for pumping, piping and treatment systems. Golder is preparing submittal package for review by Solutia.

Work anticipated for the next two weeks

- Golder plans to have first submittal package ready for review the week of October 12.
- Golder will coordinate with Taylor Corp. to prepare for mobilization to site. First construction activities will include surveying, installing E&S control, and installation of underground conveyance piping system.

Opportunities

- Golder and Taylor Corp. have conducted several conference calls and meetings for project coordination.

Weekly Update Meeting October 14, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 10/10/2015

Work completed week of October 5, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals.

Work in progress for the week of October 12, 2015

- Remaining drums will be disposed when equipment is made available.
- Golder and Taylor are compiling submittals for pumping, piping and treatment systems. Golder is preparing submittal package for review by Solutia.

Work anticipated for the next two weeks

- Golder will coordinate with Taylor Corp. to prepare for mobilization to site. First construction activities will include surveying, installing E&S control, and installation of underground conveyance piping system.

Opportunities

- Golder and Taylor Corp. have conducted several conference calls and meetings for project coordination.

Weekly Update Meeting October 21, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 10/10/2015

Work completed week of October 12, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals.

Work in progress for the week of October 19, 2015

- Golder has sent Solutia a submittal package for products and materials proposed for the construction or modification of the belowground portions of the groundwater extractions system.
- Golder has also sent Solutia a submittal schedule for review.

Work anticipated for the next two weeks

- Separate submittals are being prepared for the aboveground work.

Opportunities

- Golder and Taylor Corp. have conducted several conference calls and meetings for project coordination.

Weekly Update Meeting October 28, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 10/24/2015

Work completed week of October 19, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals.
- Golder has sent Solutia a submittal package for products and materials proposed for the construction or modification of the belowground portions of the groundwater extractions system.

Work in progress for the week of October 26, 2015

- Solutia has approved the belowground portions of the groundwater submittals.
- Continue working with Taylor on aboveground portions of the submittals.

Work anticipated for the next two weeks

- Separate submittals are being prepared for the aboveground work.

Opportunities

- Golder and Taylor Corp. have conducted several conference calls and meetings for project coordination.

Weekly Update Meeting November 4, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 10/31/2015

Work completed week of October 26, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals.

Work in progress for the week of November 9, 2015

- Continue working with Taylor on aboveground portions of the submittals. Will submit Carbon Treatment Enclosure submittal this week.

Work anticipated for the next two weeks

- Separate submittals are being prepared for the aboveground work.

Opportunities

Weekly Update Meeting November 11, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 11/07/2015

Work completed week of November 2, 2015

- Golder is continuing to work with Taylor Corp to prepare submittals.
- Golder has released Taylor Corporation to proceed with procuring the following items: pre-cast concrete carbon treatment system enclosures, HDPE and PVC piping materials, PVC valves, flowmeters, pre-cast well and flow meter vaults, dense graded aggregate (DGA) materials, and temporary erosion and control devices.

Work in progress for the week of November 9, 2015

- Continue working with Taylor on aboveground portions of the submittals.
- Golder currently is preparing submittals for the following items: submersible well pumps and controls, carbon treatment system absorption units, electrical materials, and metal ladder tray system for supporting the elevated HDPE conveyance pipe in WMA II area.

Work anticipated for the next two weeks

- Separate submittals are being prepared for the aboveground work.

Opportunities

Weekly Update Meeting November 18, 2015

Weekly Update Meeting December 9, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 225 safe hours worked on site through Saturday 12/05/2015

Work completed week of November 30, 2015

- Golder continued to work with Taylor Corp to prepare submittals.

Work in progress for the week of December 7, 2015

- Taylor plans to determine depth of current piping at the South Landfill flow meter vaults.
- Golder has currently submitted all construction submittals with the exception of electrical materials.

Work anticipated for the next two weeks

- Mobilize to the site over the next two weeks to conduct survey and set up for initial field activities.
- Initiate work on non-RA groundwater system upgrades. Installation of ladder tray and flow meter vaults.

Opportunities

- Submitted connection information to Anniston Sewer and Water Board to finalize connection permit for treated groundwater discharge.

Weekly Update Meeting December 16, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 261 safe hours worked on site through Saturday 12/12/2015

Work completed week of December 7, 2015

- Taylor excavated several locations to locate existing piping for vault tie ins.

Work in progress for the week of December 14, 2015

- Taylor plans to determine depth of current piping at the South Landfill flow meter vaults.
- Golder has currently submitted all construction submittals with the exception of electrical materials.

Work anticipated for the next two weeks

- Mobilize to the site over the next week; set up for initial field activities.
- Initiate work on non-RA groundwater system upgrades. Installation of ladder tray and flow meter vaults.

Opportunities

- Submitted connection information to Anniston Sewer and Water Board to finalize connection permit for treated groundwater discharge.

Weekly Update Meeting December 22, 2015

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 340 safe hours worked on site through Saturday 12/19/2015

Work completed week of December 14, 2015

- The aluminum pipe rack was delivered to site on Dec 17; installation began on Dec 18.
- Location of existing groundwater piping system initiated.

Work in progress for the week of December 21, 2015

- Taylor continues to install pipe rack.
- Golder is coordinating with Taylor for the order and delivery of pumps, controllers, and carbon treatment system.

Work anticipated for the next two weeks upon return

- Continue work on non-RA groundwater system upgrades – pipe rack system.

Opportunities

- Mechanical work for the Groundwater Project is not severely affected by rain events so will continue to work on these components as weather delays are expected.
- Will be off after December 22 in observation of Christmas Holidays and will resume on January 4.

Weekly Update Meeting January 13, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 660 safe hours worked on site through Saturday 1/9/2016

Work completed week of January 4, 2016

- Installation of aluminum pipe rack.
- Pipe was secured to pipe rack using U-bolt clamps.

Work in progress for the week of January 11, 2016

- Finish securing of pipe with U-bolts.
- Delivery of prefabricated enclosure for carbon treatment drums is scheduled for 1/15.

Work anticipated for the next two weeks

- Delivery and installation of carbon treatment enclosures.
- Dig trench and assemble well-head for conveyance piping.

Weekly Update Meeting January 20, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 744 safe hours worked on site through Saturday 1/16/2016
- New subcontractor (Littleton) has gone through orientation and background check process

Work completed week of January 11, 2016

- Taylor prepped the foundation for carbon treatment enclosure at IW-26 and IW-27. Electrical conduit and HDPE were stubbed out for connection between enclosure and wells.
- On 1/15/2015 Taylor installed carbon treatment enclosure.

Work in progress for the week of January 18, 2016

- Installation of well vaults at IW-26 and IW-27.
- Run electrical conduit and conveyance pipe between wells and enclosure.

Work anticipated for the next two weeks

- Assemble well-heads at IW-26 and IW-27.
- Trench and install conveyance piping between enclosure and AWWSB tie-in point.

Weekly Update Meeting January 27, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 845 safe hours worked on site through Saturday 1/23/2016

Work completed week of January 18, 2016

- Taylor began trenching and laying conduit/conveyance pipe between the carbon treatment enclosure and IW-26 and IW-27 well vaults. Trenches are being lined with geotextile marker layer and backfilled with clean soil.

Work in progress for the week of January 25, 2016

- Trench and extend conveyance piping from enclosure to AWWSB tie-in

Work anticipated for the next two weeks

- Assemble well-heads at IW-26 and IW-27.
- Continue trenching and installing conveyance piping between enclosure and AWWSB tie-in point.

Weekly Update Meeting February 3, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 1,005 safe hours worked on site through Saturday 1/30/2016

Work completed week of January 25, 2016

- Taylor continued to trench and lay conduit/conveyance pipe between the carbon treatment enclosure and AWWSB tie-in. Trenches are being lined with geotextile marker layer and backfilled with clean soil;
- Installed concrete flow meter vault at IW-14.

Work in progress for the week of February 1, 2016

- Complete installation of conveyance piping from enclosure to AWWSB tie-in;
- Install carbon treatment vessels and piping within enclosure.

Work anticipated for the next two weeks

- Assemble well-heads at IW-26 and IW-27;
- Pressure test conveyance pipe;
- Complete piping within carbon treatment enclosure.

Weekly Update Meeting February 10, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 1,200 safe hours worked on site through Saturday 2/06/2016

Work completed week of February 1, 2016

- Conveyance piping was installed up to the AWWSB tie-in point. Pipe is stubbed out and ready to be tapped into manhole;
- Installed carbon treatment vessels, valves, bag filter, pressure gauges, and piping within enclosure;

Work in progress for the week of February 8, 2016

- Locate and prepare conveyance piping for flow meter vaults at south landfill;

Work anticipated for the next two weeks

- Assemble well-heads at IW-26 and IW-27;
- Pressure test conveyance pipe at IW-26 and IW-27;

Weekly Update Meeting February 16, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 1,340 safe hours worked on site through Saturday 2/13/2016

Work completed week of February 8, 2016

- Locate and prepare conveyance piping for flow meter vaults at south landfill, and conduct flow tests in conveyance lines (non-RA work);

Work in progress for the week of February 15, 2016

- Pressure test conveyance piping for flow meter vaults at south landfill (non-RA work);

Work anticipated for the next two weeks

- Assemble well-heads at IW-26 and IW-27;
- Pressure test conveyance pipe at IW-26 and IW-27;

Weekly Update Meeting February 24, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 1,640 safe hours worked on site through Saturday 2/20/2016

Work completed week of February 15, 2016

- Implemented an interim system to collect groundwater from SWMU-1. Frac tanks have been mobilized to site for temporary storage and conveyance piping is discharging directly into tanks (non-RA work);

Work in progress for the week of February 22, 2016

- Assemble pumps and well-heads at IW-26 and IW-27;
- Coordinate with hauling company to transport water from the temporary frac tanks to the facility's wet well (non-RA work).

Work anticipated for the next two weeks

- Install butterfly valves within six interceptor wells, and Basin 5 & 6 discharges, as part of system upgrades (non-RA work);
- Begin implementing upgrades to the SWMU-1 system (non-RA work).

Weekly Update Meeting March 2, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 1,860 safe hours worked on site through Saturday 2/27/2016

Work completed week of February 22, 2016

- The interceptor well system with temporary frac tanks was brought online for storage of groundwater at SWMU 1 (non-RA work);
- Assembled pumps and well-heads at IW-26 and IW-27

Work in progress for the week of February 29, 2016

- Conduct pressure test of conveyance piping at IW-26 and IW-27;
- Install outlet valves at Basins 5 and 6 (non-RA work);
- Install flow control valves and brackets in 24-inch wells at WMA II (non-RA work);

Work anticipated for the next two weeks

- Connect conveyance pipe to POTW tie-in at IW-26 and IW-27;
- Construct well modifications in Area A and E to allow for cover construction;

Weekly Update Meeting March 9, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,090 safe hours worked on site through Saturday 2/27/2016

Work completed week of February 29, 2016

- Installed flow control valves and brackets in 24-inch wells at WMA II (non-RA work);
- Installed outlet valves at Basins 5 and 6 (non-RA work);

Work in progress for the week of March 7, 2016

- Completed and passed pressure test of conveyance piping at IW-26 and IW-27 (test was conducted on system of lines connecting pumps, running inside carbon treatment system, and discharging to POTW tie-in);
- Construct well modifications on 2-inch wells in Area A and Area E to allow for geomembrane and soil cover placement;

Work anticipated for the next two weeks

- Connect conveyance pipe to POTW tie-in at IW-26 and IW-27;

Weekly Update Meeting March 16, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,221.5 safe hours worked on site through Saturday 3/12/2016

Work completed week of March 7, 2016

- Completed and passed pressure test of conveyance piping at IW-26 and IW-27 (test was conducted on system of lines connecting pumps, running inside carbon treatment system, and discharging to POTW tie-in);
- Constructed well modifications on 2-inch wells in Area A and Area E to allow for geomembrane and soil cover placement;
- Installed new wiring for IW wells IW-16 through IW-21, with the exception of IW-20 (non-RA work); and
- Installed wiring for water level sensors in IW-26 and IW-27.

Work in progress for the week of March 14, 2016

- Complete new wiring for IW wells IW-16 through IW-21, with the exception of IW-20 (non-RA work);
- Connect power to the carbon treatment system at IW-26 and IW-27; and
- Install water level sensors in IW-26 and IW-27.

Work anticipated for the next two weeks

- Prepare design for submittal to the EPA regarding plans to address the seep area.

Weekly Update Meeting March 23, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,231.5 safe hours worked on site through Saturday 3/19/2016

Work completed week of March 14, 2016

- Completed new wiring for IW wells IW-16 through IW-21 (non-RA work); and
- Installed inlet valve on existing piping adjacent to Tank T-100 (non-RA work).

Work in progress for the week of March 21, 2016

- Prepare design for submittal to the EPA regarding plans to address the seep area.

Work anticipated for the next two weeks

- Connect power to the carbon treatment system at IW-26 and IW-27;
- Startup and commissioning of CTS at IW-26 and IW-27; and
- Prepare design for submittal to the EPA regarding plans to address the seep area.

Weekly Update Meeting March 30, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,231.5 safe hours worked on site through Saturday 3/26/2016

Work completed week of March 21, 2016

- Started design for submittal to the EPA regarding plans to address the seep area.

Work in progress for the week of March 28, 2016

- Continue design for submittal to the EPA regarding plans to address the seep area.

Work anticipated for the next two weeks

- Connect power to the carbon treatment system (CTS) at IW-26 and IW-27; and
- Startup and commissioning of CTS at IW-26 and IW-27;

Weekly Update Meeting April 6th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,234.5 safe hours worked on site through Saturday 4/2/2016

Work completed week of March 28, 2016

- Continued design for submittal to the EPA regarding plans to address the seep area.
- Connected power to the carbon treatment system (CTS) at IW-26 and IW-27.

Work in progress for the week of April 4th, 2016

- Startup and commissioning of CTS at IW-26 and IW-27;

Work anticipated for the next two weeks

- Submit design of the seep area to the EPA for review and approval.

Weekly Update Meeting April 13th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,376.5 safe hours worked on site through Friday 4/8/2016

Work completed week of Aril 4th, 2016

- Continued design for submittal to the EPA regarding plans to address the seep area.
- Startup and commissioning of CTS at IW-26 and IW-27.

Work in progress for the week of April 11th, 2016

- Continue design for submittal to the EPA regarding plans to address the seep area.

Work anticipated for the next two weeks

- Submit design of the seep area to the EPA for review and approval.

Weekly Update Meeting April 20th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,399 safe hours worked on site through Sunday 4/17/2016

Work completed week of Aril 11th, 2016

- Installed 3-inch groundwater pipe at north end of Area A.
- Continued design for submittal to the EPA regarding plans to address the seep area.

Work in progress for the week of April 18th, 2016

- Continue design for submittal to the EPA regarding plans to address the seep area.

Work anticipated for the next two weeks

- Submit design of the seep area to the EPA for review and approval.
- Install groundwater pipe along eastern section of Area A.

Weekly Update Meeting April 27th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- 2,399 safe hours worked on site through Sunday 4/24/2016

Work completed week of Aril 18th, 2016

- Finished draft submittal for SWMU1 Modifications

Work in progress for the week of April 25th, 2016

- Address comments to the draft SWMU1 Modification submittal.

Work anticipated for the next two weeks

- Submit SWMU1 Modification packet to the EPA for review and approval.
- Install groundwater piping along eastern section of Area A.

Weekly Update Meeting May 4th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- **2,419** safe hours worked on site through Sunday 5/01/2016.

Work completed week of Aril 25th, 2016

- Placed groundwater piping and electrical conduit on top of liner on eastern section of Area A.

Work in progress for the week of May 2nd , 2016

- Complete installation of piping in Area A.
- Pressure test Area A piping before covering with Soil.
- Address comments to SWMU1 Modification packet.

Work anticipated for the next two weeks

- Submit SWMU1 Modification packet to the EPA for review and approval.

Weekly Update Meeting May 11th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- **2,439** safe hours worked on site through Sunday 5/08/2016.

Work completed week of May 2nd, 2016

- Finished Placing groundwater piping and electrical conduit on top of liner on eastern section of Area A.

Work in progress for the week of May 9th , 2016

- Installing IW vaults at IW 28 and IW 29.
- Addressing comments to SWMU1 Modification packet.

Work anticipated for the next two weeks

- Pressure test piping in Area A.
- IW well head completions.
- Submit SWMU1 Modification packet to the EPA for review and approval.

Weekly Update Meeting May 18th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- **2,516** safe hours worked on site through Sunday 5/15/2016.

Work completed week of May 9th, 2016

- Installed IW vaults at IW 28 and IW 29.
- Finished placing groundwater piping and electrical conduit in Area A.
- Addressed comments to SWMU1 Modification packet.

Work in progress for the week of May 16th, 2016

- Submitted SWMU1 Modification packet to the EPA for review and approval.
- Building compacted DGA pad for CTS in Area A.

Work anticipated for the next two weeks

- Submit ALDOT permit application for SWMU 1 conveyance (non-RA work).

Weekly Update Meeting May 25th, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- **2,600.5** safe hours worked on site through Sunday 5/22/2016.

Work completed week of May 16th, 2016

- Submitted SWMU1 Modification packet to the EPA for review and approval
- Prepared compacted DGA pad for CTS enclosure in Area A
- Permit application submitted to ALDOT

Work in progress for the week of May 23rd, 2016

- Set CTS enclosure on DGA pad in Area A
- Finish installing vaults in Area A
- Follow up on ALDOT permit application

Work anticipated for the next two weeks

- Follow up on ALDOT permit application if required

Weekly Update Meeting June 1st, 2016

Project: OU-3 Remediation – Groundwater Components

Owner: Pharmacia LLC/ Solutia Inc.

Contractor: Golder Associates

Health and Safety

- **2,773** safe hours worked on site through Sunday 5/29/2016.

Work completed week of May 23rd, 2016

- Set CTS enclosure in Area A
- Finished installing vaults in Area A
- Formed and poured the well pads in Areas A and E.

Work in progress for the week of May 31st, 2016

- Follow up on ALDOT and City of Anniston permit applications

Work anticipated for the next two weeks

- Follow up on permit applications
- Work on design criteria document for submittal to EPA

CBMPP INSPECTION FIELD REPORT LOG

Contractor Name: Taylor Corp
Site Name: OU-3 Remedial Action Specific Area: PCB CELL / AREA E
Site Location (City, County. State): Anniston, Calhoun County. Alabama

Date: 10/27/15

Weather Conditions: Temp. Min 54° Max 62°
Description (Sunny, Cloudy, Overcast, etc): RAIN
Precipitation: .19 Inches

Work Performed Today (Indicate location and description of work performed and note any safety issues or deviations from the H&S plan):

~~CONTINUED DEVELOPING AND EXCAVATION OF BORROW AREA FILL TO BE LEFT ON PCB CELL INSTALLING LINER & COMPOSITE~~ DID NOT WORK ON PCB CELLS OR BA.
CONTINUED WORK ON AREA A + E

	Yes	No
BMP maintenance and inspection:		
a) Inspection of engineering controls performed (ea. week and after rainfall)?	☑	☐
b) Attach weekly inspection forms (BMP and stormwater forms)?	☑	☐
c) Note any correction of defects below?	☑	☐
d) Weekly stormwater form?	☑	☐

Comments: BMPS IN GOOD CONDITION, NO DISCHARGE OR DAMAGE APPARENT.
AREA'S AROUND PCB CELLS GOOD NO DAMAGE
DISCHARGE PIPE ON WEST SIDE OF BORROW AREA CLEAR
INSPECTED BY JASON JOINER AND TYLER WOLLIS

Dust maintenance and monitoring: 1). mg/m³
2). mg/m³

Specific Area: Borrow Area, PCB Cell, C+D
Date: 11-21-15

Weather Conditions: Temp: Min 44° Max 68°
Description (Sunny, Cloudy, Overcast, etc) Sunny
Precipitation: 0.00 Inches

Work Performed Today (Indicate location and description of work performed and note any safety issues or deviations from the H&S plan):

Borrow Area - Screened Dirt, Hauled Soil to PCB Cells
PCB Cells - Received Soil, Spread as needed / Put More Mulch Down
C+D -

BMP maintenance and inspection:

	Yes	No
a) Inspection of engineering controls performed (ea. week and after rainfall)?	☑	☐
b) Attach weekly inspection forms (BMP and stormwater forms)?	☑	☐
c) Note any correction of defects below?	☑	☐
d) Weekly stormwater form?	☑	☐

Comments: No damage or discharge. BMPs in good condition. Repair made as needed.

Dust maintenance and monitoring: None used
Water truck used for dust suppression on as need bases
(note if dust suppression is applied)

STORMWATER INSPECITON AND MAINTENANCE REPORT FORM

Site Name: Anniston PCB Site, OU-3 Remedial Action Cover Systems

Site Location: Anniston, Calhoun County, Alabama

NPDES Permit Number: Not Applicable

Weekly Rainfall Summary:

Day:	Sun	Mon	Tues	Wed	Thurs	Fri	Sat
Date:	7/10/16	7/11/16	7/12/16	7/13/16	7/14/16	7/15/16	7/16/16
Rainfall:	1.01	T	T	Ø	T	Ø	T

Sampling Information:

- **Sample Type:**
- **Location:** N/A
- **Analysis:**

Inspection Results:

- **Deficiencies or Required Maintenance:** BMPS WERE DAMAGED IN 3 AREAS, DUE TO STRONG RAINSTORM THAT DIDN'T LAST ALL DAY BUT HIGH VELOCITY WINDS ALONG WITH RAIN CAUSED BLOWOUTS AND DISCHARGE (clean)
- **Planned Corrective Action:** ORDERED NEW MATERIAL FOR DEFICIENT AREAS
- **Corrective Action Schedule:** BMPS WERE ALL FIXED BY 7/15/16 BUT STARTED ON 7/13/16.
- **Other Comments:** Built up BMPS, doubled up in some areas for reinforcement due to BMP being on a downhill road that would recieve the most force if major rain event.

Contractor Name: Taylor Corp
Site Name: OU-3 Remedial Action Specific Area: Borrow Area, Area E
Site Location (City, County, State): Anniston, Calhoun County, Alabama

Date: 7/13/16 **Weather Conditions:** Temp: Min 68 Max 92°
Description (Sunny, Cloudy, Overcast, etc) Cloudy / Sunny
Precipitation: 0.00 Inches

Work Performed Today (Indicate location and description of work performed and note any safety issues or deviations from the H&S plan):

Borrow Area - Continuation of Backfill of the Pit to desired Depth For Completion.
Area E Wall Continued to be worked on until Finalization of Wall to Specs or Code.

	Yes	No
BMP maintenance and inspection:		
a) Inspection of engineering controls performed (ea. week and after rainfall)?	☑	☐
b) Attach weekly inspection forms (BMP and stormwater forms)?	☑	☐
c) Note any correction of defects below?	☑	☐
d) Weekly stormwater form?	☑	☐

Comments: BMPs have been damaged on Chidesdale Road, Road Alongside Area A, also over the Manhole drains East of Area A towards the Plant.

Materials were brought onsite and all areas have been Filled and upgraded for Stronger Resistance due to downhill drainage in some areas.

* During or after Rains no TC personnel are working in Area A or on the Road West of Area A Specifically by the Swing Gate. But BMPs have been moved due to grant Cutting of Fence Also on that Road have been possibly damaged due to driving over them. This is why Heavy Mitigation Presence was done to those Areas to prevent Sinkings of Fence Discharge that May not be clean.

Dust maintenance and monitoring: None
Water Source Used to Control Dust as Needed.

(note if dust suppression is applied)

CBMPP INSPECTION FIELD REPORT LOG

Contractor Name: Taylor Corp
Site Name: OU-3 Remedial Action Specific Area: Borrow Area / Area E
Site Location (City, County, State): Anniston, Calhoun County, Alabama

Date: 7/14/16 **Weather Conditions:** Temp: Min 68° Max 94°
Description (Sunny, Cloudy, Overcast, etc) Sunny / Clear
Precipitation: T Inches

Work Performed Today (Indicate location and description of work performed and note any safety issues or deviations from the H&S plan):

Borrow Area continues to be backfilled until desired depth is met.
Area E - Wall is still being worked on to smooth grade for the desired specs

	Yes	No
BMP maintenance and inspection:		
a) Inspection of engineering controls performed (ea. week and after rainfall)?	☑	☐
b) Attach weekly inspection forms (BMP and stormwater forms)?	☑	☐
c) Note any correction of defects below?	☑	☐
d) Weekly stormwater form?	☑	☐

Comments: BMPs were fixed as others were checked for structural damage that could possibly cause any discharge. More waddles were placed in areas that needed them for stronger support from heavy rains / thunderstorms with high velocity of wind as well.

Dust maintenance and monitoring:

Water source used as needed to maintain dust control.

d) Weekly stormwater form?	☑	☐

Comments: CAME IN DEC 3 2016 AND LOOKED AT REMAINING BMPS, PART OF SILT FENCE DOWN IN BORROW SOURCE, LOOKED LIKE SOMEONE PUT NEW WATTLES AND MORE SANDBAGS BY NORTH SIDE GATE. FEW WEEKS PRIOR I WAS TOLD TO REMOVE BMPS OFF 7th ST. THAT COULD HAVE HELPED WITH ANY BLOWOUT OR DISCHARGE FROM NORTH SIDE GATE. BMPs AT PCB CELLS ALONG SIDE TREELINE CAN BE REMOVED DUE TO THE TALL GRASS AND BRUSH THAT HAS GROWN OR LEFT IN PLACE.

APPENDIX X

AIR MONITORING DATA REPORTS

DUST MONITORING SUMMARY

July 2015

This table is a summary of all the time weighted average values exceeding the given threshold for the month of July 2015, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
1	15-Jul-2015	10:58:22	0.870
1	15-Jul-2015	11:02:22	0.916
1	15-Jul-2015	11:06:22	0.915
2	22-Jul-2015	11:44:32	0.224
2	22-Jul-2015	11:48:32	0.235
2	22-Jul-2015	12:56:32	0.595
2	22-Jul-2015	13:00:32	1.202
2	22-Jul-2015	13:04:32	1.804
2	22-Jul-2015	13:08:32	1.805
2	22-Jul-2015	13:12:32	1.754
2	22-Jul-2015	13:16:32	1.319
2	22-Jul-2015	13:20:32	0.729
2	22-Jul-2015	13:24:32	0.169
2	27-Jul-2015	15:31:38	0.181
2	27-Jul-2015	15:35:38	0.225
2	27-Jul-2015	15:39:38	0.223

DUST MONITORING SUMMARY

August 2015

This table is a summary of all the time weighted average values exceeding the given threshold for the month of August 2015, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
1	28-Aug-2015	08:58:28	0.233
1	28-Aug-2015	09:02:28	0.233
3	28-Aug-2015	09:29:44	0.151
3	28-Aug-2015	09:33:44	0.206

DUST MONITORING SUMMARY

October 2015

This table is a summary of all the time weighted average values exceeding the given threshold for the month of October 2015, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
1	20-Oct-2015	13:21:29	0.315
1	20-Oct-2015	13:25:29	0.315
1	20-Oct-2015	13:29:29	0.343
1	21-Oct-2015	11:50:06	0.219
1	21-Oct-2015	11:54:06	0.226
1	21-Oct-2015	11:58:06	0.226
1	23-Oct-2015	07:56:56	0.280

DUST MONITORING SUMMARY

November 2015

This table is a summary of all the time weighted average values exceeding the given threshold for the month of November 2015, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
No exceedances were recorded for this month.			

DUST MONITORING SUMMARY

December 2015

This table is a summary of all the time weighted average values exceeding the given threshold for the month of December 2015, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
No exceedances were recorded for this month.			

DUST MONITORING SUMMARY

January 2016

This table is a summary of all the time weighted average values exceeding the given threshold for the month of January 2016, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
No exceedances were recorded for this month.			

DUST MONITORING SUMMARY

February 2016

This table is a summary of all the time weighted average values exceeding the given threshold for the month of February 2016, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	Value (mg/m^3)
2	11-Feb-2016	10:52:40	0.514
2	11-Feb-2016	10:56:40	0.523

DUST MONITORING SUMMARY

April 2016

This table is a summary of all the time weighted average values exceeding the given threshold for the month of April 2016, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
1	8-Apr-2016	09:12:56	0.181
1	8-Apr-2016	09:16:56	0.189
2	8-Apr-2016	09:12:56	0.181
2	8-Apr-2016	09:16:56	0.189
3	11-Apr-2016	13:27:50	0.157

DUST MONITORING SUMMARY

May 2016

This table is a summary of all the time weighted average values exceeding the given threshold for the month of May 2016, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
No exceedances were recorded for this month.			

DUST MONITORING SUMMARY

June 2016

This table is a summary of all the time weighted average values exceeding the given threshold for the month of June 2016, for all three dust monitors.

Threshold: 0.15 (mg/m^3)

Monitor	Date	Time	TWA (mg/m^3)
1	23-Jun-2016	20:33:48	0.160
1	23-Jun-2016	20:37:48	0.238

Site Safety Audit

MEMORANDUM

TO: Ms. E. Gayle Macolly, Solutia Inc. November 5, 2015

FR: Charles Haury, Golder Associates Inc.

RE: SITE SAFETY AUDIT – OCTOBER 14 AND 15 (ANNISTON, ALABAMA)

Golder Associates Inc. (Golder) prepared this memorandum to summarize the findings of our Site Safety Audit (Audit) performed for the Operable Unit 3 (OU-3) Remedial Action (RA) Cover Systems Project. The audit was performed on October 14 and 15, 2015 with a closing meeting to present our findings on the morning of October 15, 2015.

INTRODUCTION

Taylor Corporation (Taylor) with their subcontractor, Brown Construction and Development, LLC (Brown) are performing a variety of civil construction tasks in support of the RA Cover Systems Project. The goal of the audit was twofold, first to observe the contractors performing their assigned tasks and second to review the implementation of Taylor's overall safety program. Along with field observations, Golder interviewed Mr. Jason Joiner, Taylor's safety manager.

The audit was performed in a manner to foster technical exchange and promote improvement of the safety culture. Hazards identified should be abated and implementation of the provided recommendations will enhance the safety program.

FIELD OBSERVATIONS

Brown

- Signage – Signs included on the barrels surrounding the work area near the administration building indicate that the area is an exclusion zone with permission required to enter. It was observed that personnel, including myself were not challenged when the area was entered. This should be changed to a normal construction area (enter with caution) or upgraded to meet hazardous waste exclusion zone criteria.
- Impalement hazards – Rebar was unprotected in many areas of the work area, including a walkway in and out of Area E.
- Fire hazard – Fuels for concrete saws were in use without nearby fire extinguishers. A fire extinguisher was produced upon request that was fully spent. Another had no record of inspection.
- Flexible cords – Cords were not marked to indicate inclusion in an assured grounding program.
- PPE – Several team members did not have Hi-Vis clothing and believed that its use was optional.
- Tools – A broken claw hammer was observed to be in use at the site.

Taylor

- Heavy equipment – The loader in the soil screening operation did not have a working back-up alarm.

- Heavy equipment – A loader with a fork attachment was used to unload the geocomposite rolls. This required workers to climb on the loaded truck, work at height and manually shift many of the rolls. Several rolls fell from the truck. A better solution would be to use a Load-All or similar piece of equipment with a single bar attachment that could remove all rolls from ground level.

Discussion with Jason Joiner

- Field operations – Jason needs to spend the majority of his day out in the operations to be visible, available and promoting the safety culture. Taylor management should ensure that other, non-safety related tasks are performed by others.
- Taylor should consider implementing a daily Job Safety Analysis (JSA) done jointly with the foreman and crew.
- Taylor should ensure that tools are marked to indicate inclusion in an assured grounding program.
- Heavy equipment – All heavy equipment needs to be inspected daily and the inspection recorded.
- Safety meetings – Meetings need to include all subcontractors to enhance the team culture and ensure the flow down of all safety program elements.
- Traffic management – Improvement of traffic management is critical to prevent a major incident. Stop signs, warning signals, and police presence are all options for both on and offsite roads. This should be a common theme for meetings and promotional signage.

All of the site personnel were fully supportive of my activities. Please let me know if you have questions or if more information is necessary.

APPENDIX Z2

Post-Cleanup Inspection and Examination of Incident Site

MEMORANDUM TO FILE

Date: November 17, 2015

To: File Company: Solutia, Inc.

From: R.S. Williams & Associates

Cc: Mr. John Loper, Mr. Mike Price, Mr. Donn Williams

RE: POST CLEAN-UP INSPECTION AND EXAMINATION OF INCIDENT SITE

On Tuesday, November 17, 2015, a physical inspection of the incident site involving an overturned articulating off-road dump truck operated by Taylor Corporation was conducted to determine effectiveness of the cleanup activity and to evaluate physical evidence of any potential residual environmental impacts from the incident which occurred on Monday morning, November 16, 2015.

Seven locations were randomly selected at the incident site biased toward residual accumulation potential and hand excavated to approximately six inches of native soil and examined for physical evidence of diesel fuel. The entry and exit points to the culvert pipe under the gravel roadway immediately down gradient of the incident site were also examined in the same manner. No detections of diesel fuel or other environmental impacts were determined by observation of physical evidence.

All possible drainage and migration pathways to waterways were inspected for physical evidence of visible sheen appearance and odor. These locations included both surface and piped sewer pathways from the catch basin energy dissipater down gradient of the incident site through the East Side Retention Basin and Tenth Street Dissipater discharge to the 11th Street / North Railroad Ditch which confluences with Snow Creek. No physical evidence was observed at any of the inspected locations to indicate any impact to waterways from the incident and potential for diesel fuel release. The promptness and efficiency of the clean-up appears to have been adequate to manage potential environmental impacts from the incident.

Jerry O. Hopper
R.S. Williams & Associates

NARRATIVE

Responded to a concern of smoke. Arrived on scene to find a large mulch pile burning in a construction area. There was a substantial fire brake around the pile and no hazards in the area. E-4 personnel did not extinguish fire. E-2 responded to the call first but stopped to assist a overturned tractor.

NARRATIVE

E2 responded to unauthorized burn. Incident occurred on Eastman property being cleared. All wood from felled trees were run through a wood chipper, chips were piled on Friday (09/04/2015) afternoon in a large cleared area, void of debris. Over the weekend the wood chips appeared to have produced enough heat through vegetative decomposition to ignite the wood chips sometime on Sunday (09/06/2015). When the work crew arrived at work site Tuesday (09/08/2015) the smoldering wood chips were discovered. Due to the fact the pile of wood chips was approximately seventy-five feet in diameter and twenty feet high, with approximately two feet of ash covering the pile, it was determined that the best course of action was to allow the wood chips to burn themselves out. The work crew had a one thousand gallon tanker available on site and were going to monitor the pile throughout the day. They were instructed to notify Anniston Fire Dept. if they should require assistance at anytime with the situation.
